I am a...

**Engineer**

Can't find a job? Browse the full list

Find out my automation risk > **33%**

3 © Earnix Ltd. Confidential & Proprietary.

3

## Automation in Insurance

Straight Through Underwriting

Customer Service Chatbots

Image Based Claim Settlement

But what about pricing?  
What is our transformative breakthrough?

4 © Earnix Ltd. Confidential & Proprietary.

4

# Agenda

- ⚡ Why now?
- ⚡ Which technology?
- ⚡ What process to automate?
- ⚡ Who does the work?
- ⚡ How do I get past the roadblocks?

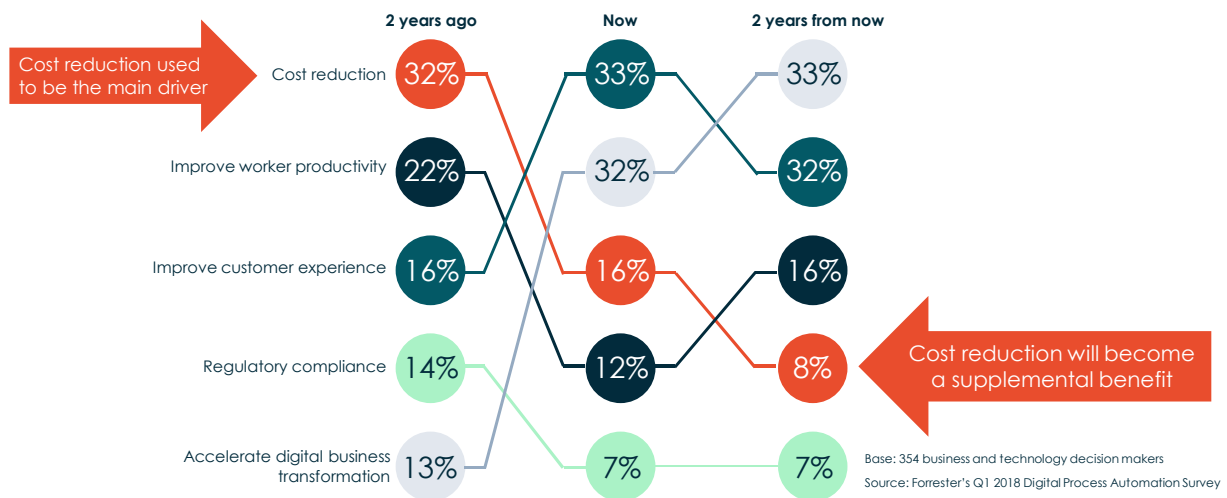

5 © Earnix Ltd. Confidential & Proprietary.

5

## Automation is more than just “cost savings”

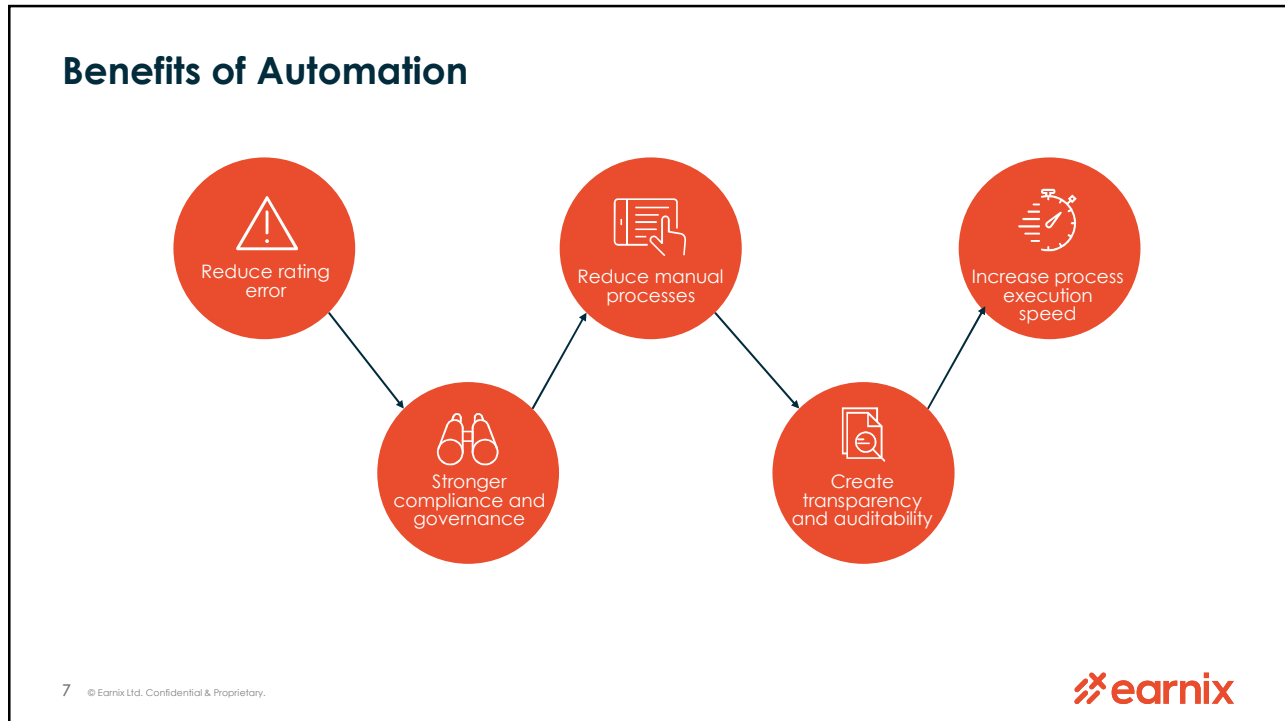

“What’s the primary focus of process improvement efforts for the time periods below?”

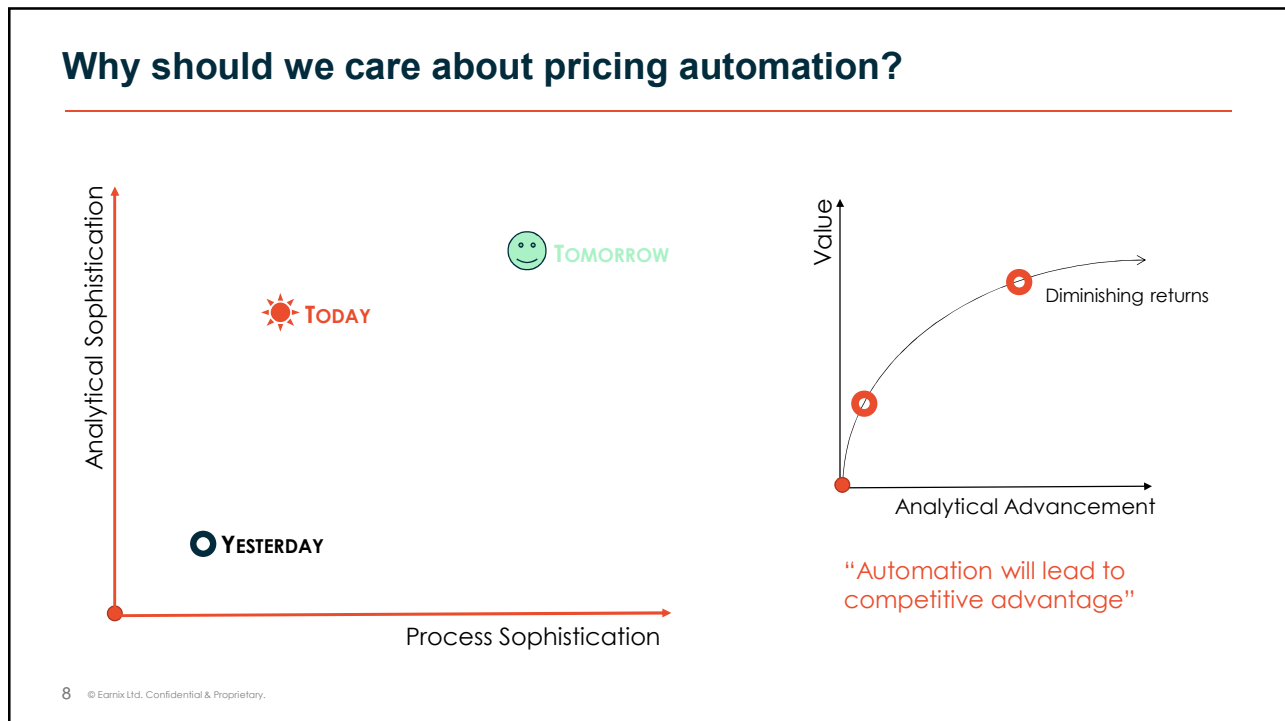

6 © Earnix Ltd. Confidential & Proprietary.

