

#### REINSURANCE CREDIT RISK: A MARKET-CONSISTENT PARADIGM FOR QUANTIFYING THE COST OF RISK

**CAS Annual Meeting** 

Minneapolis, November 5, 2013

Neil Bodoff, FCAS, MAAA

Executive Vice President, Willis Re

# Agenda

- Goal
- Background & motivation
- Proposed model
- Discussion: pros and cons
- Conclusion

#### Goal

 Propose a new approach to managing reinsurance credit risk

Quantify

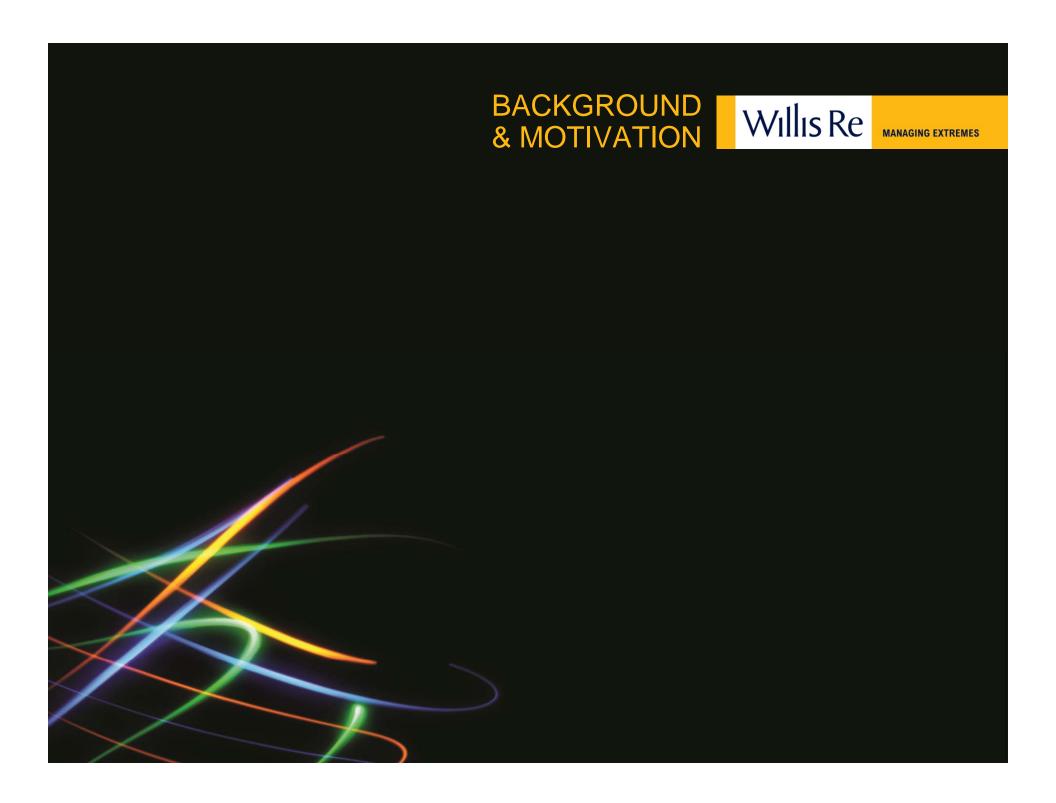

Decide

Hedge

#### Goal

- Quantify
  - Use market instruments to estimate the cost of risk
- Decide
  - Incorporate the cost of risk into decision making
- Hedge
  - Consider using market instruments to hedge risk

