Intermediate Track II

Investigating and Detecting Change

September 2009 Chicago, IL

Introduction

The Ideal Situation

Loss reserve data should contain a long, stable history of homogeneous claim experience, where no significant operations changes materially affect either the mix of business or the handling of claims, and there should be a sufficient number of claims to produce credible loss patterns.

Introduction

The Reality

Virtually all elements of "The Ideal" are periodically violated:

- 1. The Mix Changes
- 2. Claim Handling Changes
- 3. Case Reserves are Strengthened/Weakened
- 4. Other Factors
 - Changes in Deductibles, Limits, SIRs
 - Changes in Reinsurance
 - ◆ Tort Reform, other law changes
 - New Sources of Loss
 - Changes in the Economy

Introduction

This Session Will Discuss

- The potential impact of mix changes
- Changes in claim closing patterns
- Changes in case reserve adequacy
- ◆ What Else?

CHANGE IN MIX

Cumulative Paid Losses (Combined)

Accident	Mor	nths of D	evelopn	<u>nent</u>
Year	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>
2005	\$2,000	\$4,000	\$5,100	\$5,100
2006	2,000	4,000	5,100	5,100
2007	2,000	4,000		5,100
2008	2,000			5,100

Cumulative Paid Losses (Category A)

Accident	Months of Development			
<u>Year</u>	12	<u>24</u>	<u>36+</u>	<u>Ultimate</u>
2005	\$1,500	\$1,800	\$2,100	\$2,100
2006	1,500	1,800	2,100	2,100
2007	1,500	1,800		2,100
2008	500			700

Develops quickly
Most of \$ paid within 12 months

Cumulative Paid Losses (Category B)

Accident	Mo	Months of Development			
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>	
2005	\$500	\$2,200	\$3,000	\$3,000	
2006	500	2,200	3,000	3,000	
2007	500	2,200		3,000	
2008	1,500			9,000	

Develops slower than Category A Most of \$ paid between 12-24 months

Paid Loss Ultimate Comparison

Accident Year 2008 ultimate loss if change in mix is ignored: \$5,100 (i.e. unchanged from 2005)

Accident Year 2008 ultimate if data is separately analyzed: \$9,700 (i.e. sum of two category ultimates)

Key Principle

Always search for subdivisions of data related to possible causes of variable loss development

Suggested Subdivisions of Data Include

Primary:

- 1. Geographic
- 2. New Products vs. Old
- 3. Subline or Coverage
- 4. Deductibles or Policy Limits
- 5. Type of Loss Payment (e.g., Medical vs. Indemnity)

Reinsurance:

- 1. Attachment Point
- 2. Production Source
- 3. Line or Subline

How Do You Decide?

Ask:

- 1. Underwriters
- 2. Claims Department
- 3. Agents
- 4. Actuaries

The Key:

Learn as much as possible about the book of business you are evaluating.

- What it has been historically
- What it is becoming

What Should be Done if Mix Change Includes New Business for Which You Have Insufficient Data?

Seek Alternative Sources of Data

Perhaps general liability book formerly was comprised solely of "OL&T" exposures, but in recent years began adding "M&C" risks. Possible Solution: Relate ISO development patterns for M&C to OL&T and modify development factors for your analysis.

<u>Discuss Potential Impacts with Claims, Underwriting, Other</u> Actuaries

- ◆ Length of Tail
- Frequency
- Severity
- ♦ Loss Ratios

2009 CLRS

CLAIM CLOSING PATTERNS

What is driving the divergence?

Unadjusted Paid Loss Development Method

Accident	Months of Development				
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>	
2006	\$1,000	\$4,000	\$6,000	\$6,000	
2007	1,000	3,500		5,250	
2008	750			4,219	

Incurred Loss Development Method

Accident	<u>Mc</u>	<u>t</u>		
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>
2006	\$2,000	\$5,000	\$6,000	\$6,000
2007	1,967	4,917		5,900
2008	1,867			5,600

- 1) Review Closing Rates to Determine Whether There Has Been a Change
- 2) Seek Independent Confirmation That a Change Has Occurred
- 3) Restate Historical Closed Claims Using Current Closing Rates
- 4) Restate Historical Paid Losses Using Restated Closed Claims
- 5) Apply Standard Loss Development Method To Restated Paid Losses

Data Needed

- ◆ Paid Loss Development Triangle (slide 15)
- ◆ Reported Claims Development Triangle (slide 19)
- ◆ Projected Ultimate Claims (slide 19)
- ◆ Closed Claims Development Triangle (slide 19)
- ◆ Calendar period data offers alternative perspective and added insight (slide 22)

Step 1: Review Closing Rates to Determine Whether There Has Been a Change

Reported Claims

Accident	Months of Development			
Year	<u>12</u>	<u>24</u>	<u>36</u>	<u>Ultimate</u>
2006	500	900	1,000	1,000
2007	480	880		980
2008	450			900

