

Automation, Data Science and Actuary-Underwriter Collaboration

Jeremy Achin | Data Scientist & CEO | DataRobot

CAS In-Focus Seminar

Expanding the Toolset – Underwriting Collaboration

Boston, MA, October 22 – 23, 2015

Today's Talk

- 1. The Elephant in the Room**
- 2. Why data science (now)?**
- 3. Data Science Roles for Actuaries and Underwriters**
- 4. Call to Action (Embracing Reality)**

The Elephant in the Room

**OH YOU'RE AN INSURANCE
UNDERWRITER?**

**TELL ME AGAIN HOW MISERABLE YOUR
LIFE IS BECAUSE OF AGENTS LIKE ME
WHO WORK TO ENSURE YOU HAVE A JOB**

**I DONT ALWAYS CHECK
INCOME AND ASSETS**

**BUT WHEN UNDERWRITING
DOES, THEY GET
DECLINED**

Inevitability of Automation

The
Economist,
May 2015

Harvard
Business
Review,
June 2015

Automation has been an integral part of our civilization

ERA ONE 19TH CENTURY

Machines take away the **dirty and dangerous**—industrial equipment, from looms to the cotton gin, relieves humans of onerous manual labor.

ERA TWO 20TH CENTURY

Machines take away the **dull**—automated interfaces, from airline kiosks to call centers, relieve humans of routine service transactions and clerical chores.

SOURCE THOMAS H. DAVENPORT AND JULIA KIRBY
FROM “BEYOND AUTOMATION,” JUNE 2015

Let's look at the auto industry ...

... it is not stopping here: **Self-driving Cars**

3rd Generation of Automation

Decision making with machines: Intelligent Systems

How may I help you,
human?

Here comes automation.

What are my options?

OR

HOW YOU ADD VALUE

1
STEP
UP

You may be senior management material—you're better at considering the big picture than any computer is.

2
STEP
ASIDE

You bring strengths to the table that aren't about purely rational, codifiable cognition.

3
STEP
IN

You understand how software makes routine decisions, so you monitor and modify its function and outputs.

4
STEP
NARROWLY

You specialize in something for which no computer program has yet been developed (although theoretically it could be).

5
STEP
FORWARD

You build the next generation or application of smart machines—perhaps for a vendor of them.

Automation in Insurance

Prioritization: How to scan through millions of potential consumers to choose the right few

Pricing: Equating risk and price, avoiding adverse selection

Estimation of Claims: Better management of claims and cash flow

Inspection: How to select top 10% of your selected risk to manually review / inspect further

Identifying fraud: Identifying claimants with highest likelihood of being fraud and review them manually

... Enter Data Science

- **Making better decisions**
- **Making faster decisions**

... Why now?

Data is everywhere and data science generates value from data

“Data is an emerging asset class” – World Economic Forum

“90% of the data in the world today has been created in the last two years alone”

traditional
data

non-traditional
data

data
science

better
product

better service

improved
operations

Absolutely insane amounts of **computational power**

Increasingly inexpensive and smart storage & computational environment

1982 Osborne PC weighs 100 times as much, has 500 times the volume, costs 10 times as much – with 1/100 of processing speed, 1/100000 memory of a typical 2010 smart phone.

Next generation tools, platforms, and approaches to data science

Traditional Approach

- Ivy league approach - only for the chosen ones
- Focused on activities - detached from outcomes
- Assumption based: model selection is based on modeler's understanding of the world?
- Development is costly and limited
- Heavy dependence on programming

Data Science Approach

open source
programming

github
SOCIAL CODING

social network of
coders

automated
solutions

- Common man approach - for everyone
- Focused on business outcome
- Validation based: model selected if it predicts well in real world
- Development is crowd sourced, peer reviewed
- Automated solutions are taking care of programming

Why Data Science is a must for my organization?

- **Information asymmetry: whoever knows it first - wins ("better decisions")**
 - **Your competitors** are investing heavily on data and data science - that will help them choose and retain the most valuable segment of customers.
 - **Your customers** are becoming more self-aware than ever before - and the most valuable ones will leave you - if not properly valued.
- **Operational efficiency drives profitable growth ("faster decision")**
 - Data Science helps how you spend your marketing money, targeted underwriting and acquisition, prioritize and triage inspections, manage claims, detect frauds and even manage your workforce.

Why Now?