# Background & motivation

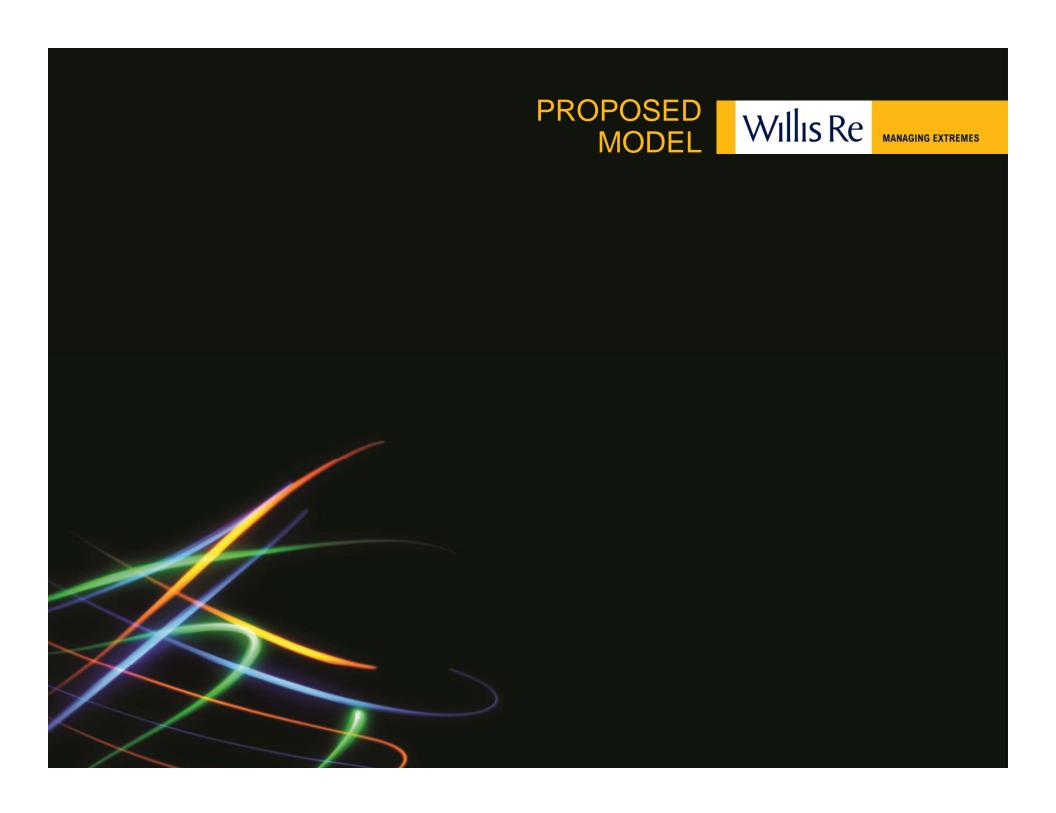

- Some current practices for managing reinsurance credit risk
  - Approved vs. non-approved
    - Short tail vs. long tail, etc.
  - Binary:
    - Yes or no (or maybe or depends)
  - Ordinal ranking of risk but no dollar cost of risk
  - No connection to price

# Background & motivation

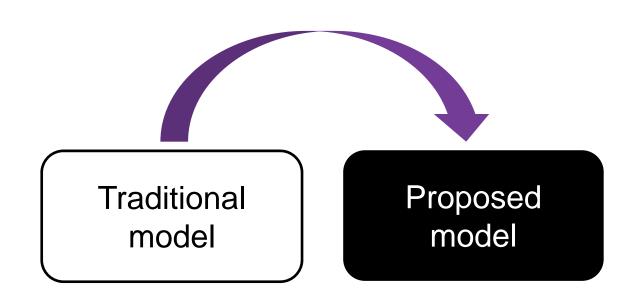

- Ramifications of current set up
  - No price penalty or benefit a for a reinsurer that is financially weaker or stronger than others
  - Firm misses out on better prices from non-approved reinsurers
  - Difficult to weigh risk versus reward
  - Difficult to evaluate the cost-benefit of traditional reinsurance versus collateralized reinsurance

# Shift your paradigm

# Proposed model

Quantify

Decide

Hedge

Calculate credit-risk-adjusted price of reinsurance

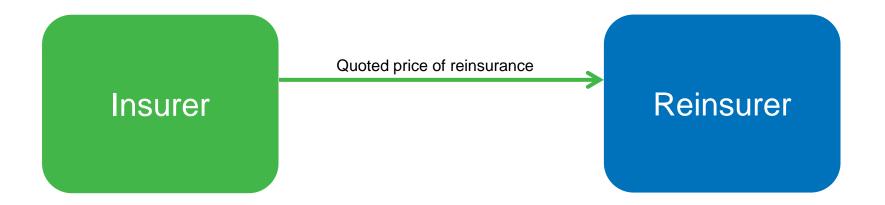

- Quoted reinsurance price
  - = credit-risk-adjusted price of reinsurance
    - cost of reinsurance credit risk

