

Predictive Modeling with Healthcare Reserves

2014 Casualty Loss Reserve Seminar

September 16th, 2014

GROSS CONSULTING

Healthcare Reserves

- Claims-made nature focuses attention on development as opposed to emergence
- Wealth of data available
 - Claim allegation
 - Nature of the procedure
 - Patient information
 - Doctor information
 - Hospital information
 - Etc.

Uses

- Claim management
- Reserve Analysis
- Pricing Analysis
- Underwriting Management
- Risk Management
- Reinsurance

GROSS CONSULTING

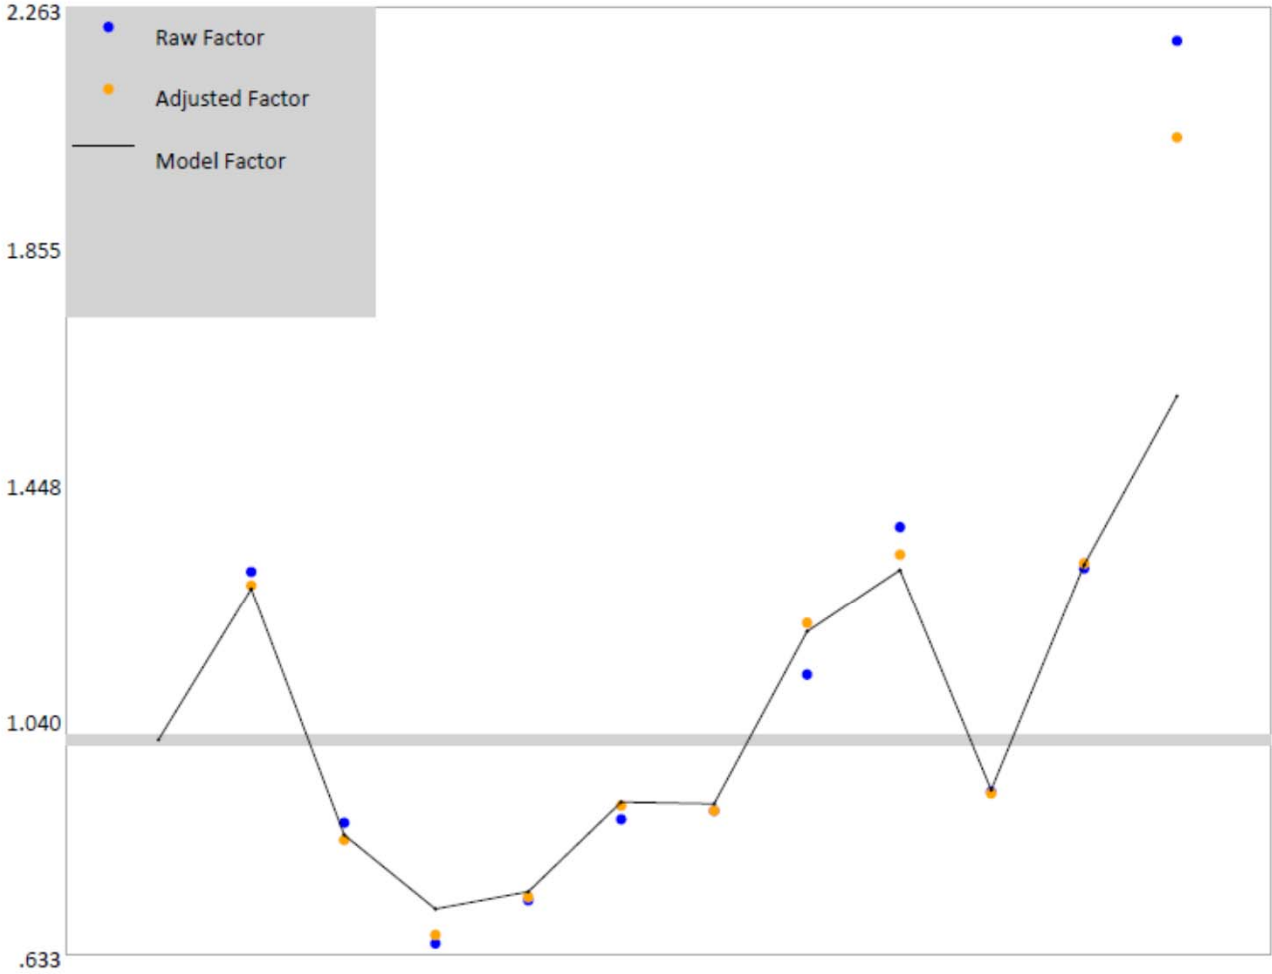

Managing the data

- Useful to think about a single calendar period
 - Claims closing
 - Changing in value
 - Payments
 - Nothing
- All of these can be modeled as a function of case reserves, age of claim, and all of the available characteristics

