Intermediate Track I

Considerations in Evaluating Changing Conditions

2011 CLRS
September 15-16, 2011
Las Vegas, Ne

Introduction

- Must go beyond rote application of basic techniques to produce a meaningful reserve estimates.
- Additional considerations and diagnostic tools offer perspective in the effort to understanding risks and uncertainties.
- Communication among operating units is essential.
- Subsequent Intermediate Tracks will provide additional insights and techniques useful in addressing several of these issues.

Considerations

- Aging of Claims
- Loss Adjustment Expenses
- Operations
- Limits and Deductibles
- Interpolation/Extrapolation
- Changing Indications

Considerations

- Aging of Claims
 - 1. Average Closed Value is not the same as Average Open Value
 - 2. Early Reported Claims are not the same as Late Reported Claims

- Loss adjustment expense
- Operations
- Limits and Deductibles
- Interpolation/Extrapolation
- Changing Indications

The average value of claims closed is often a poor estimator of the ultimate average settlement value of claims still open.

Consideration #1 (cont.)

Accident Year 2002

	Cumulative Paid		Number of		Average
Calendar	on Closed	<u>Claims</u>	Closed	l Claims	Settlement
<u>Date</u>		% of		% of	<u>Value</u>
	\$	Ultimate	No.	Ultimate	\$
12-02	\$50,000,000	25%	1,000	50%	\$50,000
12-03	100,000,000	50%	1,500	75%	66,667
12-04	150,000,000	75%	1,800	90%	83,333
*	*	*	*	*	*
*	*	*	*	*	*
*	*	*	*	*	*
12/10 (Ult)	200,000,000	100%	2,000	100%	100,000

Why might this frequently be true?

Consideration #1 (cont.)

- Claims that close early are smaller
- For example in Workers Compensation:
 - » The cases that close quickly are usually for minor injuries, and may involve just medicalonly costs.
 - » The cases open for a long period represent severe injuries and may include:
 - Major Medical Expenses
 - Lifetime Pension Benefits

The average costs for late reported claims may differ materially from those reported earlier.

Consideration #2 (cont.)

Reason: Often, late reported claims have a very different nature than those reported early.

- (1) General Liability: Product Liability vs "Slip & Fall"
 - » Product Liability cases are often reported later
 - » Product cases are often complex, requiring expert testimony and lengthy litigation
 - » Product cases reported very late may involve latent injury or cumulative exposure, cases which are difficult to define in terms of date of loss, party at fault, number of occurrences, and type or extent of injuries

9

Consideration #2 (cont.)

(2) Workers Compensation:

Most Workers Compensation cases are reported within the first 18 months. However, when there are late reported claims they often involve occupational diseases (e.g. carpal tunnel), rather than trauma that is quickly identified and assignable to a single accident date and/or policy.

Considerations

- Aging of Claims
- Loss adjustment expense
 - 3. The ratio of **Paid Defense & Cost Containment (DCC)** to **Paid Loss** increases over time
 - **4. Segregate** into Components
- Operations
- Limits and Deductibles
- Interpolation/extrapolation
- Changing Indications

For an accident year, the ultimate ratio of DCC to loss may be materially higher than has been true for payments to date.

Consideration #3 (cont.)

Reasons:

- 1) Cases open for lengthy periods often involve costly litigation.
- 2) Legal payments are occasionally disbursed later than loss payments.

Consideration #3 (cont.)

Industry Schedule P Data
Other Liability and Products Liability*
Net Payments Through 12/31/02
(millions)

		Cumulative	Cumulative	
Accident	Age	Paid Losses	Paid DCC	Ratio
<u>Year</u>	(months)	<u>(1)</u>	<u>(2)</u>	(3)=(2)/(1)
1998	60	\$10,258	\$2,272	22.1%
1999	48	9,549	1,979	20.7%
2000	36	7,673	1,612	21.0%
2001	24	5,183	765	14.8%
2002	12	2,600	209	8.0%

^{*} Includes both claims-made and occurrence

Source: The Thomson Corporation, June 2003

Consideration #3 (cont.)

- This pattern by company can be influenced by many factors, such as the mode of payment of legal bills, which may vary by company between:
 - » Interim Case Billing
 - » End of Case Billing
- Other influences can include:
 - » Geographical Differences
 - » Use of Staff Counsel vs. Outside Counsel
 - » Classes of Business
 - » Primary vs. Excess Contracts

Where DCC costs are volatile, it may be useful to split it into components such as:

- » Attorney Fees (External or Internal)
- » Other Legal
- » Expert Witnesses
- » Medical Audits/Reviews

Consideration #4 (cont.)