6

7

8

9

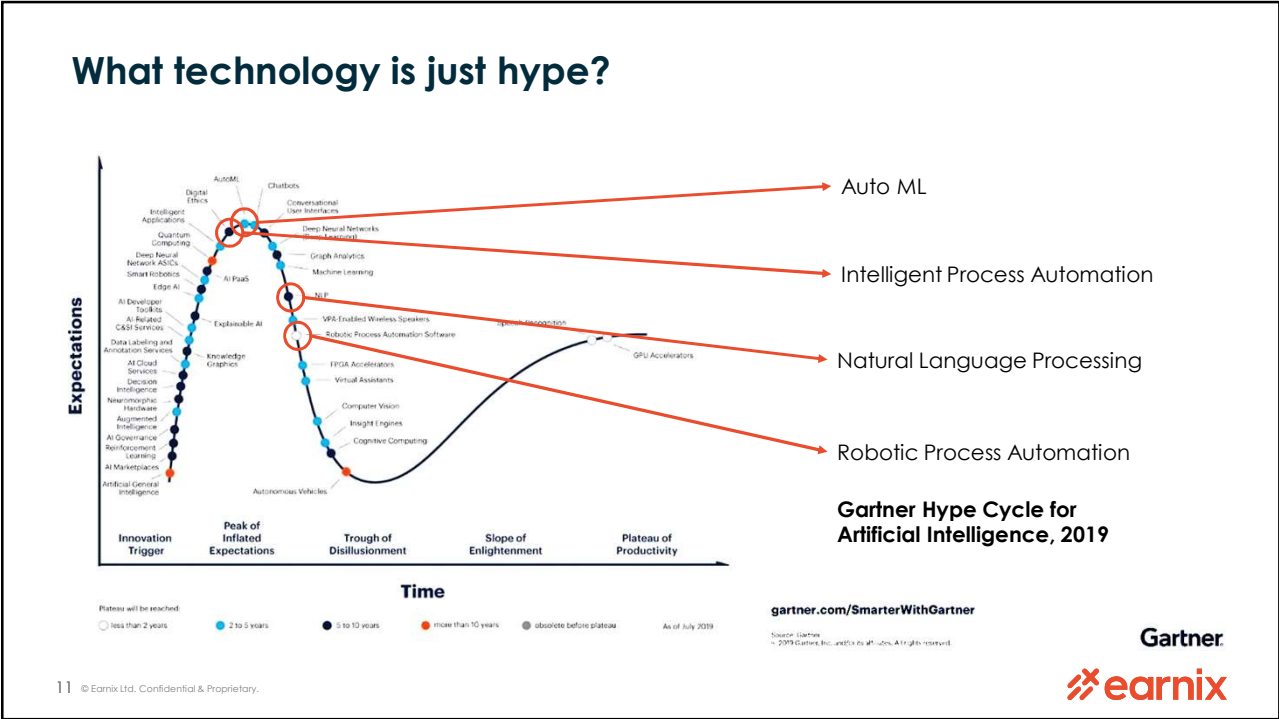

## Tools & Technology

| Tool    | Description  | Best Use   | Longevity/ Scope                 | Price    |
|---------|--|--|----------------------------------|----------|
| VBA     | Visual Basic for Applications (used for MS products)                     | Converting data in Excel to be ingested into a tool with a different format                    | Legacy technology                | \$       |
| SAS     | Full scope software suite with long history                              | Complex data transformations over large datasets   | Persistent, but declining        | \$\$\$\$ |
| Python  | Open source scripting language   | General purpose coding outside of core operating systems                                       | Rapid growth                     | \$       |
| RPA     | Robotic process automation   | Purely process automation to replace human "clicking". Good for legacy systems.                | Good adoption, maturing quickly  | \$\$     |
| IPA     | Intelligent process automation; combining RPA, NLP, and Machine Learning | Great at automating complex tasks that mimic human thought and have an automated feedback loop | Lot's of hype, not much adoption | \$\$\$   |
| Auto ML | Automated machine learning   | Fitting statistical models   | Slow growth                      | \$\$     |
| NLP     | Natural language processing  | Transitioning between language and code  | Losing momentum                  | \$\$     |

**No one tool can do everything. You need the right tool for the right job.**

10 © Earnix Ltd. Confidential & Proprietary.

10

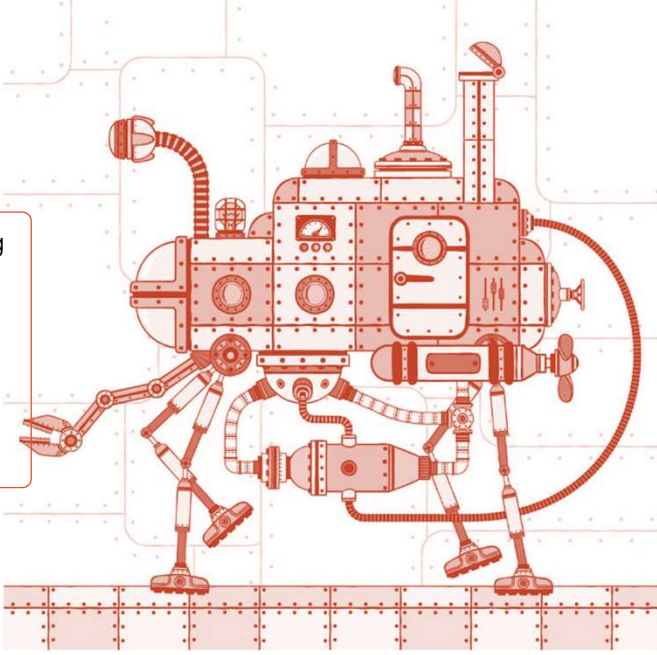

11

12

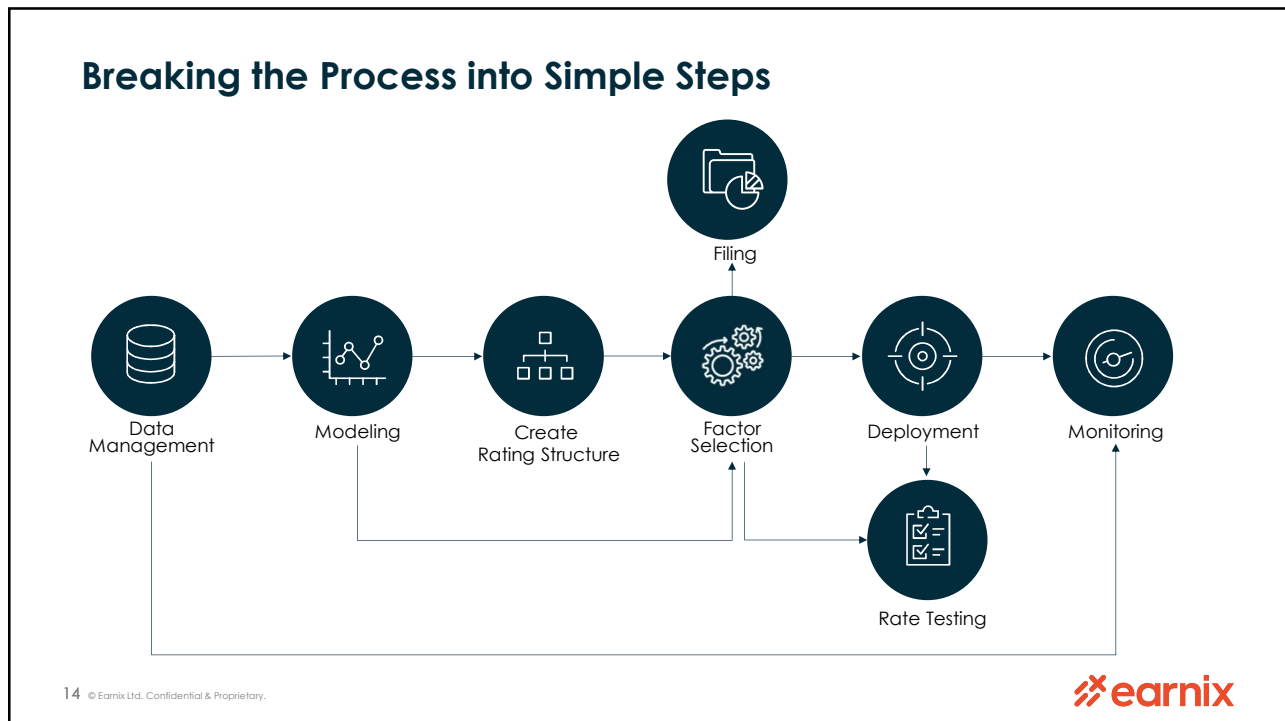

When you start automating your pricing process, will you like what you see?