Closed Claims

Accident	Months of Development		
Year	<u>12</u>	<u>24</u>	<u>36+</u>
2006	250	810	1,000
2007	240	704	
2008	180		

Closed / Reported

AccidentMonths of DevelopmentYear122436200650.0%90.0%100.0%200750.0%80.0%

Closed / Ultimate

40.0%

2008

Accident	Months	Months of Development				
Year	<u>12</u>	<u>24</u>	<u>36</u>			
2006	25.0%	81.0%	100.0%			
2007	24.5%	[†] 71.8%				
2008	20.0%					

Calendar period data from the Claim Department may also offer a useful tool for monitoring change.

- ◆New Reported Claims
- Open Claims
- Closed Claims

	(1)	(2)	(3)	(4)	(5)
	New	Open			
Calendar	Reported	Claims	In-Force	Closed	Closure
Year-end	<u>Claims</u>	@ year-end	<u>Claims</u>	Claims	Rate
			= (1) + prior year (2)		= (4) / (3)
2004	1,000	340	1,340	1,000	74.6%
2005	1,000	340	1,340	1,000	74.6%
2006	1,000	340	1,340	1,000	74.6%
2007	980	330	1,320	990	75.0%
2008	950	446 [1,280	834	65.2%
			1,280 = 950 + 330		

Columns (1), (2) and (4) derived from slide 19

Note that the slowdown in claims closing produces LOWER estimated reserves with the paid development method (will you look a gift horse in the mouth?)

Applies to incurred losses as well

Step 2: Seek Independent Confirmation that a Change Has Occurred

- Ask the Claims Department About Changes in:
 - Opening and Closing Practices
 - The Claims Handling Environment
 - Levels of Staffing, Reorganizations
 - Definition of a Claim (e.g., Multiple Claimants)

Step 3: Restate Historical Closed Claims Using Current Closing Rates

Adjusted Closing Percent (see slide 20)

Accident	Mont	hs of Developi	of Development		
Year	<u>12</u>	<u>24</u>	<u>36</u>		
2006	20.0%	71.8%	100.0%		
2007	20.0%	71.8%			
2008	20.0%				

Adjusted Closed Claims

Accident	Mont	hs of Developn	<u>nent</u>
Year	<u>12</u>	<u>24</u>	<u>36+</u>
2006	200	718	1,000
2007	196	704	
2008	180	<u> </u>	

Ultimate Claims (slide 19) * Adjusted Closing %

Step 4: Restate Historical Paid Losses Using Restated Closed Claims

Linear Interpolation of Adjusted Paid Losses

@ 24 Months

Accident Year 2006 @ 12 Months	Age 0	<u> Age 12</u>
Actual Closed Claims (slide 19)	0	250
Actual Paid Loss (slide 15)	0	1,000

Therefore, 200 Claims would expect to have \$800 paid loss

AY 2006	<u> 200 - 0</u>	X	(1,000 - 0) + 0 = 800
12 Months	250 - 0		

Accident Year 20	<u>06 @ 24 Mon</u>	iths Age 12	<u> Age 24</u>
Actual Closed Cla	ims (slide 19) 250	810
Actual Paid Loss (slide 15)		1,000	4,000
Therefore, 718 Cl	aims would e	xpect to have \$3,50	7 paid loss
AY 2006	718 - 250	x (4,000 - 1,000)	+ 1,000 = 3,507

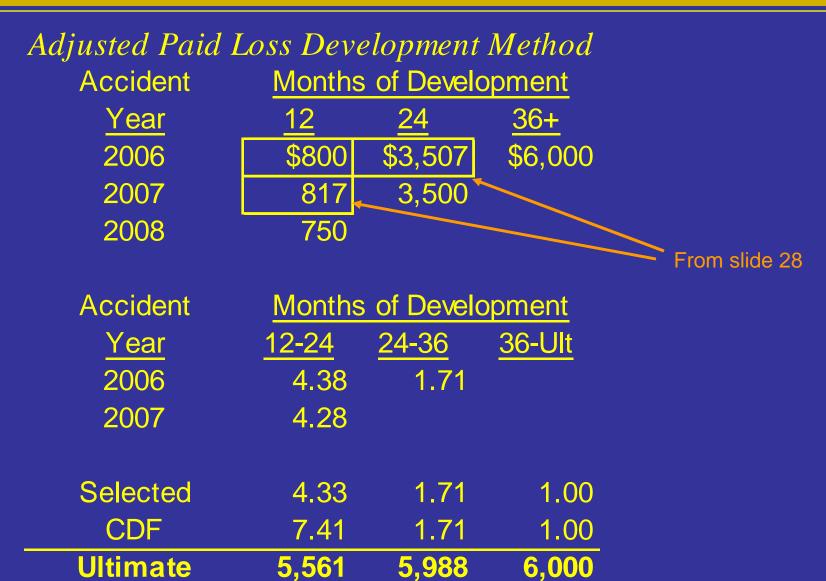

810 - 250

Accident Year 2007 @ 12 Months	Age 0	<u> Age 12</u>
Actual Closed Claims (slide 19)	0	240
Actual Paid Loss (slide 15)	0	1,000