- Credit-risk-adjusted price of reinsurance
  - = quoted reinsurance price
    - + cost of reinsurance credit risk

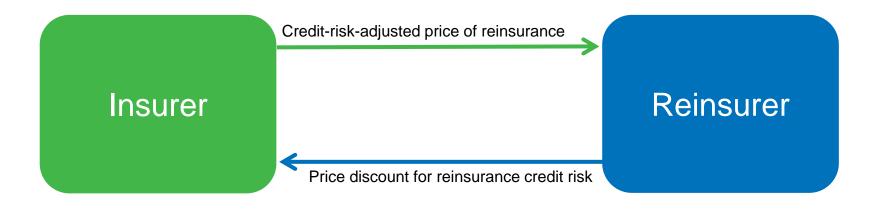

What we observe

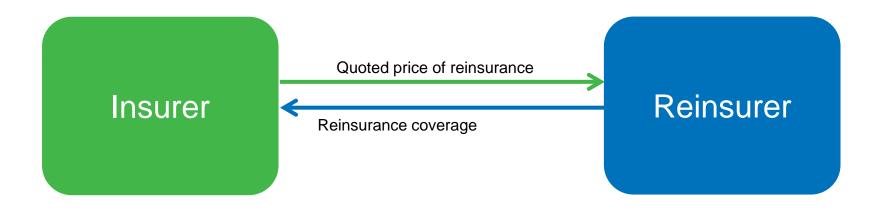

What really is happening

- Quoted price
  - = credit-risk-adjusted price of reinsurance
    - cost of reinsurance credit risk