If you don't love your process today, you are not going to love it tomorrow

13 © Earnix Ltd. Confidential & Proprietary.

13

14

## Poll Question

**How would you classify your overall pricing process?**

- Best in class; everything we want
- Great process, but could be modernized
- Very manual process; rates rebuilt multiple times
- Needs to be rebuild from the ground up

15 © Earnix Ltd. Confidential & Proprietary.

15

## Poll Question

**Over the next 5 years, what % of your current pricing process could be automated?**

- 0 – 10%
- 10 – 25%
- 25 – 50%
- 50 – 75%
- 75%+

16 © Earnix Ltd. Confidential & Proprietary.

16

## Poll Question

What is your number 1 challenge in the pricing process?

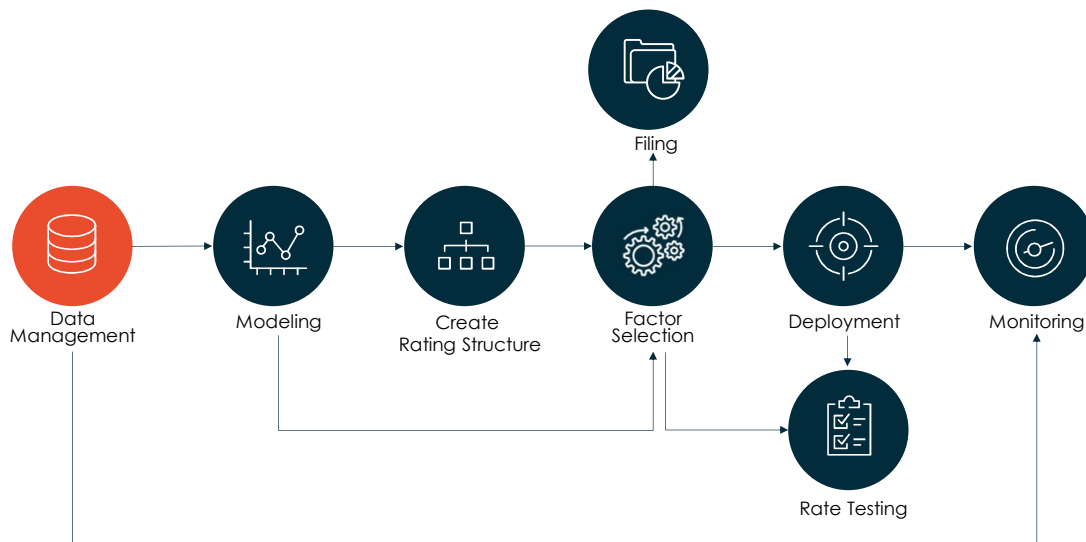

- Prone to rating errors
- Slow speed to market; processes
- Technology restrictions
- Translating models into rating structures
- Too many cooks in the kitchen; management

17 © Earnix Ltd. Confidential & Proprietary.

17

## Breaking the Process into Simple Steps

18 © Earnix Ltd. Confidential & Proprietary.

 earnix

18

## Internal vs. External Data

Is it easier to automate internal or external data?

19 © Earnix Ltd. Confidential & Proprietary.

earnix

19

## Working with Structured Data

- Bring analytical data closer to production data
- Data should be unified across the in force, quote, and testing datasets
- Many data processes are already automated, but there is much room for improvement

### Policy

| PH Age | Tenure | Postcode | Conversion Ind | Policy Number |
|--------|--------|----------|----------------|---------------|
| 41     | 5      | 5434561  | 1              | 1001          |

### Vehicle

| Type   | Model    | Sum-model | Year | Value | PoI Number | Veh Number |
|--------|----------|-----------|------|-------|------------|------------|
| Toyota | Corolla  | HB Hybrid | 2019 | 21000 | 10001      | 20001      |
| Ford   | Explorer | Limited   | 2016 | 15000 | 10001      | 20002      |

### Covers

| Cover Name | Cover num | Deductible | Vehicle Number |
|------------|-----------|------------|----------------|
| Casco      | 202       | 500        | 20001          |
| Legal      | 301       | 100        | 20001          |
| NCD        | 305       | -          | 20001          |
| P Casco    | 203       | 250        | 20002          |
| Breakdown  | 306       | 100        | 20002          |

### Driver

| Age | Gender | Convictions | Driver Number |
|-----|--------|-------------|---------------|
| 41  | F      | 0           | 1001          |
| 41  | M      | 0           | 1002          |
| 45  | F      | 1           | 1003          |

### Claims

| Type | Date       | Amount | Driver Number |
|------|------------|--------|---------------|
| PD   | 05/08/2018 | \$2300 | 1003          |

20 © Earnix Ltd. Confidential & Proprietary.

earnix

20

## Automating Data Management

### Actions to Automate

- Extraction | Standardization | Validation | Merge/append | Import/export

### Technology

- Python | SAS | SQL | Other commercial data tools

### Required Skills

- Data engineer

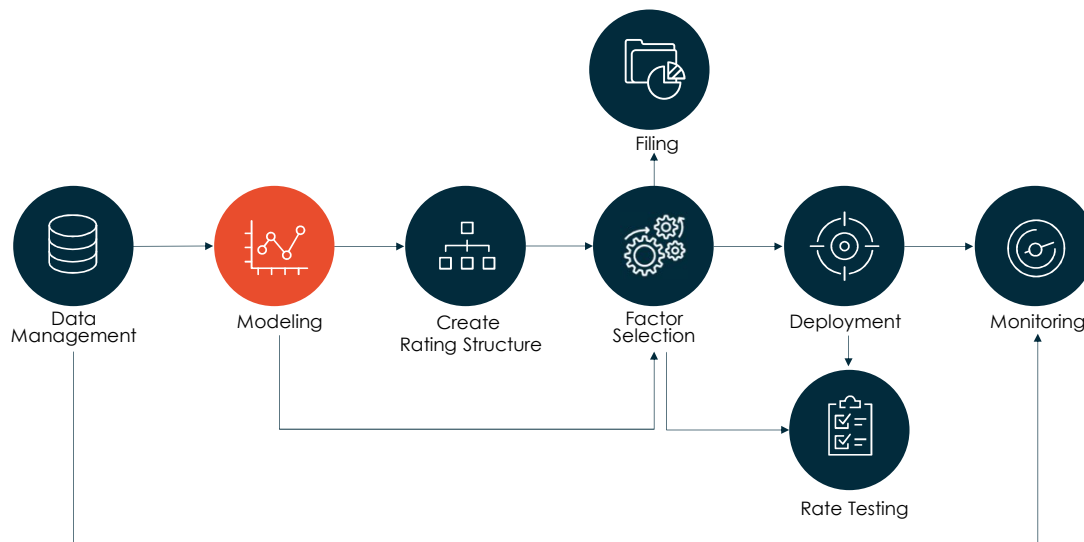

### Technical Notes

- Most important step of the automated pricing process
- Consolidate automation processes as much as possible
- Unify (standardize) all data required in the pricing process
- Strong partnership between IT and Actuarial

21 © Earnix Ltd. Confidential & Proprietary.