Therefore, 196 Claims would expect to have \$817 paid loss

AY 2007
$$\underline{196 - 0}$$
 x $(1,000 - 0) + 0 = 817$
@ 12 Months $240 - 0$

Step 5: Apply Standard Loss Development Method to Restated Paid Losses

Impact of Adjustment

	Revised	Original	
Acc Yr	Forecast	Forecast	<u>Difference</u>
	Slide 30	Slide 15	
2006	\$6,000	\$6,000	\$0
2007	5,988	5,250	738
2008	<u>5,561</u>	4,219	1,342
Total	\$17,549	\$15,469	\$2,080

The slowdown in claims closing produces LOWER estimates!

AND the revised forecast is IN LINE with the incurred method estimate of \$17,500 (slide 15).

CASE RESERVE ADEQUACY

What is driving the divergence?

Incurred Losses (\$000)

Accident	Months	of Develop	oment	Projected
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>
2006	10,000	40,000	50,000	50,000
2007	10,000	45,000		56,250
2008	10,417			55,340

Paid Losses (\$000)

Accident	Months	of Developi	<u>ment</u>	Projected
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36+</u>	<u>Ultimate</u>
2006	2,000	24,000	50,000	50,000
2007	2,500	30,000		62,500
2008	3,125			78,125

What if claim closing patterns are not changing?

Reported Claims

Accident	Months of	of Develop	<u>ment</u>	
<u>Year</u>	<u>12</u>	<u>24</u>	<u>36</u>	<u>Ultimate</u>
2006	5,000	8,000	10,000	10,000
2007	5,000	8,000		10,000
2008	5,000			10,000

Closed Claims

Accident	Months of Development			
Year	<u>12</u>	<u>24</u>	<u>36+</u>	
2006	1,000	6,000	10,000	
2007	1,000	6,000		
2008	1,000			

- 1) Review Paid-To-Incurred Triangles
- 2) Review Trends in Average Paid Claims Versus Trends in Average Case Reserves
- 3) Review Potential Reasons for Observed Trends
- 4) Adjust Historical Case Reserves to Current Adequacy Levels
- 5) Calculate Adjusted Incurred Losses
- 6) Project Ultimate Losses Using Adjusted Incurred Losses and Standard Loss Development

Step 1: Review Paid - To - Incurred Triangles

Accident	Months of Development					Months of Development				
Year	<u>12</u>	<u>24</u>	<u>36</u>							
2006	20%	60%	100%							
2007	25%	67%								
2008	30%									

[paid loss / incurred loss from slide 33]

Ratios are increasing. Since settlement rates appear consistent, may be due to a decrease in case reserve adequacy.

Step 2: Review Trends in Average Paid Claims Versus Trends in Average Case Reserves

Accident	Average Paid Loss		Average Case Reserves		
Year	<u>12</u>	<u>24</u>	<u>12</u>	<u>24</u>	
2006	2,000	4,000	2,000	8,000	
2007	2,500	5,000	1,875	7,500	
2008	3,125		1,823		
Trend	25%	25%	-4.5%	-6.3%	

Avg Paid \$ = Paid \$ Triangle (Slide 33) / Closed Claim Triangle (Slide 34) * 1,000

Avg Case Reserves = (Incurred \$ Triangle - Paid \$ Triangle (Slide 33)) /

(Reported Claim Triangle - Closed Claim Triangle (Slide 34)) * 1,000 OBSERVATION: CASE RESERVE **WEAKENING**

Step 3: Review Potential Reasons for Observed Trends

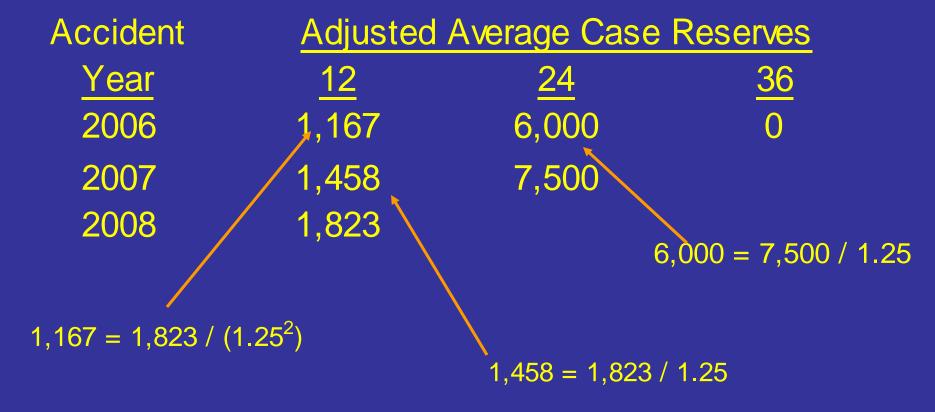

- Is the book shifting to a lower severity mix?
- Have policy limits and/or reinsurance retentions kept pace with claims inflation?
- Has anything material changed in the handling of claims?
 - Turnover in claim department staff
 - Changes in philosophy