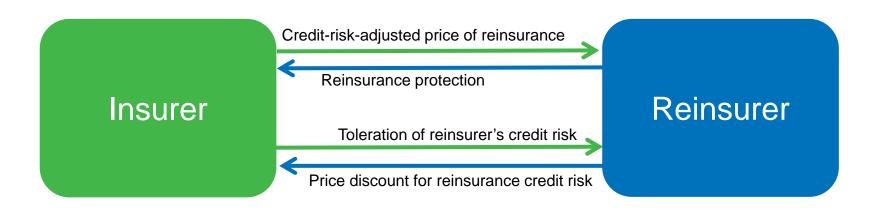

What we observe

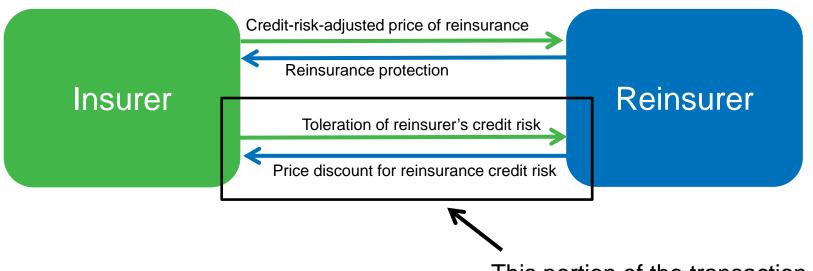

What really is happening

What really is happening

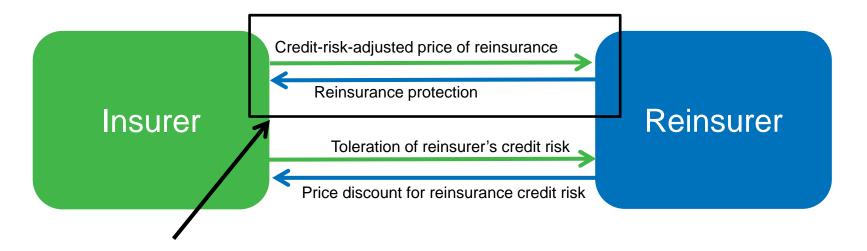

This portion of the transaction varies across reinsurers

No way to compare prices

What really is happening

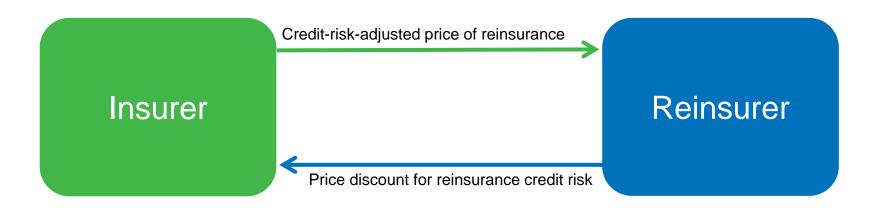

This portion of the transaction does not vary across reinsurers

Compare prices on an apples-to-apples basis

What really is happening

- Credit-risk-adjusted price of reinsurance
  - = quoted price
    - + cost of reinsurance credit risk

Use this metric to compare reinsurance quotes on a consistent basis

• How to calculate the cost of reinsurance credit risk?

- Use market instruments like credit default swaps (CDS)
  - Example below for discussion purposes

|              | 1Y CDS Spread bps   |
|--------------|---------------------|
| Company Name | (as of 28-Sep-2009) |
| Reinsurer 1  | 13.25               |
| Reinsurer 2  | 73.50               |
| Reinsurer 3  | 102.37              |
| Reinsurer 4  | 15.00               |
| Reinsurer 5  | 273.24              |
| Reinsurer 6  | 26.00               |
| Reinsurer 7  | 65.24               |
| Reinsurer 8  | 131.22              |
| Reinsurer 9  | 95.03               |
| Reinsurer 10 | 49.30               |

source: Thomson Reuters

#### Decide

 Incorporate the cost of credit risk when making comparisons and making decisions

Example: when comparing reinsurance quotes

|             | 1           | 2            | 3 = 1 * 2   | 4            | 5              | 6 = 4 / 10k * 5   | 7 = 3 + 6   | 8 = 7 / 1   |
|-------------|-------------|--------------|-------------|--------------|----------------|-------------------|-------------|-------------|
|             |             | Quoted       |             |              |                |                   | Credit risk | Credit risk |
|             | Reinsurance | Reinsurance  | Quoted      | Price of CDS | Notional       |                   | adjusted    | adjusted    |
|             | Occurrence  | Rate on Line | Reinsurance | (in basis    | amount of      | Price of one year | reinsuranœ  | reinsurance |
| Reinsurer   | Limit       | (RoL)        | Price       | points)      | CDS protection | CDS protection    | priœ        | RoL         |
| Reinsurer 1 | 100,000,000 | 6.00%        | 6,000,000   | 13.250       | 100,000,000    | 132,500           | 6,132,500   | 6.13%       |
| Reinsurer 8 | 100,000,000 | 5.50%        | 5,500,000   | 131.220      | 100,000,000    | 1,312,200         | 6,812,200   | 6.81%       |

# Decide

Time to modify traditional "approved list"?

|             |              | 1           | 2            | 3 = 1 * 2   | 4            | 5              | 6 = 4 / 10k * 5   | 7 = 3 + 6   | 8 = 7 / 1   | 9            |
|-------------|--------------|-------------|--------------|-------------|--------------|----------------|-------------------|-------------|-------------|--------------|
|             |              |             | Quoted       |             |              |                |                   | Credit risk | Credit risk |              |
|             |              | Reinsurance | Reinsurance  | Quoted      | Price of CDS | Notional       |                   | adjusted    | adjusted    | Share        |
|             |              | Ocurrence   | Rate on Line | Reinsurance | (in basis    | amount of      | Price of one year | reinsurance | reinsuranœ  | authorized   |
| Reinsurer   | Status       | Limit       | (RoL)        | Price       | points)      | CDS protection | CDS protection    | priœ        | RoL         | by reinsurer |
| Reinsurer 4 | Approved     | 100,000,000 | 8.50%        | 8,500,000   | 15.000       | 100,000,000    | 150,000           | 8,650,000   | 8.65%       | 50.00%       |
| Reinsurer 9 | Approved     | 100,000,000 | 7.00%        | 7,000,000   | 95.030       | 100,000,000    | 950,300           | 7,950,300   | 7.95%       | 50.00%       |
| Reinsurer 8 | Not Approved | 100,000,000 | 6.50%        | 6,500,000   | 131.220      | 100,000,000    | 1,312,200         | 7,812,200   | 7.81%       | 50.00%       |

