Antitrust Notice

The Casualty Actuarial Society is committed to adhering strictly to the letter and spirit of the antitrust laws. Seminars conducted under the auspices of the CAS are designed solely to provide a forum for the expression of various points of view on topics described in the programs or agendas for such meetings.

Under no circumstances shall CAS seminars be used as a means for competing companies or firms to reach any understanding – expressed or implied – that restricts competition or in any way impairs the ability of members to exercise independent business judgment regarding matters affecting competition.

It is the responsibility of all seminar participants to be aware of antitrust regulations, to prevent any written or verbal discussions that appear to violate these laws, and to adhere in every respect to the CAS antitrust compliance policy.

CAP EAST CONNECTOR – ACES SHUTTLE: PROJECT SCOPE AND OUTLOOK

The next 15 years in transportation will be more transformative than any time in our history

- Highly automated vehicles will begin to enter and disrupt the market
- Downtown cores and interstates will be the first movers
- Crashes will decrease and the types of crashes in the mix will change
- The transition offers many challenges and unanswered questions

Wisconsin School of Transportation
WISCONSIN STATE UNIVERSITY
MADISON, WISCONSIN

ACES and the Future of Transportation

Advanced Driver-Assistance Systems (ADAS)

Blind Spot Camera
Alerts you a blind spot before your car when backing up.

Automatic Emergency Braking System
Helps brake for you if a front end crash is imminent.

Adaptive Cruise Control
Helps you know what cars might be closer to than you'd expect.

Lane Departure & Lane Keeping System
Alerts you if you're drifting out of your lane and may steer you back.

Automatic Parallel Parking
Helps you when changing into a parallel spot. You control steering, it controls steering.

MyCarDoesWhat.org
A website that answers all your questions about new car safety technologies. ...and so much more.

ACES and the Future of Transportation

SAE Levels of Vehicle Automation

0	1	2	3	4	5
No Automation	Driver Assistance	Partial Automation	Conditional Automation	High Automation	Full Automation
Driver performs all driving tasks.	Vehicle can control the driver's foot, hand, and steering wheel functions, but driver remains in the vehicle, ready to take control at any time.	Vehicle has limited, automated functions. Like acceleration and steering, but the driver must remain ready to take control at any time.	Driver is alerted & has to take control of the vehicle at any time. The driver must be ready to take control of the vehicle at any time.	The vehicle can perform all driving functions under all conditions. The driver may take the vehicle to control the vehicle.	The vehicle is capable of performing all driving functions under all conditions. The driver may take the vehicle to control the vehicle.

21

ACES and the Future of Transportation

Why do people prefer personal mobility?

- Instant availability
- Point-to-point direct access
- Personal accoutrements
- Perception of time savings / actual time savings
- Perception of cost savings / actual cost savings
- Perception of increased safety / actually safer
- They've always done it that way

- To key to improve usage of shared mobility
 - more options need to be available

ACES and the Future of Transportation WISCONSIN UNIVERSITY OF MADISON

22

ACES and the Future of Transportation

Shared Mobility Options

- Traditional sharing – public transit (bus/rail), taxi cabs
- Car sharing – Zipcar, car2go
- TNCs (Transportation Network Companies) – Uber, Lyft
- New business models – Turo, taxi apps
- New vehicles – automated microtransit, Hyperloop, delivery bots
- Complementary modes – Scooters, e-bikes, moped, bike share

ACES and the Future of Transportation WISCONSIN UNIVERSITY OF MADISON

23

ACES and the Future of Transportation

Mobility as a Service (MaaS)

- Single payment system for multiple modes
- Applications compare fastest/cheapest routes
- Automated fare systems
- Integration of private transit modes
- Incentives for car sharing
- Complete trip integration

32

Trucking Industry Today

- § Trucks move **71.4% of all freight** tonnage in the U.S.
- § Freight volumes have continued to rise since the Great Recession
- § **Median driver age is 47** in trucking industry, compared to 42 for all industries
- § Shortage of drivers for last 15 years
 - 2018: **60,800 drivers short**
 - 2028: projected **shortage of 160,000**
- § Shortage is amplified by the struggle to find qualified drivers
- § Causes of Shortage
 - Driver Demographics – Age
 - Lifestyle – Extended Periods Away
 - Job Alternatives