If you conclude there has been case reserve weakening (or strengthening), adjust the data. Here's one approach.

Step 4: Adjust Historical Case Reserves to Current Adequacy Levels

Assumption:

25% is the Actual Rate of Claim Inflation (slide 39)

Note: Use paid data for inflation assessment.

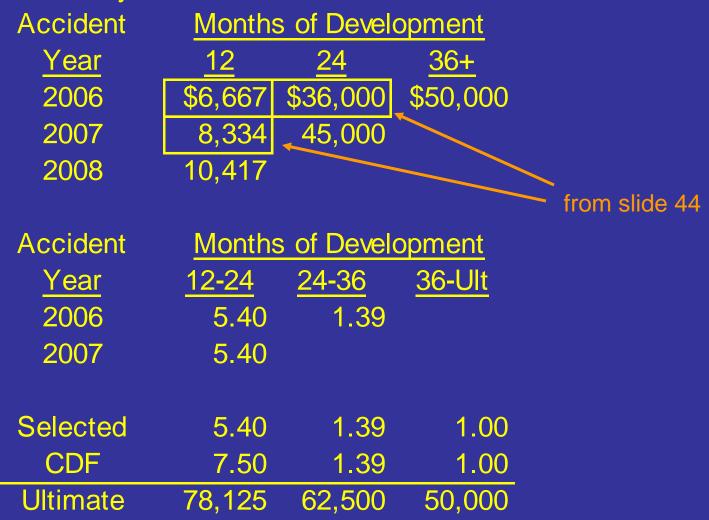

Step 5: Calculate Adjusted Incurred Losses

2009 CLRS

	Paid to Date Losses (slide 33)	+	# of Open Claims (slide 34)	X	Adjusted Average Case Reserves (slide 42)/1000	=	Adjusted Incurred Losses
AY 2006 @ 12 Months	2,000	+	4,000	X	1.167	=	6,667
AY 2006 @ 24 Months	24,000	+	2,000	X	6.000	=	36,000
AY 2007 @ 12 Months	2,500	+	4,000	X	1.458	=	8,334

Step 6: Project Ultimate Losses Using Adjusted Incurred Losses and Standard Loss Development

Adjusted Incurred Losses

Impact of Adjustment

	Original	Original	Revised
	Incurred	Paid	Incurred
Accident	Estimate	Estimate	Estimate
<u>Year</u>	(Slide 33)	(Slide 33)	(Slide 46)
2006	\$50,000	\$50,000	\$50,000
2007	56,250	62,500	62,500
2008	55,340	78,125	78,125
Total	\$161,590	\$190,625	\$190,625

What Else?

- ♦ Deductibles/Limits/SIRs change
- ♦ Reinsurance Arrangements Change
- ◆ Tort Reform
- ◆ New Sources of Loss
- Changes in the Economy

Deductibles/Limits/SIRs change

- Deductibles may change the number of claims
- ♦ May change loss \$ as well
- Need to review profile of deductibles and limits – inherent assumption is no change
- ◆ Treat like change in mix

Reinsurance Arrangements

Change

- ◆ Effect on total net liability
- ◆ Might also affect claims handling e.g., if retention is limited to \$100,000 by reinsurance, is there an incentive to settle a \$500,000 case more quickly than if you were on the hook for the whole thing?

Tort Reform

- Change in benefits which would affect severity and payout (e.g. cost containment)
- Change in statute of limitations (frequency change, less "tail" development)
- ◆ New patterns e.g., ability to do lump-sum settlements of permanent workers' comp claims

New Sources of Loss

- ◆ Mold
- ◆ Terrorism
- Asbestos just keeps on running
- Stacking of auto limits

Conclusion

- ♦ Know what's going on in the company
- Know what actuarial methods can and can't do
- Pick the right tool for the job
- ◆ BE AWARE!

Summary

Assumption of long, stable history is often violated.

- ◆ The mix of business can change
- Claim closing patterns can change
- Changes in case reserve adequacy can change

Looking Ahead

Session 3 presents two case studies.

» Think about what's going on.

» Decide how to evaluate the impact.