Reasons:

- (1) Legal expense are typically the fastest growing component of DCC, with a growth rate exceeding trends in loss costs.
- (2) Many companies have attempted cost savings steps such as:
 - » Use of staff counsel, rather than independent attorneys, in some situations
 - » Use of companies which audit legal bills
 - » More vigorous defense (which may slow payment patterns on loss side)
 - » Initiating contact with the claimant sooner

Considerations

- Aging of Claims
- Loss adjustment expense
- Operations
 - 5. Rate adequacy can impact reserving
 - 6. Positive Development does not mean a Claim Department problem
 - 7. Operational changes affect reserving
- Limits and Deductibles
- Interpolation/Extrapolation
- Changing Indications

Expected Loss Ratios based on prior years' experience, used in reserving, must be adjusted for any material changes in rate adequacy.

Consideration #5 (cont.)

If adjustments are not made, severe distortions can result:

				Reserves	Ratio of		Reserves
Accident	Earned	Paid	2007 Loss	Using 2007	Actual Rates to	Actual	Using Actual
Year	Premium	Losses	Ratio	Loss Ratio	Adequate Rates	Loss Ratio	Loss Ratio
(1)	(2)	(3)	(4)	(5)=(2)x(4)-(3)	(6)	(7)=(4) / (6)	(8)=(2)x(7)-(3)
2008	10,000	5,000	50%	0	1.0	50%	0
2009	9,000	2,700	50%	1,800	0.9	56%	2,300
2010	8,000	800	50%	3,200	0.8	63%	4,200
Total		8,500		5,000			6,500
					Error = \$	1,500	

Consideration #5 (cont.)

Think about it!

From another angle...

				Ultimates	Ratio of		Ultimates
Accident	Earned	Paid	2007 Loss	Using 2007	Actual Rates to	Adjusted	Using Actual
Year	Premium	Losses	Ratio	Loss Ratio	Adequate Rates	Loss Ratio	Loss Ratio
(1)	(2)	(3)	(4)	(5)=(2)x(4)	(6)	(7)=(4) / (6)	(8)=(2)x(7)-(3)
2008	10,000	5,000	50%	5,000	1.0	50%	5,000
2009	9,000	2,700	50%	4,500	0.9	56%	5,000
2010	8,000	800	50%	4,000	0.8	63%	5,000
Total		8,500		13,500			15,000

If rates are changing,

but exposure is not ...,

What do you expect to happen with ultimate losses?

Consideration #5 (cont.)

- Premium can be affected by increased competition and efforts to retain market share
 - » filed rate decreases
 - » increased use of flexible discounts
 - » accounts moved to "preferred" status
- Need to talk to your colleagues to understand what is happening in the marketplace
 - » underwriters
 - » marketing
 - » field office staff
 - » pricing actuaries

Upward case development does not necessarily demonstrate something "needs fixing" in the Claims Department.

Consideration #6 (cont.)

Resulting Development (Illustration):

ESTIMATE AT 12 MONTHS			STATUS 3 YEARS LATER		
<u>Claims</u>	Average \$	<u>Total</u>	Average \$	<u>Total</u>	
1-97	\$10,000	\$970,000	\$10,000	\$970,000	
<u>98-100</u>	<u>10,000</u>	<u>30,000</u>	500,000	<u>1,500,000</u>	
TOTAL		\$1,000,000		\$2,470,000	

LDF = 2.47

The Point: Loss development can arise from the natural emergence of facts within the context of a company's reserving philosophy

Internal company changes can dramatically affect patterns in reserving data, and distort the result of basic reserving methodologies.

Consideration #7 (cont.)

For example, suppose the company changed TPA's 12 months ago, and now has the following triangles:

_	 	
		OSSAS.

Acc Yr.	<u>12 Mos.</u>	24 Mos.	<u>36 Mos.</u>	48 Mos.	<u>60 Mos.</u>
2006	100	150	180	198	208
2007	100	150	180	198	
2008	100	150	180		
2009	100	150			
2010	100				

Reported Losses

<u>A</u>	cc Yr.	12 Mos.	24 Mos.	36 Mos.	<u>48 Mos.</u>	<u>60 Mos.</u>
4	2006	125	167	189	202	208
4	2007	125	167	189	206	
	2008	125	167	194		
	2009	125	177			
	2010	133				

Consideration #7 (cont.)