Platooning

Secondary truck
Fuel savings
up to 20%

Trucks travel about
30 feet apart

Lead truck
Fuel savings
up to 4.5%

Reduction in aerodynamic drag
provides fuel savings for both trucks

Lead truck
Controls acceleration and
braking for both trucks

SAATCHI THE WORLD HERALD

- § Maintain distance via wireless communication, radar, and GPS
- § Primarily performs "straight-line" adjustments
- § Alert driver is still needed, especially for direction changing maneuvers
- § 5-10% reduction in fuel cost, can be more or less depending on length

Milliman These slides are for general informational purposes only and shall not be considered as specific advice. As such, no action or decision should be taken solely on the basis of the information set out herein without obtaining specific advice from a qualified advisor. 36

36

Platooning

Pros

- § Fuel savings
- § Less roadway congestion
- § Reduced accidents

Cons

- § Multiple truck accidents
- § Prevent other vehicles from changing lanes
- § Wireless communications could be compromised

Photo: The Verge

37

Retrofit / After-Market Sensors

This is a retrofit of a Volvo truck

Otto's Retrofit Kit included:

- § 3 LiDAR units
- § Radar
- § High-precision camera(s)
- § Power steering
- § Braking system
- § GPS / Mapping data
- § Custom computer

Apply to any truck built after 2013

Estimated Price: ?

38

Retrofit / After-Market Sensors

Pros

- § Utilize current fleet
- § Less frequent stops
- § Driver is able to multi-task
- § Maybe attract more drivers

Cons

- § Risk of software failure
- § Not enough real-world testing yet
- § May end up costing more than initially anticipated

Photo: Wired

39

Originally Manufactured

Pros

- § Theoretically more reliable
- § Less frequent stops
- § Driver is able to multi-task or even be removed from cab
- § Possibility for electric

Cons

- § Risk of software failure
- § Mostly conceptual / Limited on-road testing
- § Could be very costly

Photos: AutoBlog / Forbes

44

Commercial Auto

- § Deterioration driven by
 - § Nuclear verdicts
 - § Distracted driving
 - § Inadequate safety precautions
 - § Slow to adapt current tech and modeling techniques
- § Loss adjustment expense growth due to costlier litigation
- § Litigation is a serious concern
 - § Social inflation
 - § Litigation financing

Source: AM Best

45

- § Compounded rate increases in recent years (some carriers had consecutive double digit increases)
- § COVID impact
 - § Exposure change depends on industry
 - § Less traffic = Lower Freq, Higher Sev
- § Focus on implementing technology to help monitor driving and increase efficiency
- § **TELEMATICS IS KEY!**

46

Commercial Auto

- § Driver error causes about 90% of crashes
 - u Roughly 70% in the case of trucks
- § About 4,136 people died in large truck crashes in 2018
 - u 67% were passenger vehicles occupants
 - u 16% were large truck occupants
- § Driver fatigue is often a contributor
 - u Federal hours-of-service regulations restrict the time on the road
 - u Surveys indicate some drivers violate this
- § Loaded trucks go 20-40% farther than cars when braking

Source: Insurance Institute for Highway Safety

47

Commercial Auto w/ CAV

- § Driver error causes about 90% of crashes **+Reduced but not eliminated (1/3)**
 - u Roughly 70% in the case of trucks
- § About 4,136 people died in large truck crashes in 2018 **+Less crashes?**
 - u 67% were passenger vehicles occupants
 - u 16% were large truck occupants **+Driver may not be in cab or in a safer position**
- § Driver fatigue is often a contributor **+Driver could rest in cab (level 4+)**
 - u Federal hours-of-service regulations restrict the time on the road
 - u Surveys indicate some drivers violate this
- § Loaded trucks go 20-40% farther than cars when braking **+Quicker response**
- Cyberattacks on moving vehicles causing crashes, Terrorism**

