- 4 Benchmarking
- 5 Next Steps

OVERVIEW

A new data source: [Imperial-IICI dataset](#)

- Insurance Intellectual Capital Initiative (IICI)
 - Bronek Masojada (Hiscox), James Slaughter (Liberty Mutual), Rob Caton (Hiscox)
 - Lloyd's of London
- Focus on Large Commercial Risks (LCR)
 - Commercial Property, On-shore Energy; non-natural hazards

OVERVIEW

A new data source: [Imperial-IICI dataset](#)

- Insurance Intellectual Capital Initiative (IICI)
 - Bronek Masojada (Hiscox), James Slaughter (Liberty Mutual), Rob Caton (Hiscox)
 - Lloyd's of London
- Focus on Large Commercial Risks (LCR)
 - Commercial Property, On-shore Energy; non-natural hazards

Implications for **reserving** and capital **modeling** (joint work with Davide Benedetti, Erik Chavez [Imperial]; with Andreas Milidonis [Nanyang] for Asia-Pacific region)

- Tail risk estimation
- Benchmarking exercise (market loss curves & scaling factors)

LCR largely **non-modelled** risks

- **Heterogeneity** of exposures by type and size
- **Complex** relation between hazard events and losses
- **Paucity** of data for model estimation/validation

Implications

- Considerable degree of **judgment** in pricing/reserving decisions
- Reported claims may not reflect **true risk** of business
- Pricing **variability** makes it difficult for corporates to budget for insurance

AGENDA

- 1 Overview
- 2 Dataset
- 3 Estimation
- 4 Benchmarking
- 5 Next Steps

DATASET

- Around **3,200 FGU claims** and **exposures** based on brokers' submissions
- Scope: **worldwide, 1999-2012**

DATASET

- Around **3,200 FGU claims** and **exposures** based on brokers' submissions
- Scope: **worldwide, 1999-2012**
- Granular classification of exposures by three **occupancy levels**
 - Definitions based on Lloyd's codes & individual syndicates' classification; can be related to ISO/PSOLD classification
- Anonymized **claim narratives** available
- Example:

Region	Country	Risk Code	Occupancy 1	Occupancy 2	Occupancy 3
NoA	US	P2 (Physical damage for primary layer property; USA; excluding binders)	RE (residential)	R (residential)	51 (Large Hotels)

OCCUPANCY EXAMPLE - LEVEL 2 LIST

Code	Definition	Code	Definition
A	Miscellaneous	Q	Offices/Banks
B	Manufacturers/Processors	R	Residential
C	Chemicals/Pharmaceuticals	T	Transport
D	Bridges/Dams/Tunnels/Piers	U	Utilities
E	Conglomerates	V	Telecoms and Data Processing
F	Food	W	Woodworkers (Sawmills, Papermills)
G	Grain	X	Onshore Crude
H	General Mercantile/Shops	Y	Onshore GasPlants
J	Mines	Z	Onshore Construction
K	Crops	2	Hospital/Health care centres
L	Auto	4	Semiconductor/Fabs
M	Metals	5	Motor Manufacturers
O	Municipal Property	6	Warehouses
P	Energy (Oil Refineries/Petrochemicals)		

GEOGRAPHICAL/OCCUPANCY SPLIT

AF (Africa), CA (Central Asia), EU (Europe),
LA (Latin America), ME (Middle East), AS
(Asia-Pacific), NoA (North America), OC
(Oceania), WW (Worldwide).

RE (Residential), CO (Commercial), MA
(Manufacturing), EON (Energy on-shore), Mi
(Miscellaneous).