- **More Data**
- **More Computational Power**
- **Better (more accessible) Tools**
- **Your competitors are doing it and your customers expect it!**

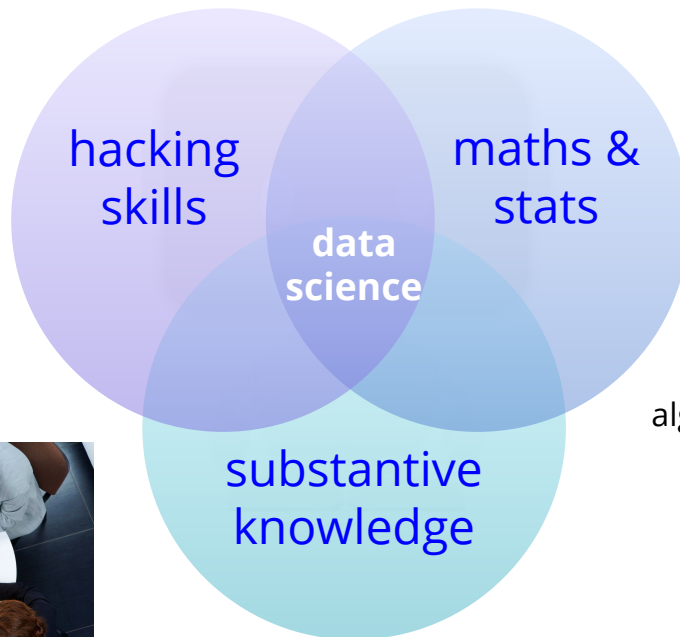

A Guide to Finding Data Scientists for Your Company

Data Scientist Defined

programming & data
manipulation

understanding of
algorithms and validation
framework

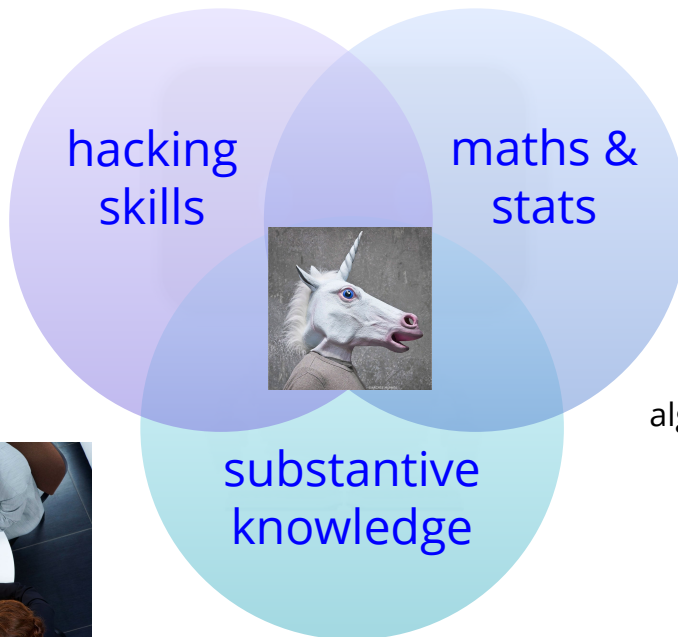

business knowledge + company data

Data Scientists are Rare

programming & data
manipulation

understanding of
algorithms and validation
framework

business knowledge + company data

“Unicorns are Lame” *-quote by: nobody ever.*

Job Trends from Indeed.com

— "data scientist"

