...claim cost around Europe differ substantially

Market trends: Across Europe we have observed an increasing number of claims being reported

Market Issues

- High inflation, particularly of noneconomic damages
- Law firms actively "marketing" their services
- Creation of new types of damages
- Increasing cost of defensive medicine
- Increasing public awareness

Consequences

- For hospitals:
 - Higher cost (liability awards and insurance premiums)
 - Higher policies retentions
- For insurance companies
 - Substantial losses
 - Price increases
 - Lack of capacity
 - Unhappy costumers

Insurance companies have been slow to recognize these issues in reserving and pricing

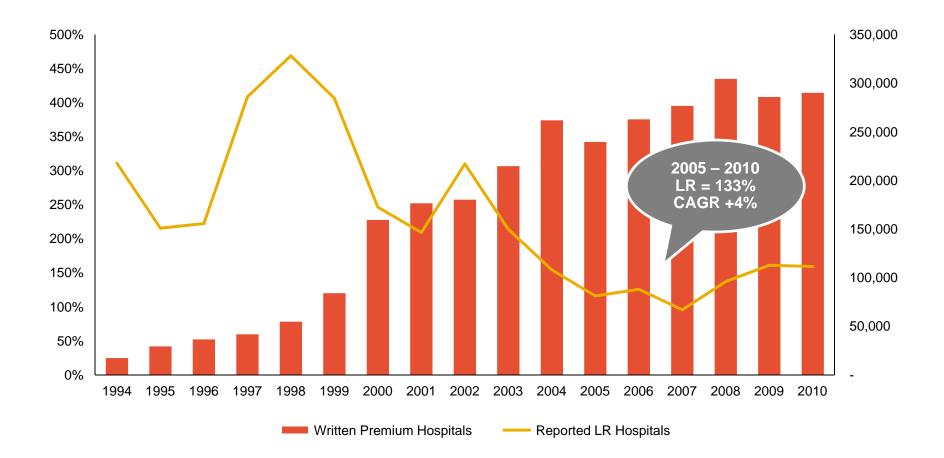

Some challenges the market has faced in the past

Long latency	Inadequate claims-made clauses	Inappropriate pricing for extended exposure
Underestimation of claims inflation	Multi-Year policies	Lack of adequate information to manage risk
	Inadequate claims management strategy	

Some challenges for the future

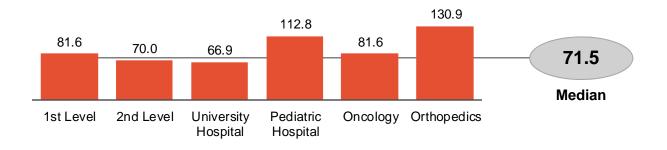

Italian med mal has been gaining the reputation of a toxic line due to very poor performance

....with some notable differences and areas of convergence

Feature	Europe	United States
Compensation	State health systems and employment liability	Manufactures and Producers, Product and premises liability
	Few companies named in each action	60 or more companies named in each action
	Today's policies may respond	Asbestos is currently excluded
	Between €50 and in excess of €1 Mil.	Substantially Higher
Litigation Environment	Civil trials, with no jury	Jury are more subjective
	Proof of disease, not all may impact insurance	Majority of compensation was for non- impaired claimants
	Contingent fees generally not allowed (no- win, no-fee in U.K.)	Contingent fees up to 40% of awards
	Forum shopping not relevant in most countries	Research for more favorable jurisdictions
	Number of Union screenings is rising	Union and Lawyers screening, plus more litigious culture
	Class actions are generally not allowed	Class actions

Asbestos-related claims are being compensated by the European insurance industry through different systems...

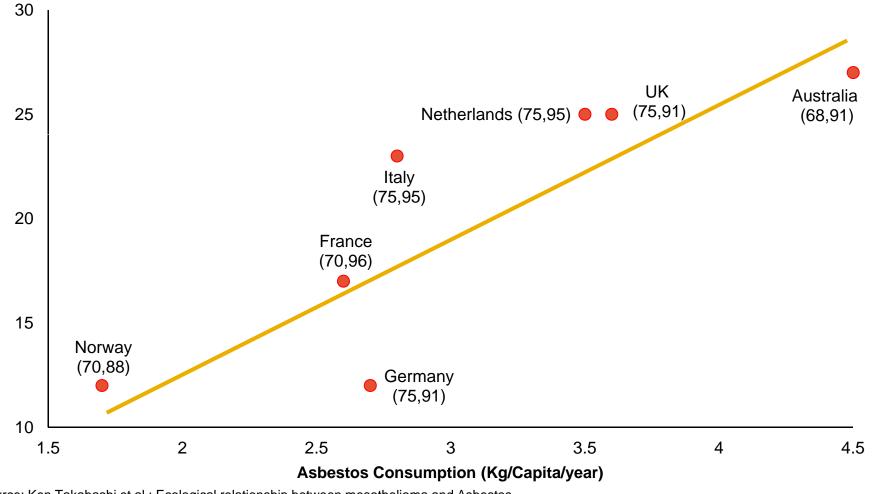

- Occupational diseases can be compensated through:
 - No-fault: Workers compensation or social security
 - **Tort:** Employers liability, public liability or general/products liability
- The potential sources of compensation differ not only in what must be proven, but also in the damages they will compensate
- Differences exist between the various EU countries. In general, no-fault systems do not pay for non-economic losses, which are, at least in theory, available from the tort system

...With a different impact by country

U.K. and the Netherlands are the most impacted; developments in Italy and France make it particularly at risk

Mesothelioma Incidence

Mesothelioma Claims Severity Types of Damage

Conclusions

- Liability trends in Europe are resembling the U.S. environment; claims inflation is higher in countries where level of compensation is below average
- Claims inflation tends to rise more than CPI and GDP
 - It is important to factor inflation assumptions explicitly into reserving models and time lag of recognition into pricing
- Local issues are often understated
 - It is key to understand evolution of local regulation and tort system and to properly estimate the impact on pricing and contract terms and conditions