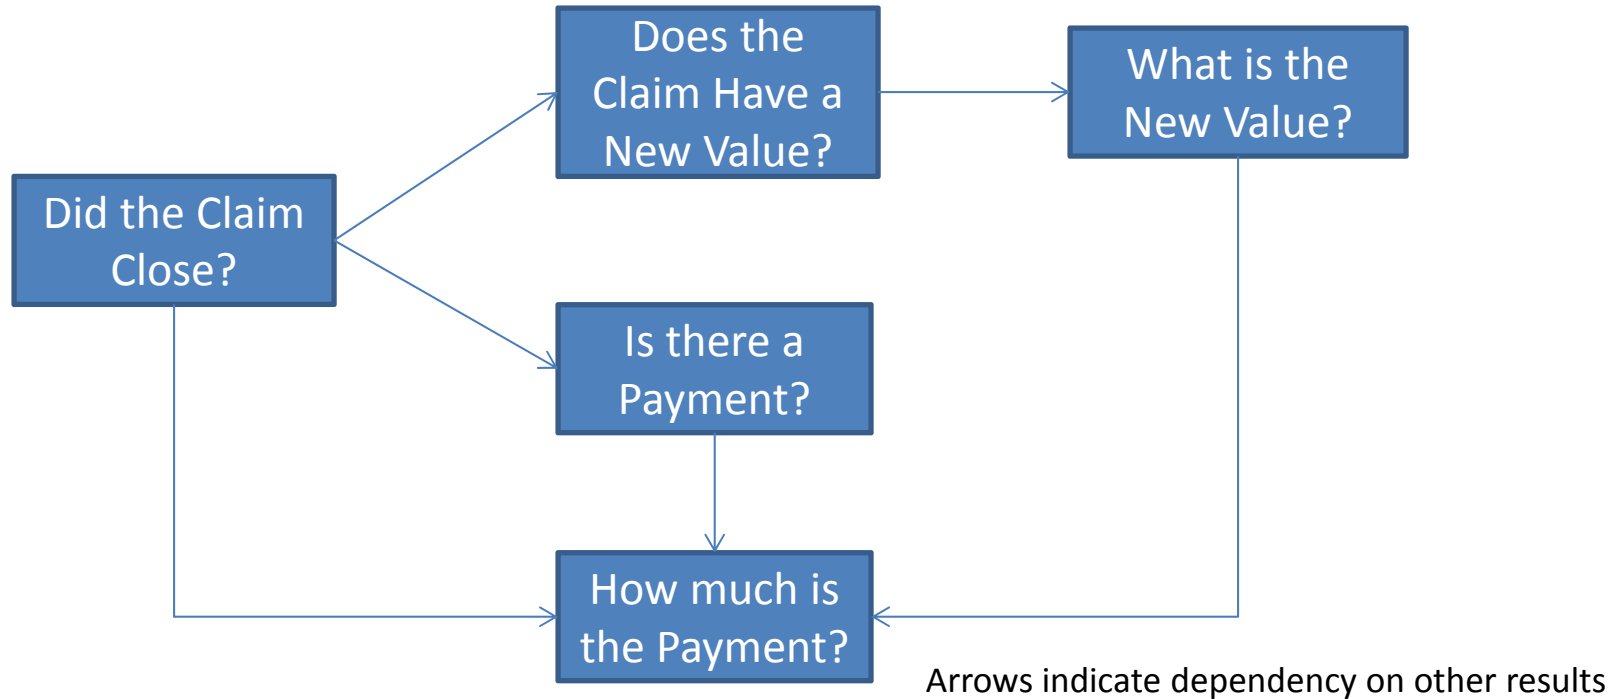

Characteristic: SeverityDescription

Closure Probability

GROSS CONSULTING

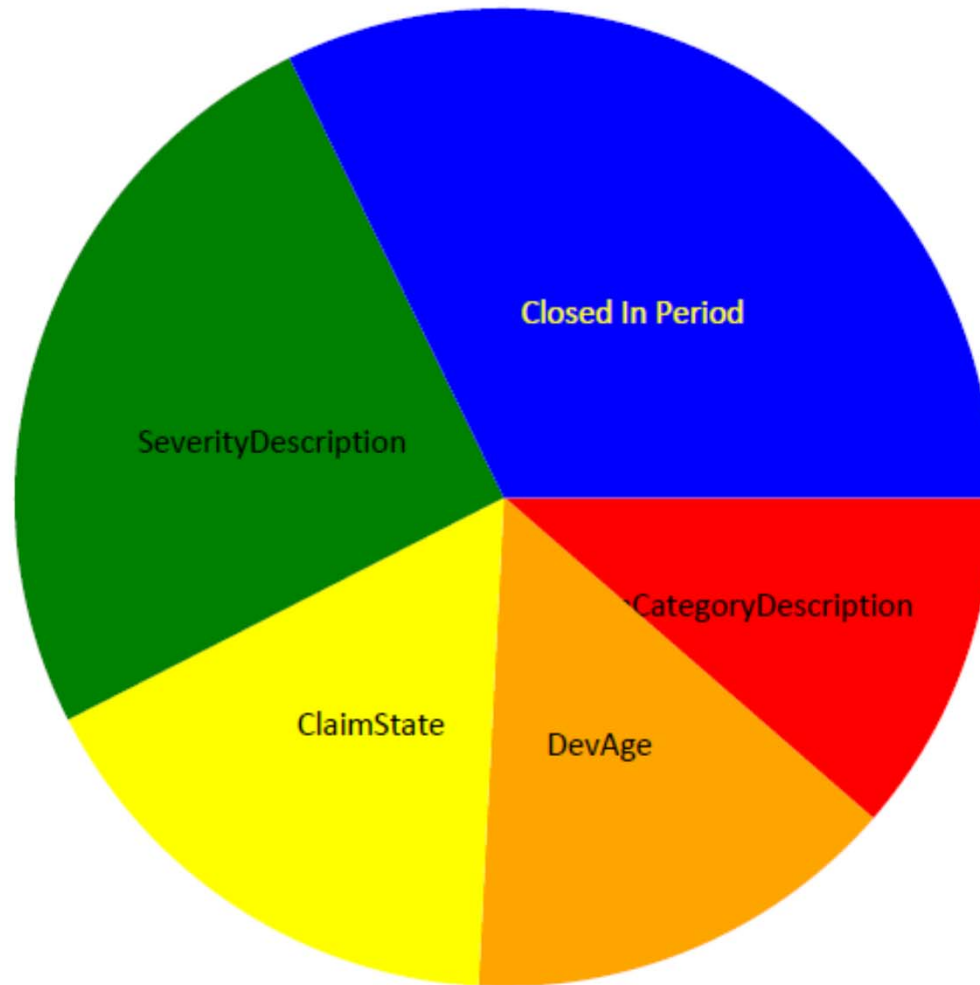

Claim activity from the beginning of the quarter to the end of the quarter

A number of available claim or exposure characteristics may have predictive value for any of these questions.

Simulate Going Forward

- Claim Development
 - Start with current inventory of open claims
 - For each open claim simulate a number of potential outcomes for the next time-step (using the claims' characteristics)
 - For those simulated claim-paths that are still open simulate forward another time-step.
 - Continue until all simulated claim-paths are closed

Uses

- Claim management
- Reserve Analysis
- Pricing Analysis
- Underwriting Management
- Risk Management
- Reinsurance

Summary

- Healthcare claims contain a wealth of data for the reserving actuary
- Multivariate predictive modeling techniques can help turn this data into **information**
- By focusing on a calendar period time-step, simulation can be used to build a more complete understanding of the reserves
- Many actuarial questions besides reserving are addressed through the use of this approach