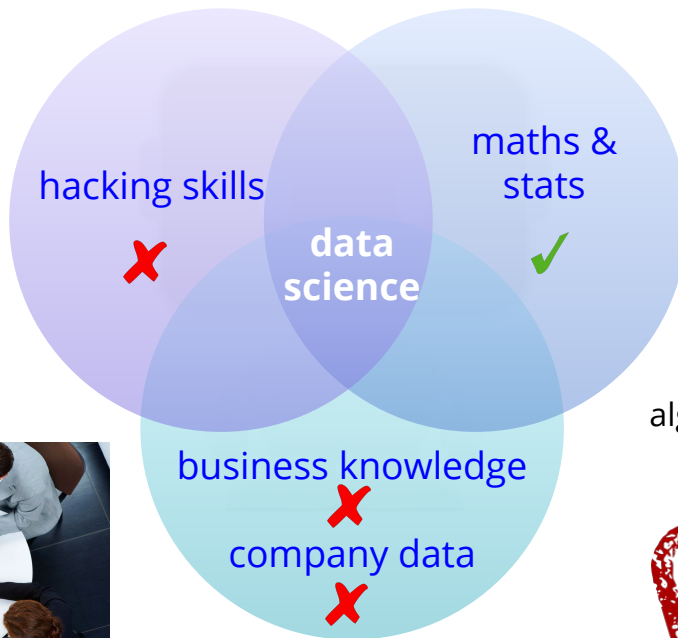

Hiring Real Unicorns is Expensive! \$\$\$\$\$\$\$\$\$\$\$\$\$\$
Also, Many People Pretending to be Unicorns.

Can traditional *statisticians* take this role?

programming & data
manipulation

understanding of
algorithms and validation
framework

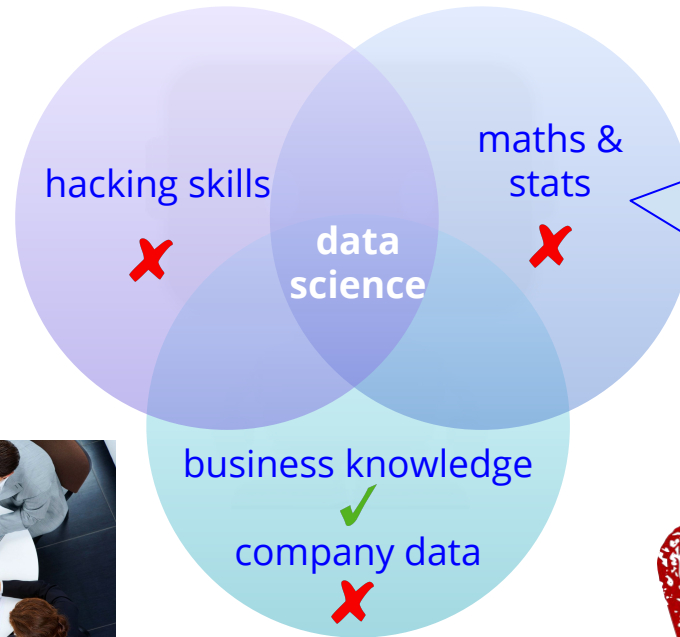

business knowledge + company data

**MEDIUM
POTENTIAL**

Can *MBA / business graduates* take this role?

programming & data manipulation

95% of all MBA's think they have above average Math and Stats skills among their peers.

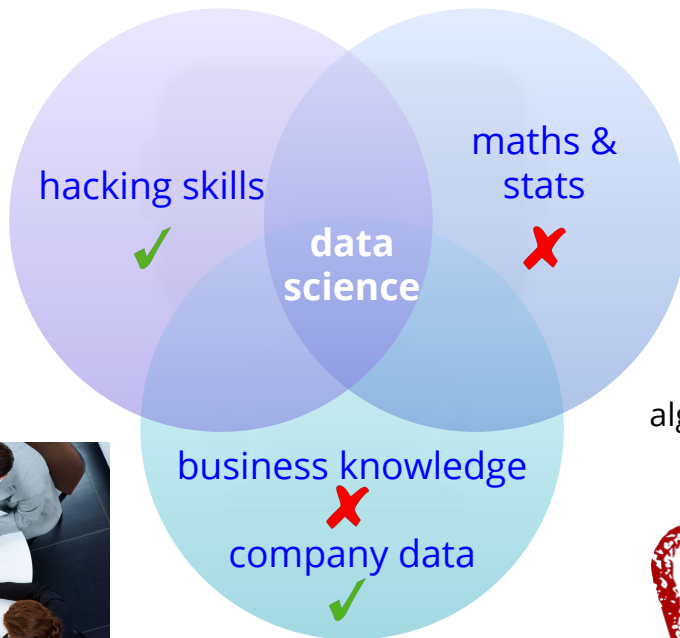

business knowledge + company data

MEDIUM POTENTIAL

Can *IT data specialist* take this role?