Paid to Reported Ratios

Acc Yr.	<u>12 Mos.</u>	<u>24 Mos.</u>	<u>36 Mos.</u>	<u>48 Mos.</u>	<u>60 Mos.</u>
2006	0.80	0.90	0.95	0.98	1.00
2007	0.80	0.90	0.95	.096	
2008	0.80	0.90	.093		
2009	0.80	.085			
2010	.075				

Paid to Reported Ratios are an example of a diagnostic tool which can be used to check for:

- » Case reserve strengthening (this example)
- » Case reserve weakening
- » Change in rate of payment

Later sessions will discuss methods, such as the Berquist & Sherman approach, to correct for these kinds of changes.

27

Considerations

- Aging of Claims
- Loss adjustment expense
- Operations
- Limits and Deductibles
 - 8. Higher limits mean more future development
 - 9. Higher deductibles (attachment points) mean more future development
- Interpolation/Extrapolation
- Changing Indications

When reinsurance retentions and/or policy limits are higher, the portion of ultimate losses that are reported at each given maturity tends to be lower.

Consideration #8 (cont.)

ILLUSTRATION:

One Claim

	aro reported t	<u>40 01.</u>	
12 Months	24 Months	36 Months (Ult.)	<u>)</u>

24 Months 26 Months (Lilt)

Dollars Reported as of

Loss Limited to \$100,000	\$50,000	\$100,000	\$100,000
Loss Limited to \$500,000	50,000	300,000	500,000
Unlimited Loss	50,000	300,000	1,000,000

% of Ultimate Losses Reported as of:

12 MOHHS	<u> 24 MOHH15</u>	30 MOHITS (OIL.)
50%	100%	100%
10%	60%	100%
5%	30%	100%
	50% 10%	50% 100% 10% 60%

When attachment points are higher for reinsurance, excess, umbrella or self-insured coverages, then the percentage of ultimate dollars that is reported at each given maturity tends to be lower.

Consideration #9 (cont.)

ILLUSTRATION:

Dollars	Reporte	d as of:
---------	---------	----------

One Claim	12 Months	24 Months	36 Months (Ult.)
1st Dollar Coverage	\$50,000	\$300,000	\$1,000,000
Losses in excess of \$100,000	0	200,000	900,000
Losses in excess of \$500,000	0	0	500,000

% of Ultimate Losses Reported as of:

	12 Months	24 Months	36 Months (Ult.)
1st Dollar Coverage	5%	30%	100%
Losses in excess of \$100,000	0%	22%	100%
Losses in excess of \$500,000	0%	0%	100%

Considerations

- Aging of Claims
- Loss adjustment expense
- Operations
- Limits and Deductibles
- Interpolation/Extrapolation
 - 10. Incomplete accident years can be deceiving
 - 11. Tail development is important
- Changing Indications

Estimating ultimate losses for an incomplete accident year requires special adjustments.

Consideration #10 (cont.)

Reported losses through Q3 2011

Accident					
<u>Year</u>	<u>9 mos.</u>	<u>21 mos.</u>	33 mos.	45 mos.	57 mos. (ult.)
2007	100,000	250,000	300,000	315,000	315,000
2008	100,000	250,000	300,000	315,000	
2009	120,000	300,000	360,000		
2010	110,000	275,000			
2011	130,000				

Age to Age Factors						
Accident						
<u>Year</u>	<u>9-21</u>	<u>21-33</u>	<u>33-45</u>	<u>45-57</u>		
2007	2.50	1.20	1.05	1.00		
2008	2.50	1.20	1.05			
2009	2.50	1.20				
2010	2.50					
Cumulative Factor	3.15	1.26	1.05	1.00		
to Ultimate						

Consideration #10 (cont.)

Required IBNR as of Q3 2011

	(1)	(2)	$(3)=(1)^*(2)$	(4)=(3)-(1)
	Reported	Factor	Estimated	Required
Accident	as of	to	Ultimate	IBNR as of
<u>Year</u>	Q3 2011	<u>Ultimate</u>	<u>Losses</u>	<u>Q3 2011</u>
2007	315,000	1.00	315,000	0
2008	315,000	1.00	315,000	0
2009	360,000	1.05	378,000	18,000
2010	275,000	1.26	346,500	71,500
2011	130,000	3.15	409,500	279,500

IS THIS CORRECT?

Estimating ultimate losses for an incomplete accident year requires special adjustments.

The latest year needs to be reduced by .75 for the incomplete policy period. Future claims for the final quarter need to be excluded.

Consideration #11

"Tail Development" can have a dramatic effect on reserve needs.

Some examples of when development occurs beyond 10 years

Products

• Complex issues (Who's liable? How to prove injury was caused by product? Date of loss?)