21

## Breaking the Process into Simple Steps

22 © Earnix Ltd. Confidential & Proprietary.

 earnix

22

## Models Used in Pricing

### Models to automate:

- Retention & mid-term cancelation (semi-annual update)
- New business conversion (quarterly update)
- Expense allocation (annual update)
- **Loss cost** (annual update)
  - Constrained models (include market & regulatory constraints)
  - Unconstrained models (true best estimate of loss)

**Can we use Machine Learning models for calculating premium?**

**Not a question of 'IF', but 'WHEN'**

## Automating Model Development

### Actions to Automate

- Refit with updated data | Identify new data elements | Adjust transformations  
Compare models

### Technology

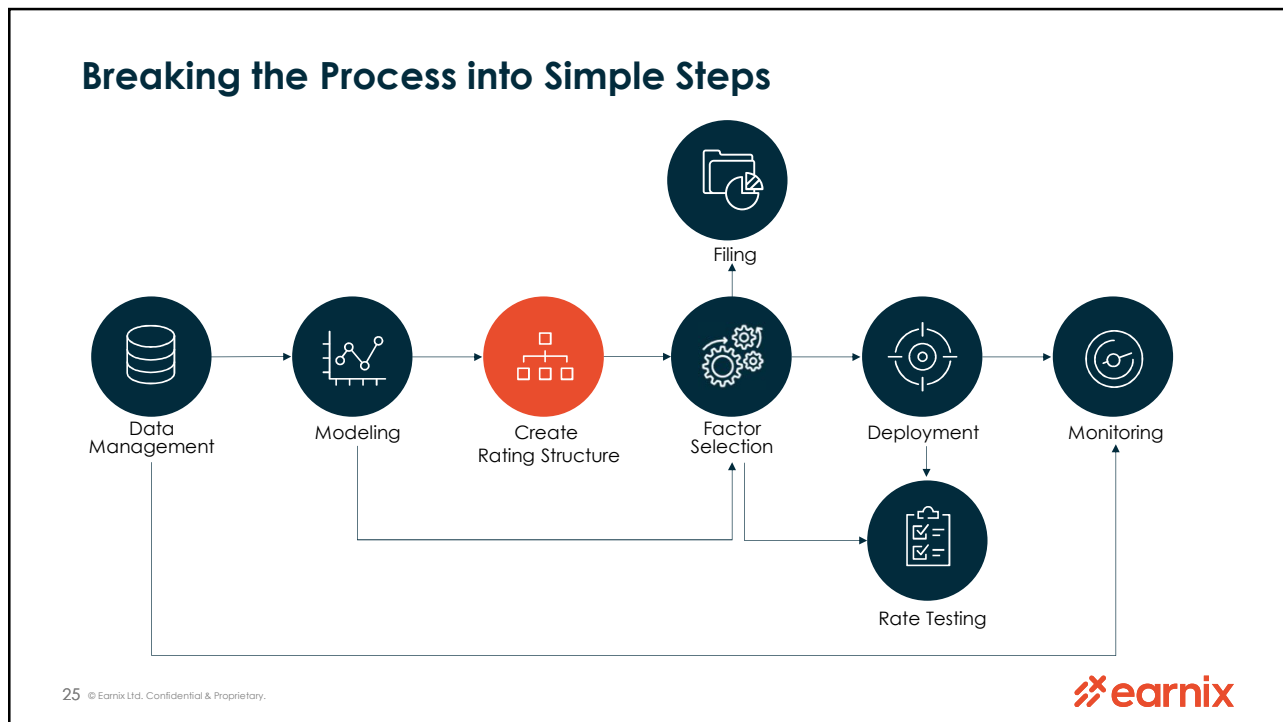

- Python | AutoML (DataRobot)

### Required Skills

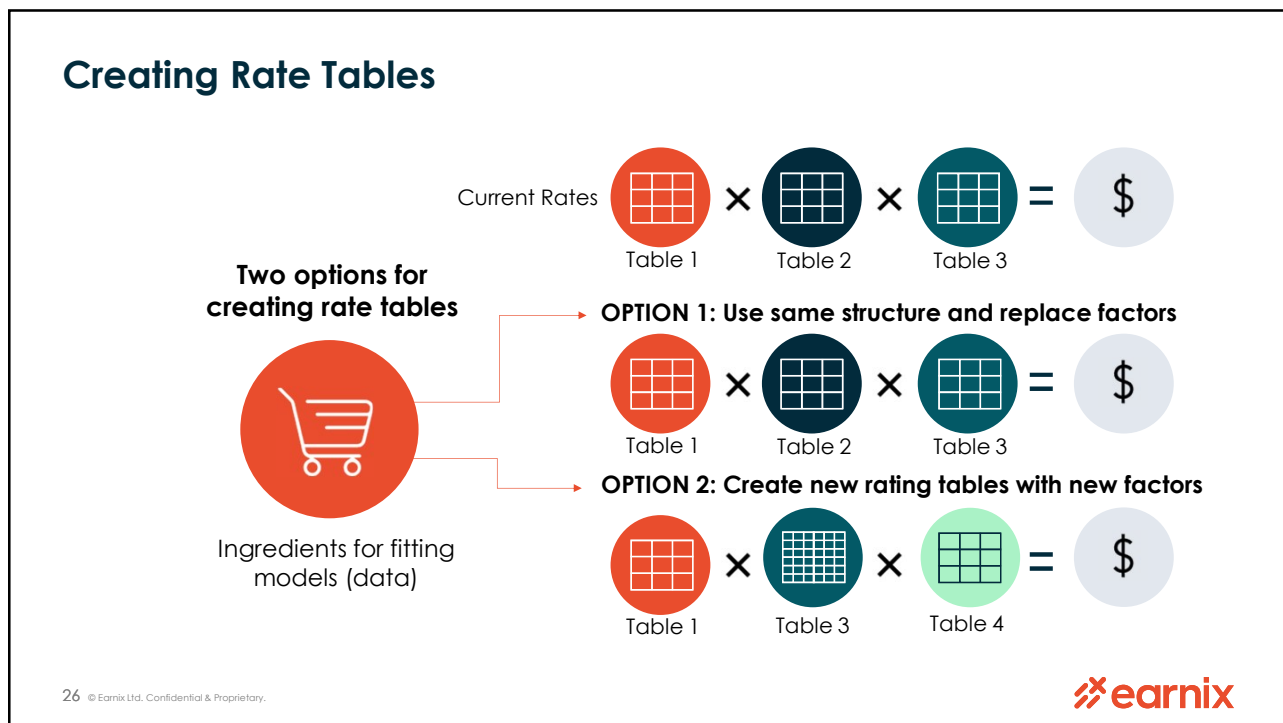

- Data scientist | Predictive modeler | Statistician

### Technical Notes

- Models should be created manually first
- Machine Learning always beats traditional GLMs – statistically speaking
- Just because we can build more complex models, does not always mean that we should
- Building models is easy; deploying them into production is much more difficult

25

26

## Automating Rating Structure Creation

### Actions to Automate

- Transform loss cost models | Group factors | Add tables outside GLM | Rerate data as audit

### Technology

- Python | AutoML | Specialized commercial software

### Required Skills

- Data scientist | Actuary | Product management

### Technical Notes

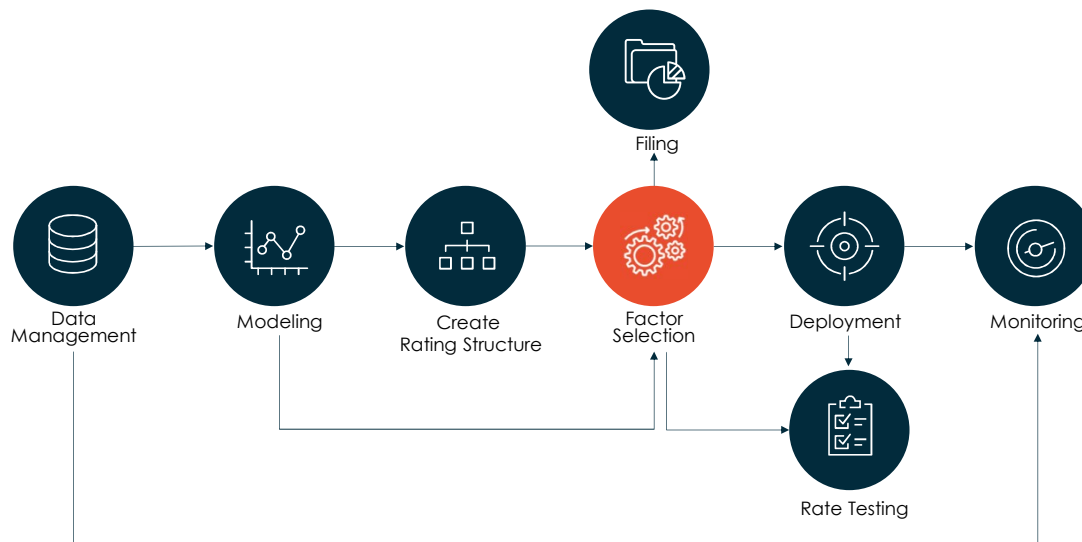

- The handoff today between R&D and pricing today is typically ugly
- Consider what steps in this process truly add value today
- Creating an overly complex rating structure to hide IP from competitors rarely works
- How the structure is created is a function of the rating engine flexibility

27 © Earnix Ltd. Confidential & Proprietary.