programming & data manipulation

understanding of algorithms and validation framework

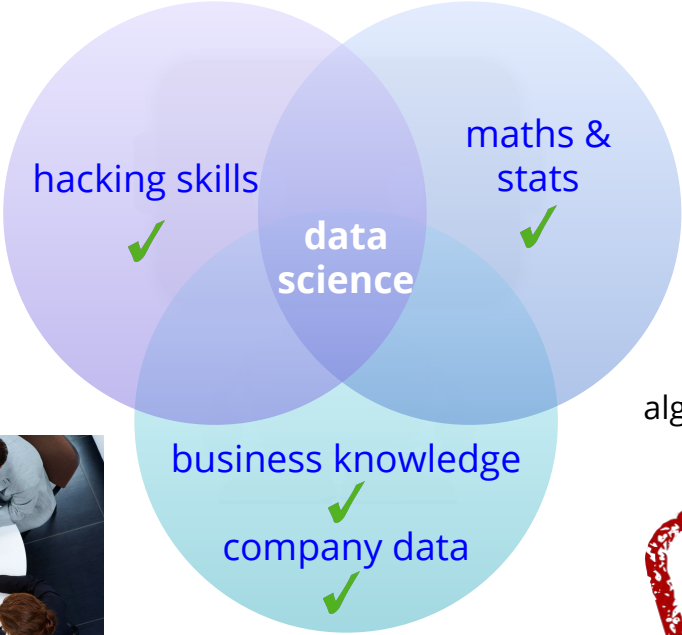

business knowledge + company data

MEDIUM POTENTIAL

Can a team of statistician + MBA + IT data specialist pull it off?

programming & data manipulation

understanding of algorithms and validation framework

business knowledge + company data

HIGH POTENTIAL

Can a *team of statistician + MBA + IT data specialist* pull it off?

Orchestration is difficult ...

... and it may turn out like this.

**LOW
POTENTIAL**

Clearly difficult to find data scientists.

Is there hope?

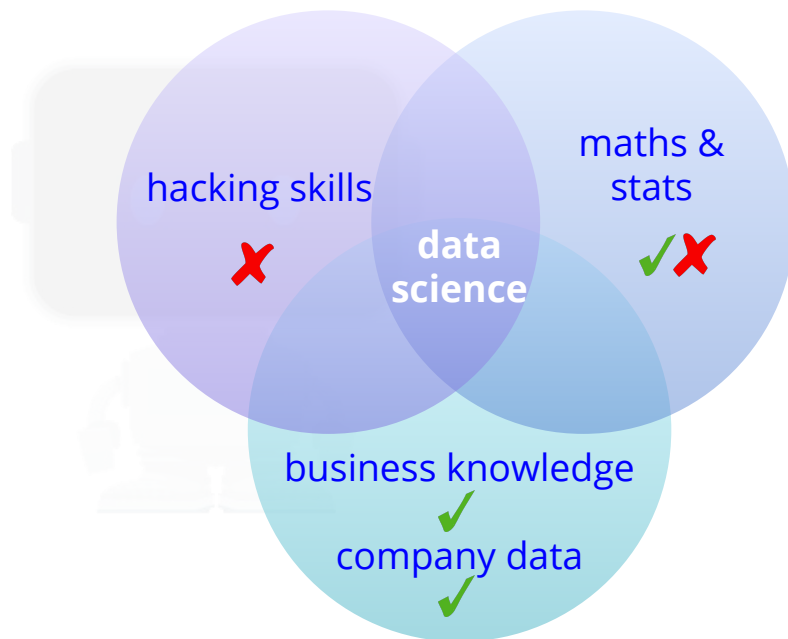

Quiz: What profession has the following traits?