Source: Insurance Institute for Highway Safety

48

Commercial Auto

- § 5,977 pedestrians died in vehicle crashes in 2017
 - u Estimated that an additional 137,000 sent to emergency room
 - u 1.5 times more likely to be killed in car crash than passengers
- § 47% of pedestrian deaths involved alcohol
 - u 17% driver is >.08 BAC
 - u 33% pedestrian is >.08 BAC
- § Typical characteristics of pedestrian accidents
 - u Urban areas
 - u Non-intersection
 - u Night

59

Insuring Autonomous Vehicles

- § Some manufacturers have announced that they will accept responsibility for accidents due to malfunction
 - Generally seem to be self-insuring this risk due to lack of coverage options
- § At least one insurer has explicitly said that it is willing to write policies for autonomous vehicles (AXA XL), others have policies in the works
 - Could include liability, property damage, theft, cyber, care/custody/control, and business interruption
- § Manufacturers have shown interest in creating their own auto insurance programs
 - Could help sell AV with limited insurance options

Milliman Source: AXA XL. These slides are for general informational purposes only and shall not be considered as specific advice. As such, no action or decision should be taken solely on the basis of the information set out herein without obtaining specific advice from a qualified advisor. 60

60

Insuring Autonomous Vehicles

- § Changes in underwriting and pricing strategies
 - Shift from focus on driver to focus on technology and maintenance
- § Changes in policy language
 - Could lead to policy gaps if not careful
- § Speculative Liability Structures
 - Status Quo & Subrogation / Product Liability First / Others
- § New Boutique Insurance Products

Milliman These slides are for general informational purposes only and shall not be considered as specific advice. As such, no action or decision should be taken solely on the basis of the information set out herein without obtaining specific advice from a qualified advisor. 61

61

Insurance Complications

- § Assignment of risk
 - Is the manufacturer liable? If so, which manufacturer (sensors, software, truck)?
 - Determining percentage of driver error?
 - Was the vehicle properly maintained leading up to the accident?
- § Lack of data
- § Lack of available coverage
- § Structure of Liability
 - Status Quo & Subrogation
 - Product Liability First

63

ACES and the Future of Transportation

Benefits of ACES / CAVs

- **Connected Vehicles (CVs)**
 - Less time spent stopped at signals
 - Enhanced safety at intersections, in work zones, and in adverse weather
 - Reduced congestion without building more roads
- **Advanced Driver Assistance Systems (ADAS)**
 - Increased safety of specific driving tasks
 - Increased fuel efficiency / reduced emissions
- **Automated Vehicles**
 - Time freed from driving task for other tasks such as work, interaction with passengers, viewing scenery, sleep, etc.
 - Vehicle sharing increases / ownership not as necessary
 - Mobility options for those currently unable to drive
 - Decreased congestion?

68

68

ACES and the Future of Transportation

(An) AV Timeline

- 2015
 - driver assistance common
 - some partial automation available to consumers
- 2020
 - limited / conditional AVs widely available to consumers
- 2025
 - autonomous shared mobility fleets are common
- 2030
 - high automation required in all new vehicles
- 2040
 - human operation is the exception in many places
- 2060
 - transition to driverless largely complete
 - fleet turnover continues...
- 2100

- Any estimate is debatable
- We are only at the beginning of a long transition period

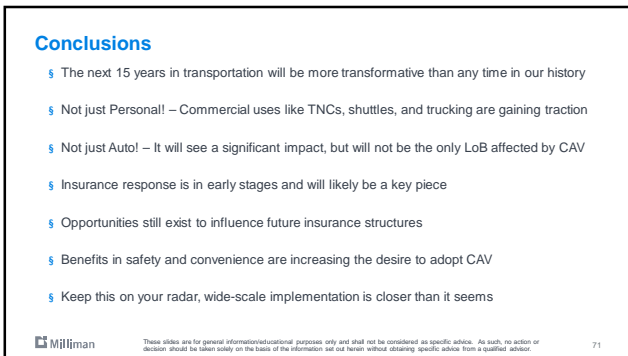

2063?