27

## Breaking the Process into Simple Steps

28 © Earnix Ltd. Confidential & Proprietary.

28

## Automated Factor Selection

| Var | Current | Indicated | Selected |
|-----|---------|-----------|----------|
| L1  | 1.00    | 1.00      | 1.00     |
| L2  | 1.10    | 1.21      | 1.15     |
| L3  | 1.25    | 1.38      | 1.32     |
| ... | ...     | ...       | ...      |

From current rate pages

From new loss models

### The automated factor selection process

Leverages the expected profitability and underlying expectation of customer demand

1. Define the objection function (business goal to maximize)
2. Define the global constraint (anchor)
3. Define individual factor level constraints (selected factor should be between current and indicated)
4. Define relationships between rating cells (monotonicity constraint)
5. Run algorithm to compute optimal factors that are compliant with regulation

29 © Earnix Ltd. Confidential & Proprietary.

29

## Automating Factor Selections

### Actions to Automate

- Adjust factors by considering market position, regulatory constraints, and customer demand

### Technology

- Python | Specialized commercial software (optimizer)

### Required Skills

- Actuarial | Product management

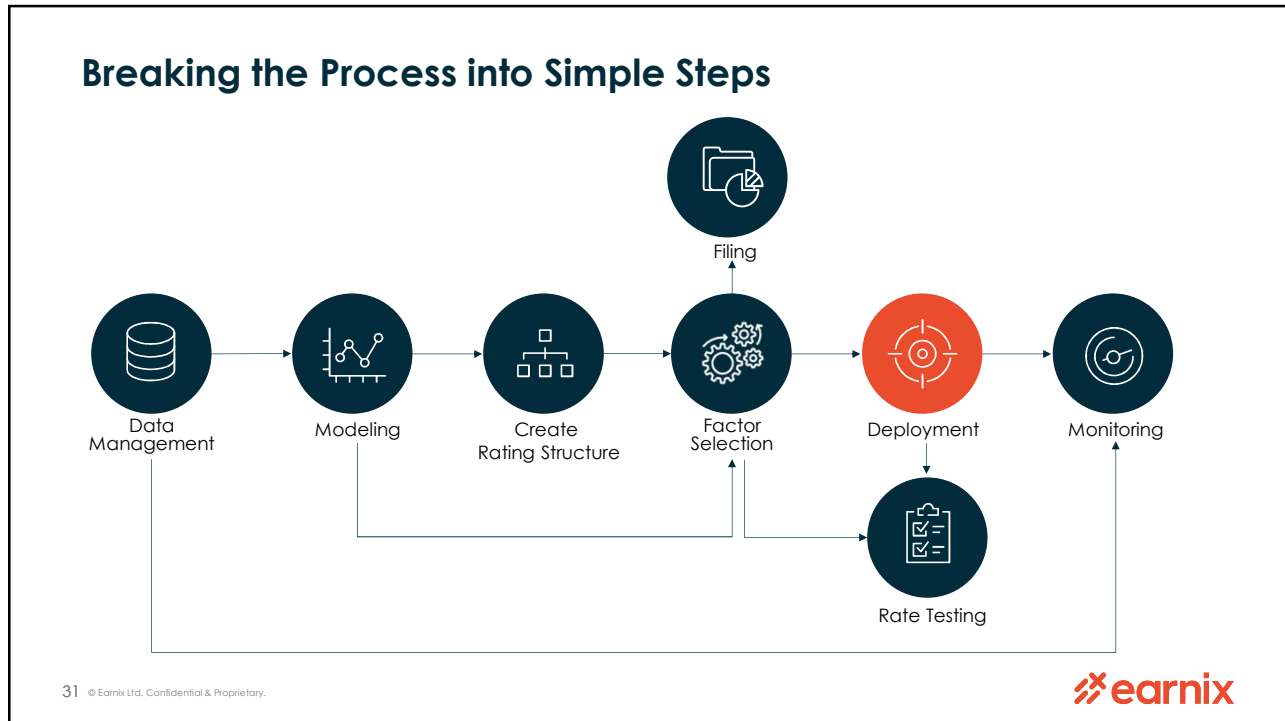

### Technical Notes

- Within predefined criteria, algorithm finds a factor combination that satisfies all constraints
- In practice, suggested factors are the starting point for human adjustment
- Selected factors should always be accompanied by KPI projections
- In the perfect process, the only input needed is the business objective (growth vs. profit)

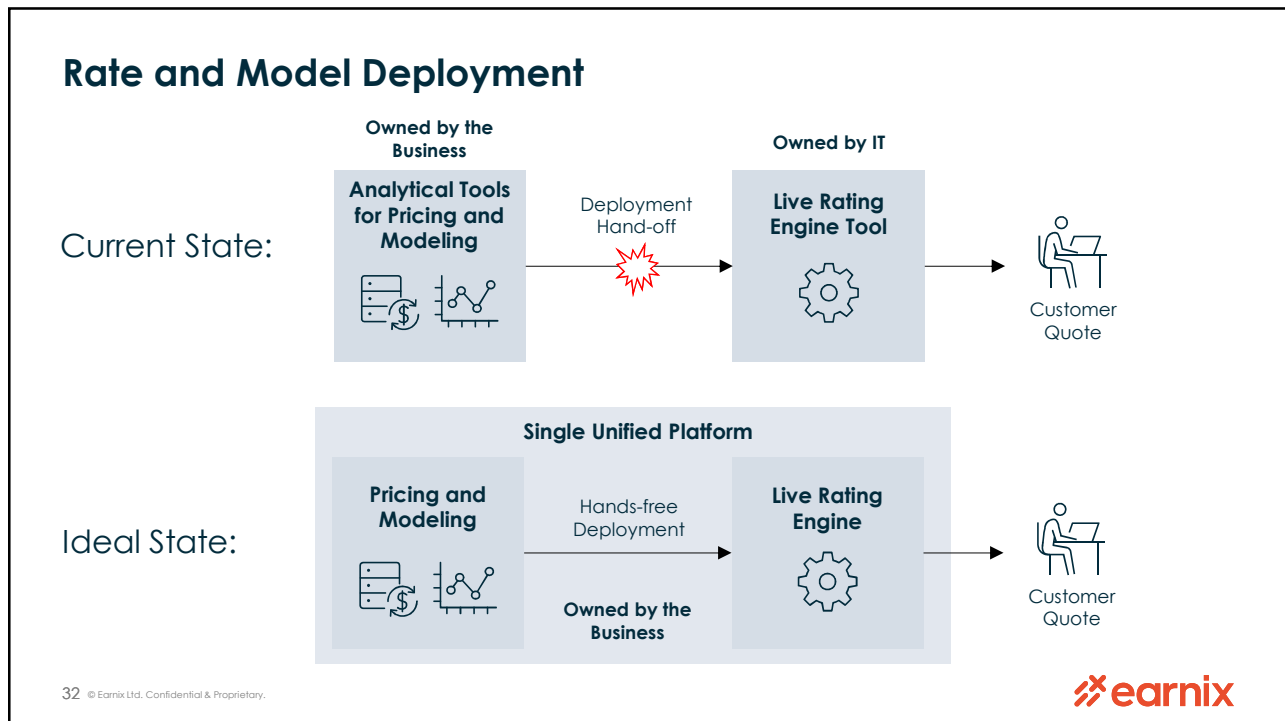

30 © Earnix Ltd. Confidential & Proprietary.

 earnix

30

31

32

## Automating Rate Deployment

### Actions to Automate

- Perform system checks | Request permissions | Implement rates into rating engine