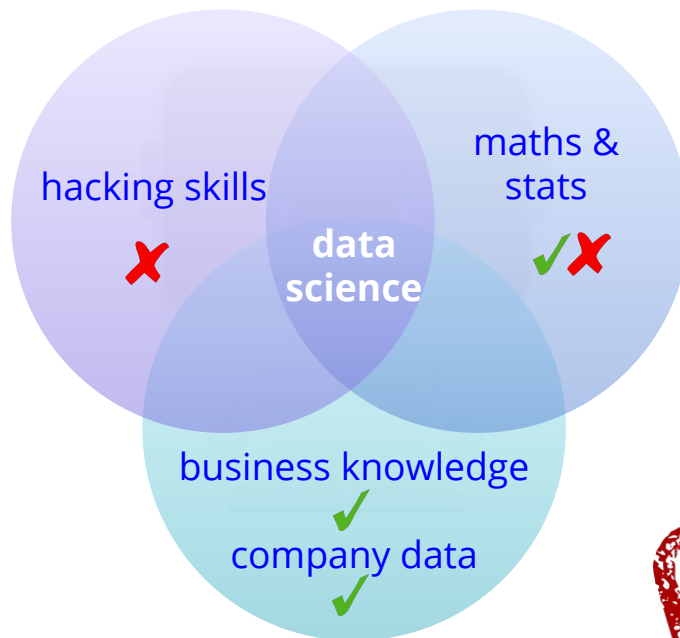

1. Math and Stats Background

2. Deep Understanding of the Business

3. Familiar with Company Data

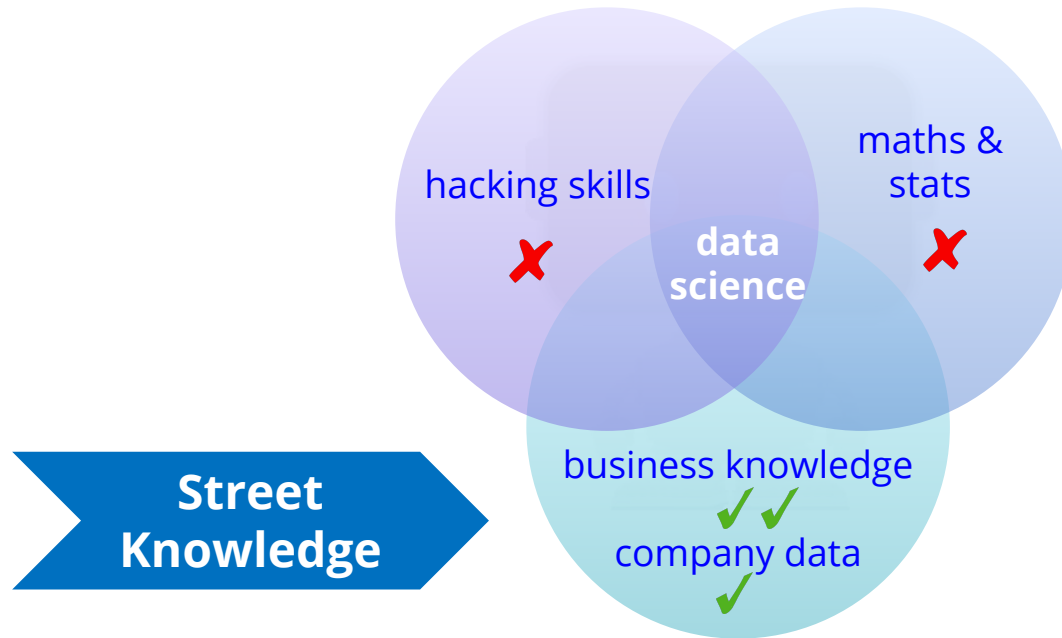

Actuaries!

**High
POTENTIAL**

... What about **Underwriters**?

Modern Tools and Collaboration Fill in The Gaps

programming & data
manipulation

*let machines do the
coding...*

*Actuaries collaborate with
Underwriters:*

- *Right question to solve*
- *Right data to answer the question*
- *Experimentation and socialization*

business knowledge
company data

understanding of
algorithms & validation
framework

- *off-the-shelf
algorithms from
open source.*
- *working
knowledge is
sufficient.*

How actuaries and underwriters can collaborate to maximize the value of data science and automation?