Workers

Compensation

Occupational Disease

• Life pension cases, with escalation clauses in some states' benefit structures

Medical costs on life pension cases

Medical

Malpractice

• Child injured at delivery reaches legal age

Delayed manifestation, with subsequent complex issues

Techniques To Derive Tail Factors

1. Examine broader data sources

e.g. ISO, NCCI, RAA, AM Best

(Caution: Learn the limitations of such data)

- 2. Curve Fitting
- 3. Generalized Bondy Method

Consideration #11 (cont.) Broader Data Sources

How Much Tail Can There Be?

Development in Reinsured Layers
Selected Cumulative Age to Ultimate Factors
Source: RAA data

Line of Business	15 Years to Ultimate	25 Years to Ultimate
WC Treaty	1.582	1.149
GL Treaty	1.234	1.030
AL Treaty	1.021	1.000

Considerations

- Aging of Claims
- Loss adjustment expense
- Operations
- Limits and Deductibles
- Interpolation/Extrapolation

Changing Indications

12. Indications can change for a variety of reasons - ask why!

Consideration #12

Why do indications change?

- » Actual losses emergence differs from expected.
- » Assumptions and/or methods change.

Last Year's Review Reported Losses at 12/2009

<u>AY</u>	<u>12 Mos.</u>	<u>24 Mos.</u>	<u>36 Mos.</u>	48 Mos.
2006	125	167	189	202
2007	125	167	189	
2008	125	167		
2009	125			

Age to Age Factors							
<u>AY</u>	<u>12-24</u>	<u>24-36</u>	<u>36-48</u>				
2006	1.34	1.13	1.07				
2007	1.34	1.13					
2008	1.34						
				Tail			
Selected	1.34	1.13	1.07	1.00			
Factor to Ultimate	1.62	1.21	1.07	1.00			

	Reported	Factor	
	Losses	to	Estimated
<u>AY</u>	at 12/2009	<u>Ultimate</u>	<u>Ultimate</u>
2006	202	1.00	202
2007	189	1.07	202
2008	167	1.21	202
2009	125	1.62	202

Easy ... right!

12 months later the actuary returns:

"Bad news, boss...

We have to take a big hit to cover deterioration in the prior years."

Will this be a pleasant discussion? What happened????

46

	Reported	Factor			
	Losses	to	Estimated	Estimate	
<u>AY</u>	at 12/2010	<u>Ultimate</u>	<u>Ultimate</u>	Last Year	<u>Impact</u>
2006	208	1.00	208	202	6
2007	206	1.03	212	202	10
2008	194	1.11	216	202	14
2009	177	1.28	226	202	24

Total Prior Year impact: 54
Increase in 4-year ultimate 6.7%

This Y	'ear's Rev	iew
Reported	Losses at	12/2010

<u>AY</u> .	12 Mos.	24 Mos.	36 Mos.	<u>48 Mos.</u>	<u>60 Mos.</u>	
2006	125	167	189	202	208	
2007	125	167	189	206		
2008	125	167	194			
2009	125	177				
2010	133					
		Age to Ag	<u>e Factors</u>			
<u>AY</u>		<u>12-24</u>	<u>24-36</u>	<u>36-48</u>	<u>48-60</u>	
2006		1.34	1.13	1.07	1.03	
2007		1.34	1.13	1.09		
2008		1.34	1.16			
2009		1.42				
						Tail
Prior selecte	ed	1.34	1.13	1.07	1.00	1.00
Selected		1.40	1.15	1.08	1.03	1.00
Factor to Ult	imate	1.79	1.28	1.11	1.03	1.00

- Did the actuary miss the boat last year?
- Did the actuary overreact this year?
- What if factors (development assumptions) remained unchanged?

If assumptions remained unchanged?

	Reported	Retain			
	Losses	Prior	Estimated	Estimate	
<u>AY</u>	at 12/2010	<u>Factor</u>	<u>Ultimate</u>	Last Year	<u>Impact</u>
2006	208	1.00	208	202	6
2007	206	1.00	206	202	4
2008	194	1.07	207	202	5
2009	177	1.21	214	202	12

Total Prior Year impact: 27
Increase in 4-year ultimate 3.4%

- Part of the impact is due to actual losses emerging different from what was expected.
- Should development assumptions change?
 - » If so, that accounts for the remaining impact.

Conclusions

It is seldom sufficient to simply manipulate the numbers. The actuary must actively seek a thorough understanding of...

- ...the loss and claims process
- ...the business and the exposures involved
 - » underwriting
 - » pricing
 - » reinsurance
- ...techniques and models to deal with the available data

Conclusions

If professional colleagues are to rely on actuarial advice, they will expect meaningful interpretation of the indications, and the risks and uncertainties in changing estimates.

Looking Ahead