### Technology

- Python | RPA

### Required Skills

- IT | Actuarial

### Technical Notes

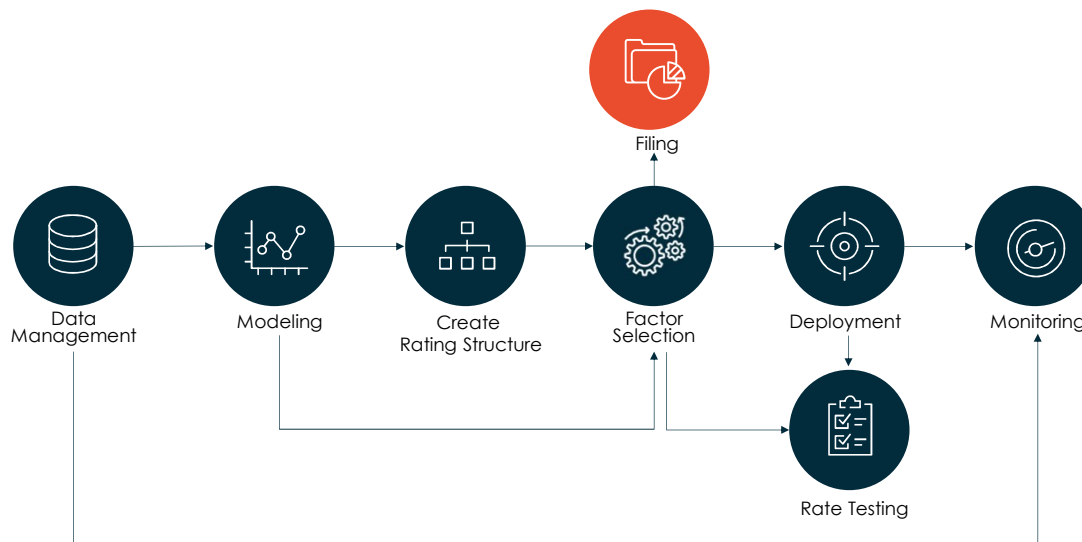

- This handoff is currently one of the largest bottlenecks in the pricing process
- Shifts responsibility from IT to business and allows greater speed to market (proactive vs reactive)
- Reduces deployment time from months or weeks to days or hours
- This is mission critical – no mistakes here

33 © Earnix Ltd. Confidential & Proprietary.

33

## Breaking the Process into Simple Steps

34 © Earnix Ltd. Confidential & Proprietary.

34

## Automating Rate Filing

### Actions to Automate

- Compile rate pages | document changes | Output current/indicated/selected factors | Submit filing

### Technology

- Python | NLP | VBA | RPA | IPA

### Required Skills

- Actuarial | Product management

### Technical Notes

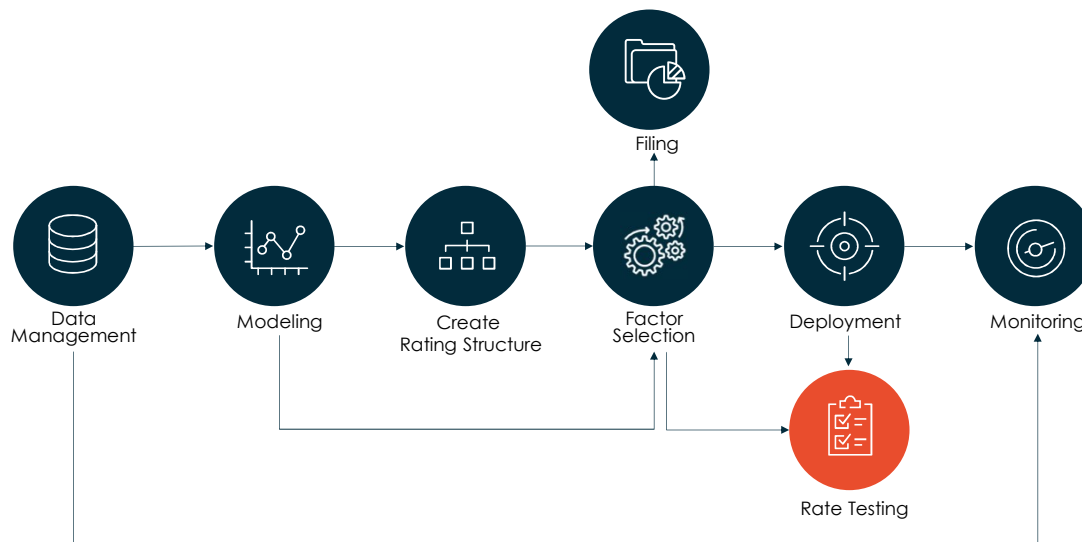

- Like all filings, it is a balance of how much vs. little to share – for automation, share more
- Be open with the regulators that you are focusing on automation; include them in the process
- Different states will have different templates (that's ok)
- How comfortable would you be to let IPA (using NLP) attempt to answer objections?

35 © Earnix Ltd. Confidential & Proprietary.