Insurance product spectrum: Big-data to No-data problem

emerging risk:
no data, cold start

large risk:
small, highly
heterogeneous data

commercial underwriting:
statistical benchmark,
anchoring → UW adjustments

**property (home)
insurance:**
large, changing data

personal auto:
large, homogeneous data

UNDERWRITERS

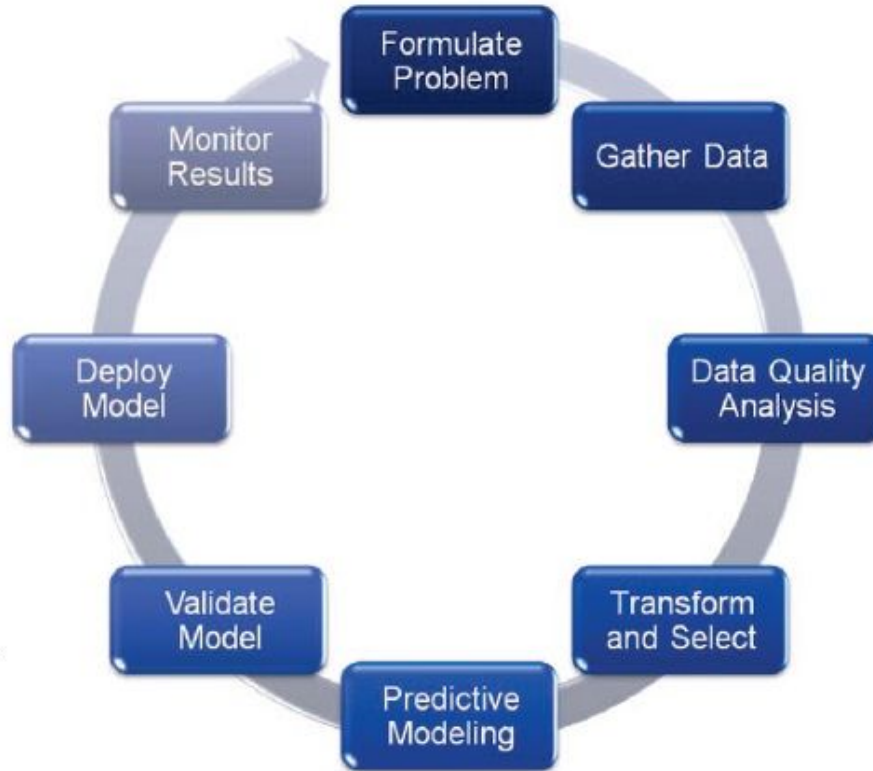

ACTUARIES

Why collaboration is essential?

- **No-data problem**
- **Large-data problem**
- **Street knowledge augments statistical models**

Underwriters are essential for a successful data science project

Real Life Example

Single Car Policy

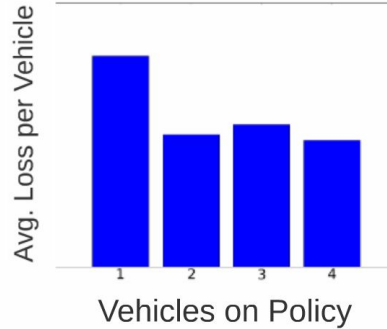

vs.

Mult-Car Policy

What we expect

Prior Knowledge and intuition tells us that single car policies are more risky than multi-car policies

What data says

...but data tells a different story

Real world example cont...

Original Cars on Policy = 1

vs

Cars on Policy = 2

How do we learn data science and drive automation?

Where should you focus?

Activity	Tool/ Platform/ Source	Learning Focus
Data manipulation & General programming		<ul style="list-style-type: none">- data manipulation- key statistical packages- key visualization packages
Visualizations		<ul style="list-style-type: none">- visualize data by drag & drop- productize your solution
Automated Modeling, Machine Learning		<ul style="list-style-type: none">- defining the right question- interpreting results- running experiments using the automated platform

There is still value in gaining a deeper understanding. Great resources for learning about data science:

Learning data science: useful hands on courses (there are many more out there!)

Machine Learning by Andrew Ng (Coursera):

<https://www.coursera.org/learn/machine-learning>

<https://www.udacity.com/course/intro-to-computer-science--cs101>

<https://www.coursera.org/course/rprog>

Takeaways

Call to Action: Take the Unicorn by the Horn

<i>Who</i>	<i>Takeaways</i>
Actuarial Students and junior Underwriters	<ul style="list-style-type: none">- learn data science skills. Learning by doing is best.- take active part in the learning community
Managers	<ul style="list-style-type: none">- learn enough data science to manage actuarial data scientists- encourage actuarial students and junior UWs to learn basic data science
Exam Committee (CAS, CPCU)	<ul style="list-style-type: none">- include data science learning objectives in exam curriculum- encourage hands-on learning

Suggestions

Actuaries should spend few months as an underwriter!

Underwriters should develop some basic data science skill sets and capabilities for using data science tools!

Embrace Reality

Insurance product spectrum: Big-data to No-data problem

emerging risk:
no data, cold start

large risk:
small, highly
heterogeneous data

commercial underwriting:
statistical benchmark,
anchoring → UW adjustments

**property (home)
insurance:**
large, changing data

personal auto:
large, homogeneous data

UNDERWRITERS

ACTUARIES

With Modern Tools, Data Science isn't that Hard