OCCUPANCY SPLIT BY CLAIM SIZE

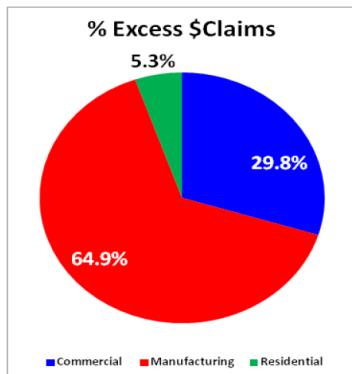

OCCUPANCY SPLIT BY TIV

OCCUPANCY SPLIT BY LOCATION

North America

Rest of the World

FGU claims > USD 1m

OCCUPANCY SPLIT BY LOCATION

North America

Rest of the World

FGU claims > USD 5m

VALIDATION

- Imperial-IIICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

All FGU claims

VALIDATION

- Imperial-IICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

FGU claims > USD 1m

VALIDATION

- Imperial-IICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

FGU claims > USD 5m

VALIDATION - Cross-occupancy comparison

- Imperial-IICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

US Large Fire Loss Experience by Occupancy (NFPA 20 years: 1991-2010)

Row Labels	Sum of Estimated Loss (in \$mm)	Count of Estimated Loss (in \$mm) ²	% Total Counts	US \$Ks Threshold 25mm	% Ks Threshold
Commercial	2,727.6	33	16.6%	1,903	15.2%
Aircraft	499.9	9	4.5%	185	1.5%
Cafeteria	27.7	1	0.5%	3	0.0%

Truck	119.4	1	0.5%	94	0.8%
Warehouse	3,355.8	36	18.1%	2,450	19.7%
Residential	689.0	15	7.5%	314	2.5%
Apartment	456.6	9	4.5%	232	1.8%
Condo	33.1	1	0.5%	8	0.3%
Residential	199.3	5	2.5%	74	0.6%
Grand Total	17,469.9	199	100.0%	12,495	100.0%

Very different Exposure and Large Loss distributions for Commercial & Manufacturing; Mfg with 31% of exposures, but 76% of the large losses (151 out of 199 >25M)

Source: National Fire Protection Association as compiled by ISO Verisk.

VALIDATION - Cross-country comparison

- Imperial-IIICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

- Using US as the base, compare # of large claims per \$B of total commercial property premium in excess of various thresholds. Shown are thresholds ranging from \$30M to \$150M
- Although varies significantly by country, the number of large claims on average is 40-50% higher than the US for these largest claims
- Protection/ sprinkler differences may account for a significant portion of the US vs. non-US experience

Source: ISO Verisk.

VALIDATION - NoA

- Imperial-IICI data vs. Property Size-of-Loss Database (PSOLD) [John Buchanan (ISO-Verisk)]

- Using US as the base, compare occupancy distribution of large losses using same definitions as underlying PSOLD-International
- On average, US has a larger proportion of large claims in the less severe occupancies, and less in the heavy and severe occupancies
- Occupancy mixes also account for a significant portion of the cross-country differences

Source: ISO Verisk.

AGENDA

- 1 Overview
- 2 Dataset
- 3 Estimation**
- 4 Benchmarking
- 5 Next Steps

TAIL RISK

Tail index (α) estimation: $\mathbb{P}(Z > z) \sim Cz^{-\alpha}$

TAIL RISK

Tail index (α) estimation: $\mathbb{P}(Z > z) \sim Cz^{-\alpha}$

- Existence of **centered moments** (mean, variance, etc.)
 - **Mean/Variance** finite if and only if $\alpha > 1$ ($\alpha > 2$)
- Extent of **diversification** benefits for quantile-based risk measures
 - Retain fractions w_1, \dots, w_n of risks X_1, \dots, X_n
 - Resulting aggregate risk $Z_{(w_1, \dots, w_n)} = \sum_i w_i X_i$
 - $VaR_p(Z_{(1,0, \dots, 0)}) < VaR_p(Z_{(\frac{1}{n}, \dots, \frac{1}{n})})$ for $\alpha \in (0, 1)$, $p \in (0, 1/2)$, for stable distributions (e.g., Ibragimov, 2009)