35

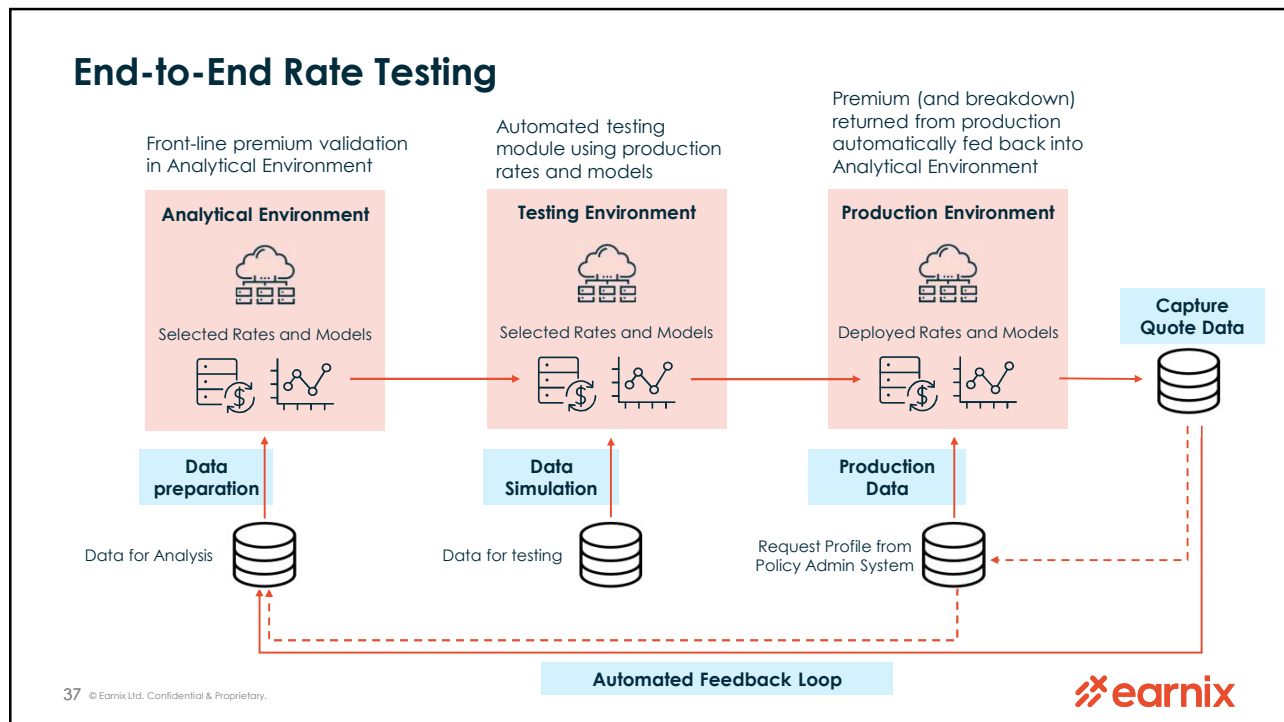

## Breaking the Process into Simple Steps

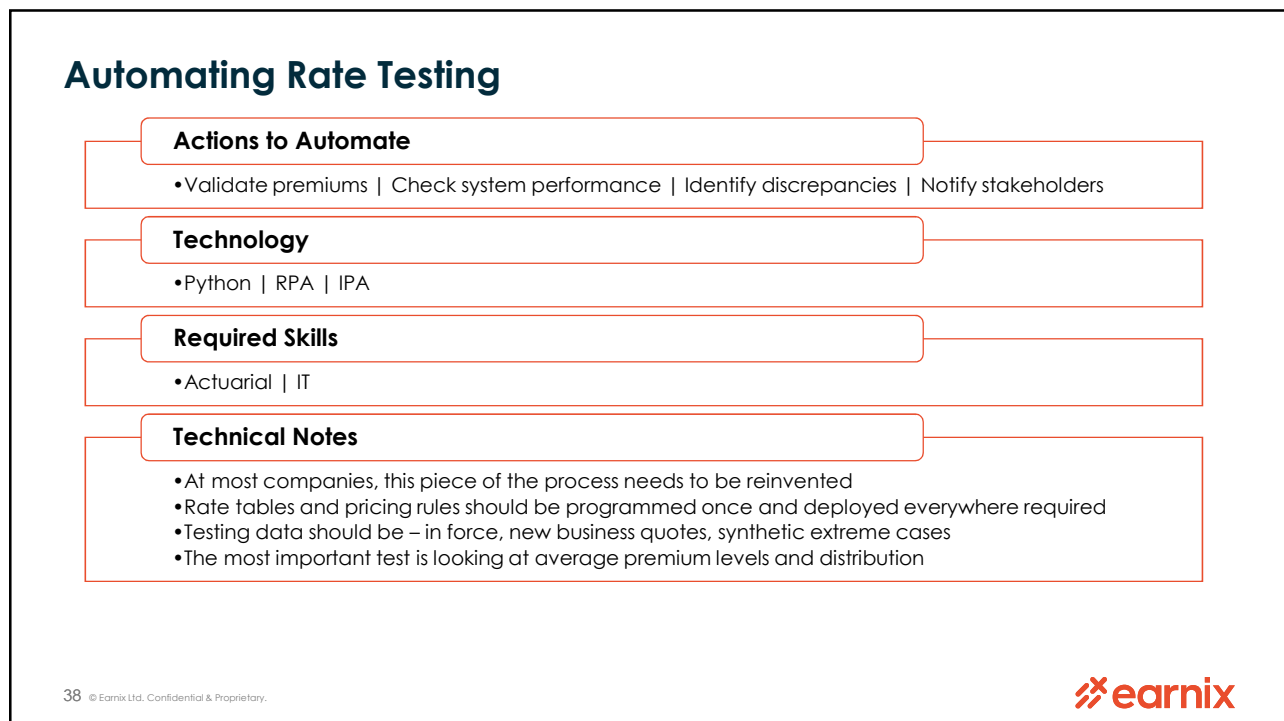

36 © Earnix Ltd. Confidential & Proprietary.

36

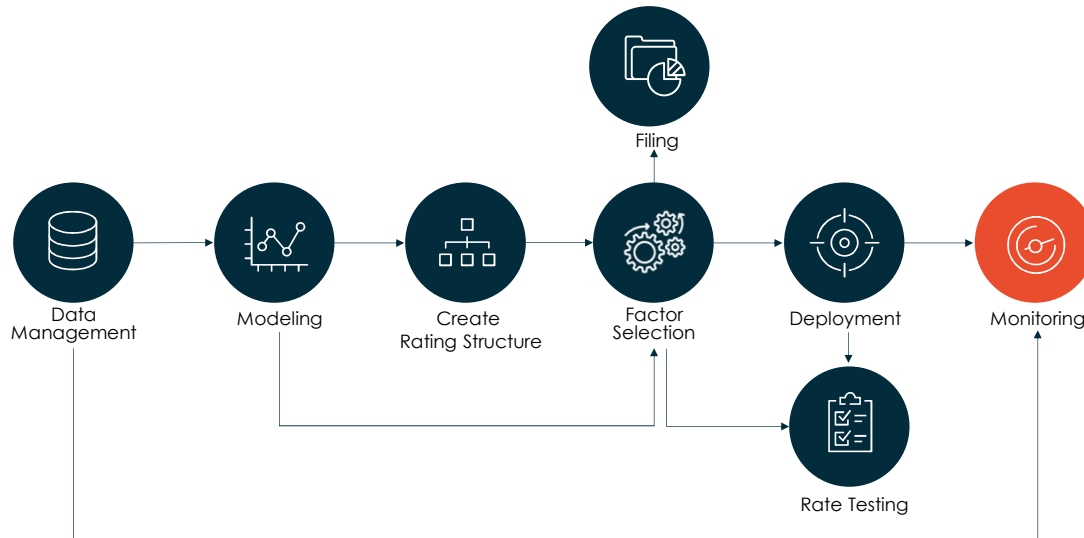

37

38

## Breaking the Process into Simple Steps

39 © Earnix Ltd. Confidential & Proprietary.

39

## Automating Monitoring

### Actions to Automate

- Rebalance data | Check predictive model accuracy | Notify stakeholders | Trigger corrective action

### Technology

- Python | SAS | SQL | IPA

### Required Skills

- Data engineering | Data science

### Technical Notes

- Overlooked step in many business processes – lots of talk with little action
- The first step is to create automated output for reporting
- Most challenging part of the process – lots of if/then scenarios
- Very few business processes are able to close the loop through complete process automation

40 © Earnix Ltd. Confidential & Proprietary.

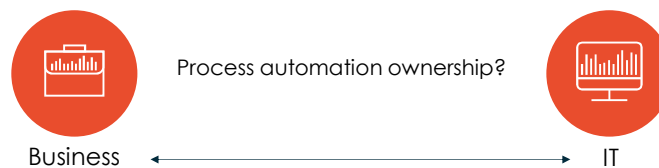

40

41

## Roles & Responsibilities

- **Management sponsor:** executive level setting the course
- **Process owner:** line of sight over the end-to-end pricing process
- **Project manager:** orchestrator keeping track of deliverables, resources, and timeline
- **Technical experts:**
  - **Business experts** – actuaries intimately familiar with the pricing process
  - **Data experts** – data engineers who know how to find the right data
  - **Technology experts** – know how to use automation tools

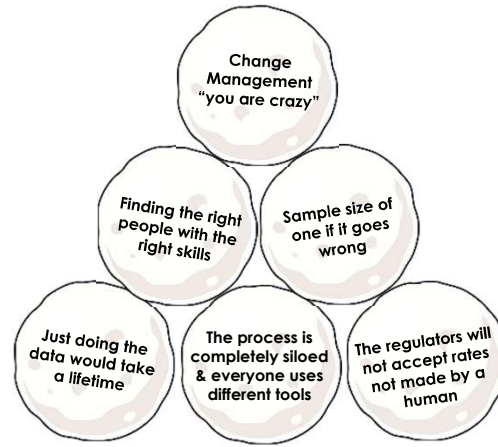

**Ideally you have more people doing the work than managing the work**

42

## Navigating the Challenges

**“When there are boulders, we can either chip away, go around, or blow them up!”**

TODAY —————> TOMORROW

43 © Earnix Ltd. Confidential & Proprietary.

43

## Key takeaways

Love the process before you automate it

Break the process down into bite-size pieces

Increase process execution speed

Stronger compliance and governance

Create transparency and auditability

Most importantly...

44 © Earnix Ltd. Confidential & Proprietary.

44

I am a...

Actuary

49

Agenda

- Introduction
- DigitLab
  - About Us
  - Desired Skillsets
  - Automation Projects

COUNTRY Financial 50

50

# Julia Hart

- Site Director, DigitaLab (3 years)
- Adjunct Faculty, University of Illinois School of Information Sciences
- University of Illinois Alumni (Masters & Doctorate)
- Previously Director of IT and Institutional Research
- Lived in Champaign, IL for 34 years!

