

INTRODUCTION TO CAPTIVES

Sept 6th 2012

Ellen Charnley, CA
Senior Vice President,
Marsh's Captive Solutions Group

What is a Captive?

- An insurance vehicle formed by an organisation, not otherwise generally involved in insurance, to participate in its insurance arrangements
- Ultimately a self-funding mechanism for retained risk
- Not a quick fix and should be part of a long term risk financing strategy

“a captive insurance company is a bona fide insurance or reinsurance company owned by a non-insurance company and which insures or reinsures the risks of its parent or affiliated companies”

Why Do Companies Establish Captives?

- To reduce the parent's cost of risk
- To formalize pre-funding for retained risk
- To gain a strategic advantage by accessing the reinsurance markets
- To capture profits from 'unrelated' activities

What Advantages Do Captives Offer?

Financial Benefits

- May offer certain tax benefits
- May improve the parent's negotiating position with the insurance and reinsurance markets – therefore lowering the TCOR
- Can access the reinsurance market
- Can generate underwriting & investment profits
- Can match revenue and expense - by reserving from current funds for future claim payments
- Can provide a source of additional revenue - by offering insurance to third parties

Insurance Taxation Tax Position of Captives

Insurance Company for Federal Income Tax Purposes

- Premium payments are tax deductible
- Captive recognizes income
- Captive recognizes deduction for loss reserves on discounted basis
- Position supported through precedent setting case law

Self Insurance Model – Deposit Accounting

- Payments are non-tax deductible
- No tax deduction for loss reserves
- Claims are tax deductible when paid

Tax Considerations Attaining Favourable Tax Treatment (U.S.) - requirements

1. Captive must be a bona fide 'insurance company'

- issue arms-length insurance or reinsurance contracts with premiums established in accordance with industry standards;
- be regulated in its chosen domicile as an insurance company;
- establish reasonable loss reserves;

2. Need to demonstrate "Risk Transfer"

3. Need to demonstrate "Risk Distribution"

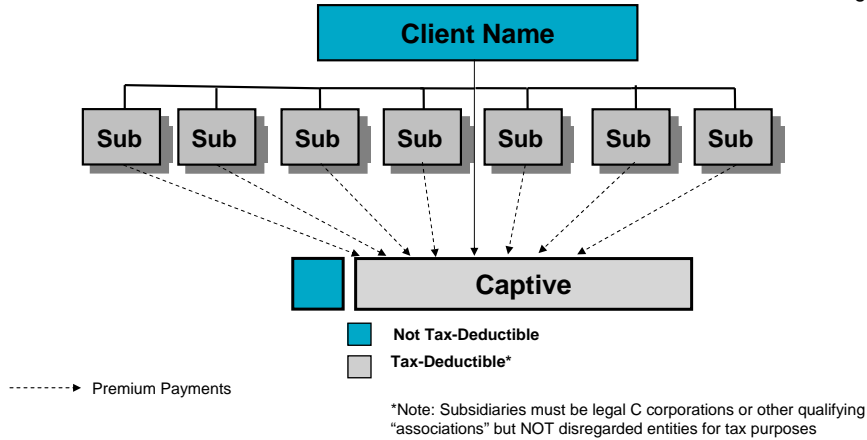

- A minimum 30% to 50% unrelated business **or**
- A brother/sister ("Humana" structure);
 - The subsidiaries of the parent should not own any stock in the captive; the stock should be owned by the parent company;
 - The captive must insure corporate affiliates that are incorporated subsidiaries, rather than branches of the parent;
 - Risks should be pooled or distributed within the captive; that is, there should not be separate accounts for each subsidiary contributing business to the captive.

What Advantages Do Captives Offer? Insurance/Strategic Benefits

- Can provide coverage for risks not usually insurable
- Can reduce the dependence for commercial insurance
- Can create flexibility in program design and broader, more simpler insurance contracts
- Can create a more effective and efficient risk management program, through
 - designing cost allocation and claims handling systems
 - generating actuarial information
 - coordinating risk management activity
- Can offer divisions a 'buy-down' option
- Can reward divisions for good loss behavior

MARSH

What Disadvantages May Come With Captives?

- Capital commitment (cash or LOC) - the captive's capital may not be available for use in the parent's business
- Adverse results - the captive's capital can be eroded by adverse results under the insurance program
- Operating costs - a captive does incur operating costs and may demand some time commitment from senior management