#### Decide

- Casualty more complex
  - Multiple future years to worry about
  - Expand view of CDS pricing across various time horizons
  - Example: compare cost of credit risk from 2 reinsurers

MANAGING EXTREMES

#### Hedge

- Proposal (until now)
  - Do quantify the cost of reinsurance credit risk
  - Do include the cost of risk when comparing prices
  - Do use market instruments like CDS to quantify
- But should you actually buy CDS and hedge the risk of reinsurance credit default?
  - Yes, no, or maybe so?

## Hedge: 4 (or 5) strategies

- Rely on modeling and capital
  - Don't hedge

- Focus on the tail event
  - Hedge tail risk
  - Otherwise: don't hedge

- Be wary of parameter uncertainty
  - Hedge

- Add value based on theory of the firm
  - Hedge

#### Hedge: 4 (or 5) strategies

- Rely on modeling and capital
  - Don't hedge

- Focus on the tail event
  - Hedge tail risk
  - Otherwise: don't hedge

- Be wary of parameter uncertainty
  - Hedge

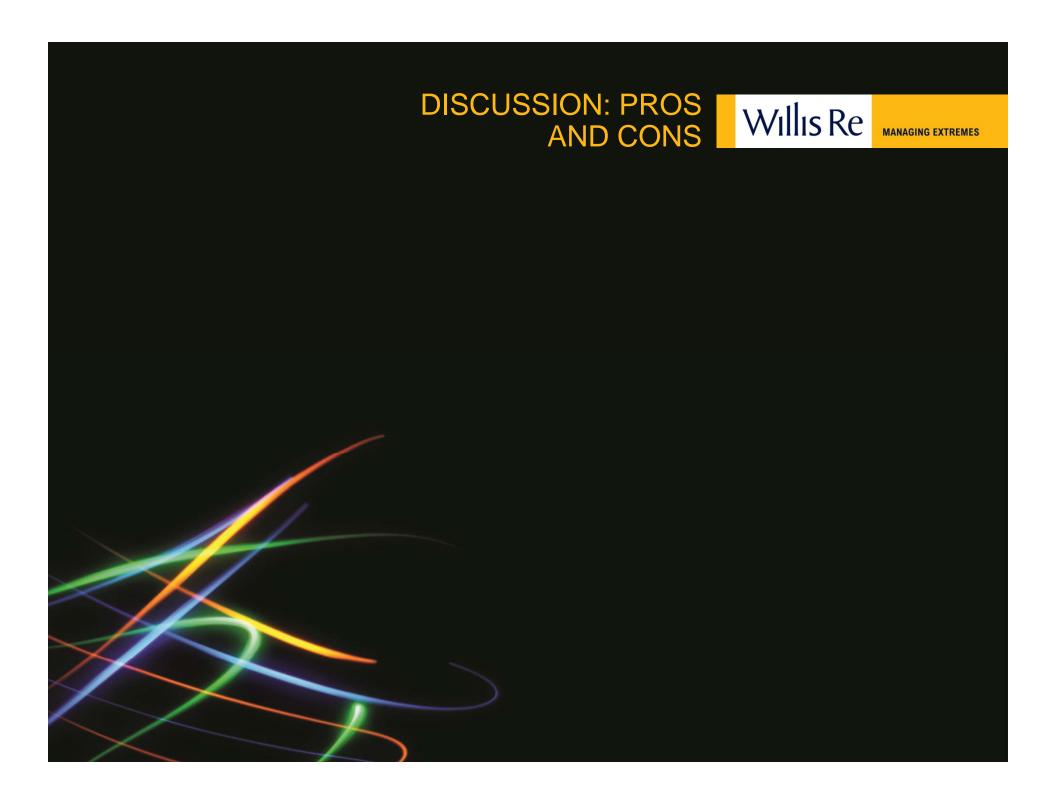

- Add value based on theory of the firm
  - Hedge

Combine long-term strategy from choices above together with a short-term tactics