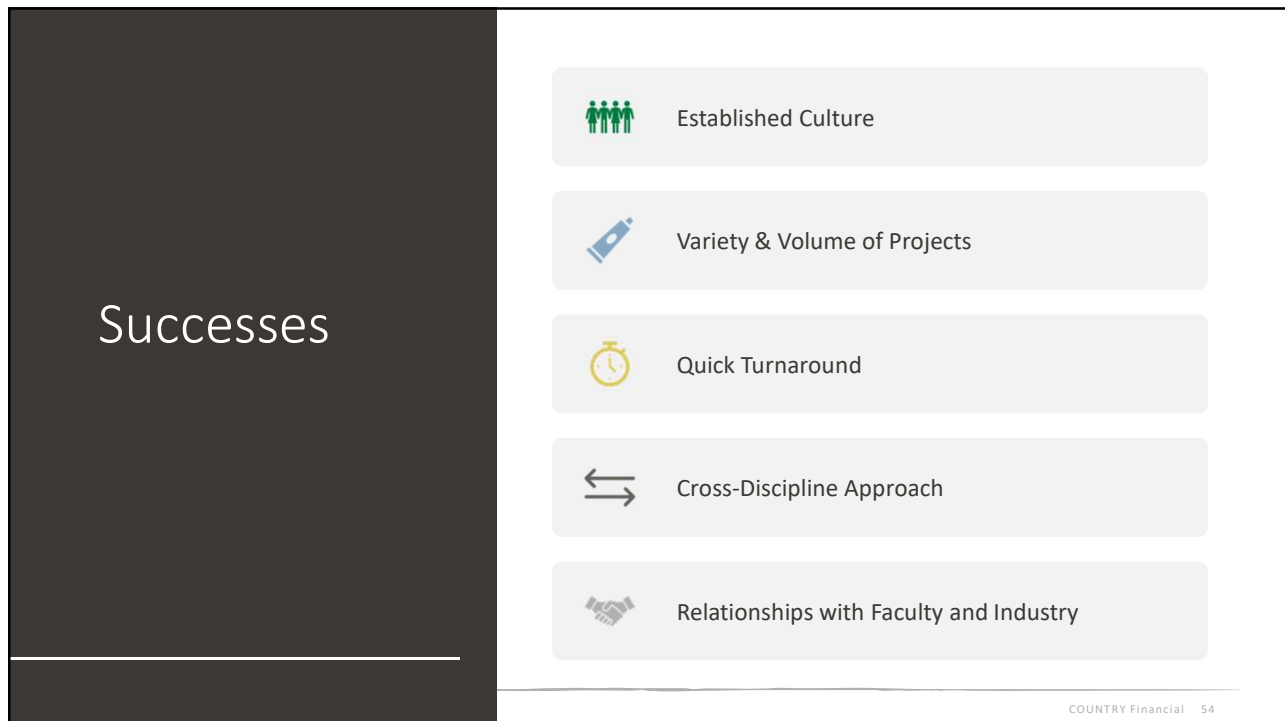

51

52

53

54

Challenges

- RESOURCES (FTE)
- TECHNOLOGY STACKS
- OPERATIONALIZING
- ACCESS TO DATA & TOOLS
- DELAY IN TIMELINES

55

University of Illinois Talent

COUNTRY Financial 56

56

## Skillsets

Out-of-the-box thinking

Emerging technologies

Agile methodologies

Ambition & Initiative

57

## Out-of-the Box Thinking

- Ability to learn domain-specific knowledge
  - At least have an interest
- Non-prescriptive
- Be creative!

“I assume all this playing will lead to innovation.”

58

## Latest Tech

- Data Science specific:
- Computational Skills
  - Programming Languages
  - Databases
  - Machine Learning
- Data Visualization
  - Storytelling
  - Interactive Dashboards
  - Analytical Reports

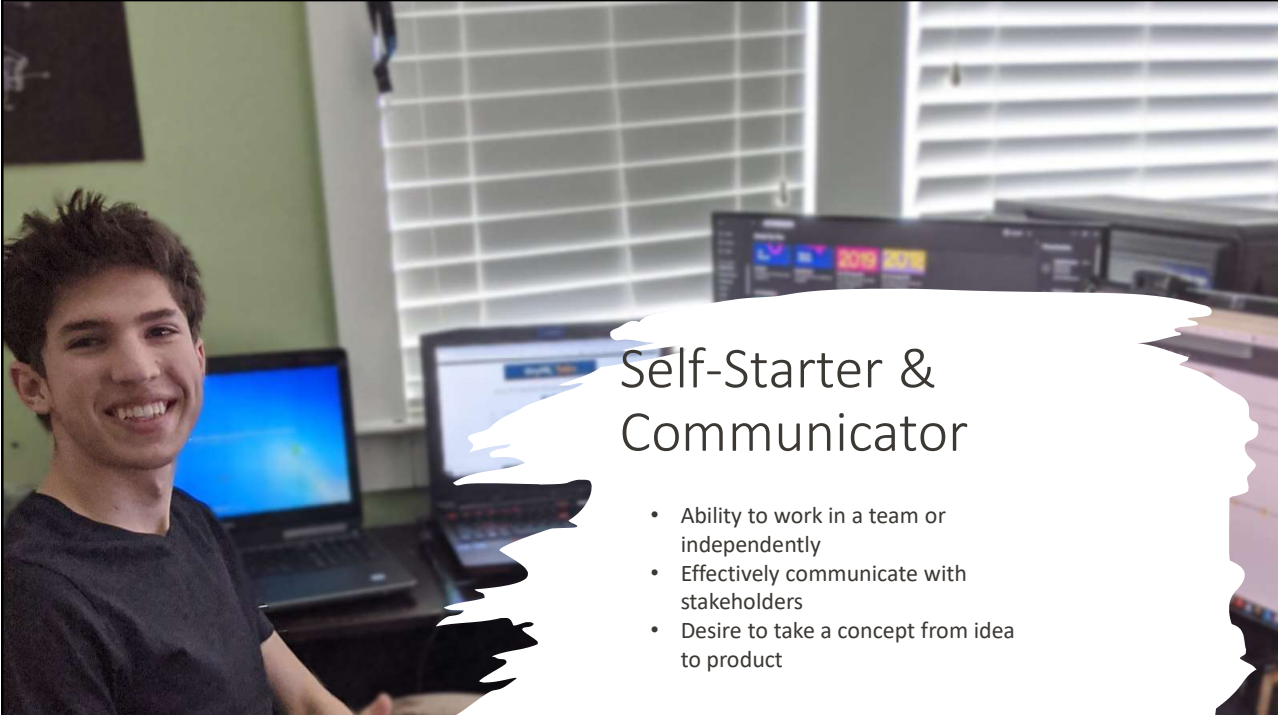

59

## Agile Approach

- Understanding various project management methods
  - Agile vs. Waterfall
  - Sprints
  - Tracking User Stories
- Adaptable to change

60

## Self-Starter & Communicator

- Ability to work in a team or independently
- Effectively communicate with stakeholders
- Desire to take a concept from idea to product

61

“ DigitaLab is a place of diversity, where we can fully utilize our creativity & what we’ve learned in classes to create some real value. It’s happy to see the tools we developed to be deployed in the production environment and used by COUNTRY. This feeling of being needed makes me love DigitaLab even more. ”

DigitaLab Intern, 2020

COUNTRY Financial 62

62

## Project Results

- Property Image Recognition
- Sentiment for Data Analysts
- Claims VOC App
- NLP to Query

63

## Property Image Recognition 2.0

- Google Cloud Vision API vs. Azure Cognitive Services
- Created an **automated** solution using historical images and claims data to assess risk of insuring a house

64

Sentiment  
for Data  
Analysts

No Data Science  
Background  
Needed!

- Easy-to-Use Web App
- Generates Predictive Model
- Predicts Text Sentiment  
(Specific Context)

65

## Claims VOC App

---

CLAIMS APPLICATION WAS AIMED AT  
**AUTOMATING** THE EVALUATION OF A  
CUSTOMER'S CLAIM EXPERIENCE

MACHINE LEARNING TECHNIQUE  
RANDOM FOREST WAS USED TO RANK  
FEATURES AFFECTING LOW EASE SCORES

INCLUSION OF REPORTS UNCOVERING  
DETAILS ABOUT CRUCIAL METRICS  
ENABLED QUICK EVALUATION AND  
ANALYSIS OF CLAIMS DATA

66

## NLP to Query

- Country Financial currently utilizes skilled employees having knowledge of Query Languages to answer basic questions asked by Business Users
- This project aims to create a robust system that is responsible for **automating** the process of answering questions by converting English sentences to SQL Queries
- The successful implementation of this project will make this entire process more efficient, less time-consuming and inexpensive.

Our Vision: To Enrich Lives in the Communities We Serve COUNTRY Financial 67