TAIL RISK

Tail index (α) estimation: $\mathbb{P}(Z > z) \sim Cz^{-\alpha}$

- Existence of **centered moments** (mean, variance, etc.)
 - **Mean/Variance** finite if and only if $\alpha > 1$ ($\alpha > 2$)
- Extent of **diversification** benefits for quantile-based risk measures
 - Retain fractions w_1, \dots, w_n of risks X_1, \dots, X_n
 - Resulting aggregate risk $Z_{(w_1, \dots, w_n)} = \sum_i w_i X_i$
 - $VaR_p(Z_{(1,0, \dots, 0)}) < VaR_p(Z_{(\frac{1}{n}, \dots, \frac{1}{n})})$ for $\alpha \in (0, 1)$, $p \in (0, 1/2)$, for stable distributions (e.g., Ibragimov, 2009)

What do we find for LCR?

- Heavy tails & significant heterogeneity across occupancy type

RESIDENTIAL EXAMPLE (ALL TIVs)

Hill (1975) vs. Gabaix-Ibragimov (2011)'s log-log rank-size regression method with optimal ranks shift $-1/2$ and correct standard errors.

OCCUPANCY LEVEL 1 (ALL TIVs)

OCCUPANCY LEVEL 1 (ALL TIVs)

OCCUPANCY LEVEL 3 - Large Hotels

OCCUPANCY LEVEL 3 - Institutional Housing, Condos, Housing Associations

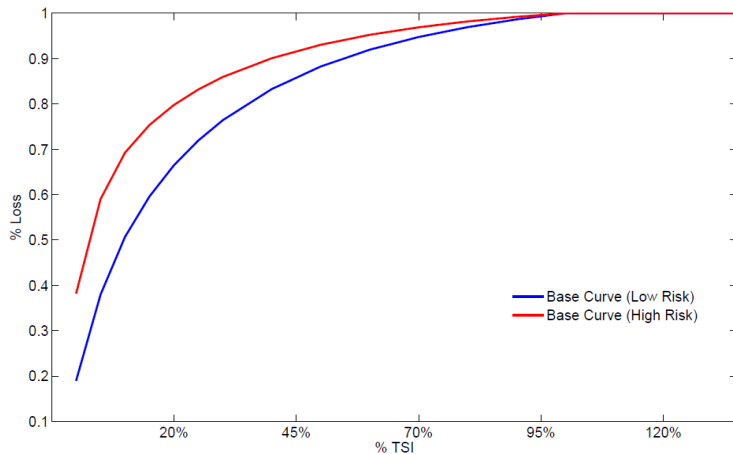

OCCUPANCY LEVEL 2 - Chemicals, Metals, Mines

LOSS CURVES HETEROGENEITY

Source: China Re CPRC curve comparison
MBBEFD (Y1-Y4) parametric approximation;
Lloyd's empirical from unknown data source

PSOLD has over 1 million individual curves
for 60 AOI bands, 38 occupancies, 4 sets of
perils, 50 states, etc.; some collapse to
between 500 and 1,000 curves

Source: John Buchanan (ISO-Verisk).

AGENDA

- 1 Overview
- 2 Dataset
- 3 Estimation
- 4 Benchmarking
- 5 Next Steps

NEXT STEPS

New data source for LCR

- Robust estimation of **tail risk**
- **Comparing** claim costs across occupancy/TIV bands/location

NEXT STEPS

New data source for LCR

- Robust estimation of **tail risk**
- **Comparing** claim costs across occupancy/TIV bands/location

Lessons from Imperial-IICI data collection, validation, and analysis

- Link between claims and exposures crucial: Systematic storage of claims & exposures information (policy schedules & claims narratives in digital, compatible format) should be a priority
- Macro-validation (e.g., Fire Protection Agencies) & micro-validation (e.g., syndicate level) of data important for *structural* understanding of risk
- Gains from data aggregation HUGE - **please contribute!**