#### Hedge

- Also consider "drift"
  - Even if reinsurance credit risk is acceptable now, what if something changes?
  - What if reinsurers sustain downgrades?
- Reinsurance credit risk could drift from low to high
  - If you're hedged then you're OK
  - If not, then … ?

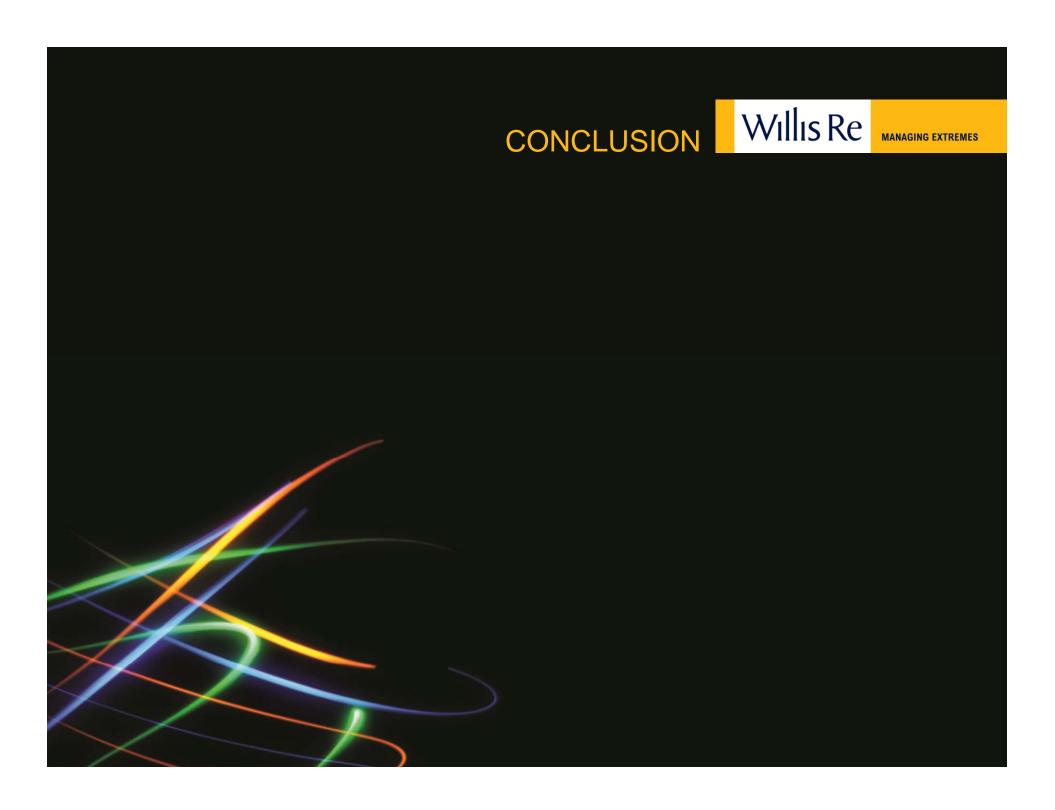

## Discussion: pros and cons

#### Critiques

- Still have counterparty credit risk via the provider of the credit risk protection
- Basis risk: bond default vs. reinsurance default and holding company versus operating company
- Basis risk: priority of payments and recovery rates
- Reinsurance credit risk emanates not just from ability to pay but also form willingness to pay
- Market prices of credit instruments show volatility and noise
- Not all reinsurers have actively traded credit instruments

#### Conclusion

- Quantify
  - Use market instruments such as CDS to quantify the cost of risk
- Decide
  - Incorporate the cost of risk into decision making
- Hedge
  - Consider using CDS instruments to actively hedge the risk of reinsurance credit default or other "credit events"
