2 WINGS RISK SERVICES

Ideal Actuarial System

An ideal data visualization solution is a

a) transparent to users and b) highly efficient

storage/retrieval system for

c) structured data (objects) with

d) an extremely flexible, e) computationally

complete, f) open

calculation engine and

g) integrated, h) automated and i) interactive

report generator

Human perception

Relies heavily on **Short-Term Memory**.

Problems with STM:

- Can hold only **5-7** similar items at once
- It's a "**buffer**": new info erases old information
- Even without distractions can hold info only for **30 seconds**

Data-Driven Technologies

- Adaptive Reporting
- Visualization
- Alarm Systems

Adaptive Reporting

- Adaptive Reporting
 - Filtering
 - Sorting
 - Outlining
 - Conditional Formatting
 - OLAP-enabled tools

Adaptive Reporting: **Filtering**

- Auto-Filter in Excel
 - Plain-Vanilla Filtering
 - Checking Distinct Values
 - Adaptive Filtering (through VBA)

Adaptive Reporting: **Outlining**

- Outlining in Excel
 - Hierarchical view
 - Different level of details
 - Subtotals
- Master-Detail relationship in Access

Adaptive Reporting: **Sorting**

- Does not reduce amount of information displayed
- Brings **most important** info on top or up front
- Requires definition of ***importance***

Adaptive Reporting: **Dynamic Formatting**

- Conditional Formatting in Excel
 - allows users to define
 - font
 - color
 - border
 - background pattern
- of a cell **as a function** of the values in other cells

Adaptive Reporting: OLAP

- Pivot Tables and OLAP cubes in Excel
 - Combine
 - Filtering
 - Outlining
 - Sorting
 - Add on-the-fly processing
 - Calculated Field
 - Calculated Item
 - Data Source is not limited by 65,536 rows

Visualization: **Maps**

- Maps in Microsoft

- MapPoint:

- Colors
- Shapes
- Glyphs
- Isosurfaces
- Links to Office applications
- VBA

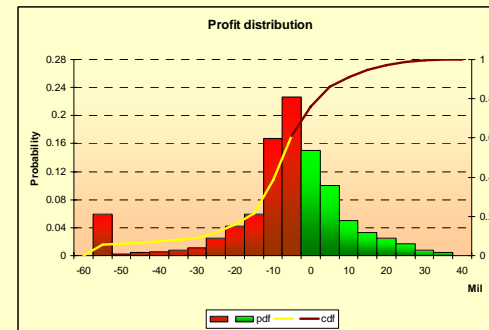

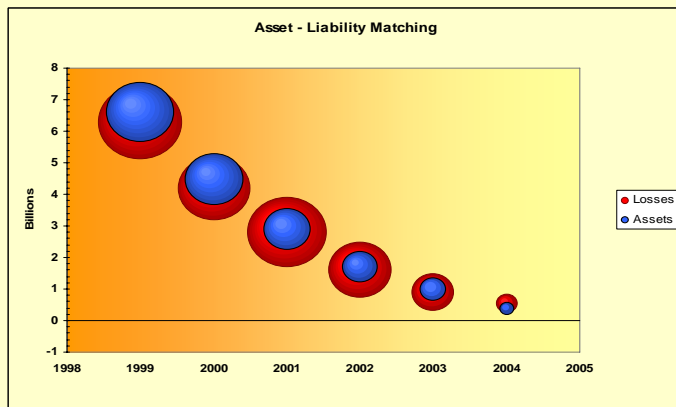

Alarm Systems: Algorithms Applicability

- Statistical assumptions testing
 - Mack
 - Murphy
 - Zehnwirth

Alarm Systems: **Digital Dashboard**

- Portal to the most important info
 - Corporate
 - Professional
 - Personal
- Dashboard's space limitations re-emphasize the **necessity** of space-conscious reporting techniques!

Max ROE per Capital

Max ROE per (Capital) 2

Still the best

Actuarial IQ Recap

- EDA and ways to present information are two of the sections of the paper
- The paper is an introduction to Data Quality and Data Management written by the CAS Data Management Educational Materials Working Party
- It should be published in Winter 2008 Forum
- What every actuary should know about data quality and data management
- Plus some hands-on techniques

Session Conclusion

- Horror stories and motivation to improve data quality
- Described data quality and data management
- Introduced upcoming paper: “Actuarial IQ”
- Hands-on techniques for data cleansing and better presentations
