ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY COPYRIGHT LAW AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT AMB'S PRIOR WRITTEN CONSENT. All information contained herein is obtained by AMB from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. Under no circumstances shall AMB have any liability to any person or entity for (a) any loss or damage in whole or in part caused by, resulting from, or relating to, any error (negligent or otherwise) or other circumstance or contingency within or outside the control of AMB or any of its directors, officers, employees or agents in connection with the procurement, collection, compilation, analysis, interpretation, communication, publication or delivery of any such information, or (b) any direct, indirect, special, consequential, compensatory or incidental damages whatsoever (including without limitation, lost profits), even if AMB is advised in advance of the possibility of such damages, resulting from the use of or inability to use, any such information. The credit ratings, financial reporting analysis, projections, and other observations, if any, constituting part of the information contained herein are, and must be construed solely as, statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities, insurance policies, contracts or any other financial obligations, nor does it address the suitability of any particular financial obligation for a specific purpose or purchaser. Credit risk is the risk that an entity may not meet its contractual, financial obligations as they come due. Credit ratings do not address any other risk, including but not limited to, liquidity risk, market value risk or price volatility of rated securities. NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY AMB IN ANY FORM OR MANNER. WHATSOEVER. Each credit rating or other opinion must be weighed solely as one factor in any investment or purchasing decision made by or on behalf of any user of the information contained herein, and each such user must accordingly make its own study and evaluation of each security or other financial obligation and of each issuer and guarantor of, and each provider of credit support for, each security or other financial obligation that it may consider purchasing, holding or selling.

2015 Seminar on Reinsurance

Agenda

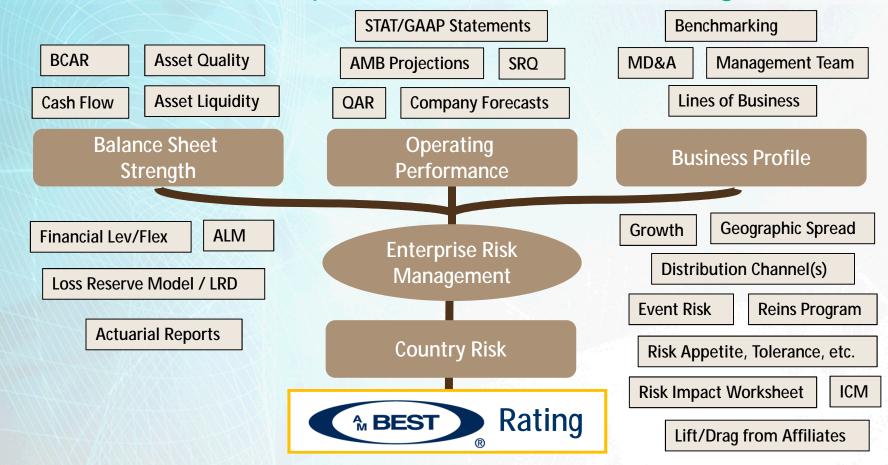

- AMB Rating Methodology role of BCAR in the determination of a credit rating
- Current BCAR structure
- Reasons for proposed changes
- Overview of proposed changes & work to date
- Preliminary observations
- Next Steps
- Proposed implementation time frame

General Rating Process

What is the relationship between BCAR and a rating level?

How is BCAR Used?

- As an analytical tool
- Indication of current balance sheet strength
- Proforma projections
- Stress tests...Natural Cats...Terrorism
- Other what if scenarios
 - Changes to reinsurance
 - Business acquisition or disposition
 - Changes in asset (or liability) mix
 - US government default
- Most important ... it is a basis for discussion

Current Structure – PC BCAR

BCAR Ratio = Adjusted Surplus / Net Required Capital

Adjusted Surplus (APHS)

Reported Surplus (PHS)

Equity Adjustments:

Unearned Premiums (DAC)

Equalization/Contingency Reserves

Loss Reserves

Assets

Debt Adjustments:

Surplus Notes

Debt Service Requirements

Other Adjustments:

Future Operating Losses

Potential Catastrophe Loss

Future Dividends

Goodwill

Other Intangible Assets

Minority Interests, etc.

Net Required Capital

Gross Required Capital (GRC):

(B1) Fixed Income Securities

(B2) Equity Securities

(B3) Interest Rate

(B4) Credit

(B5) Loss and LAE Reserves

(B6) Net Premiums Written

(B7) Off-Balance Sheet

Covariance Adjustment

Net Required Capital (NRC)*

*NRC= SQRT [$(B1)^2+(B2)^2+(B3)^2+(0.5*B4)^2+[(0.5*B4)+B5)]^2+(B6)^2$] + B7

Reasons for Proposed Changes

- More sophisticated and faster software available now
 - Simulations / probability curves
 - Economic scenario generators (ESGs)
 - Correlations / diversification
 - Company specific detail
 - Assets
 - Reinsurers
 - Profitability
 - Volatility

Reasons for Proposed Changes

- Metrics better understood and utilized by industry
 - Tail Value at Risk (TVaR)...aka Conditional Tail Expectation (CTE)
 - ü Average loss beyond a given threshold
 - ü Threshold is a percentile (ie 99%)
 - ü Considers size of losses beyond threshold
 - Value at Risk (VaR) ... aka Probability of Default ü Probability loss will exceed a given threshold
- Consistent confidence intervals across risks
 - 98%, 99%, 99.5%, 99.8%, 99.9%

Reasons for Proposed Changes

- Consistent Time Horizon for risk factors
 - Runoff to Ultimate basis for PC UW capital factors
 - ü Protects policyholders & claimants
 - ü No change from current view
 - Some risks will need to use duration of liabilities as indicator for ultimate risk
 - ü Credit risk on recoverables
 - Bonds duration of bonds
 - Common stocks one year

- Do not intend to change underlying view of the risks
 - Bonds default risk
 - Common stock price volatility
 - Reinsurance credit risk uncollectible recoverables
 - Pricing risk potential for UW loss on business written next year
 - Reserve risk potential for unanticipated adverse reserve development
- Do not intend to change the main structure of the model
- Goal is to generate risk factors using stochastic simulations from probability curves & ESG

- Phase 1 Bonds
 - Use Economic Scenario Generator
 - Update **bond default** risk factors
 - ü Reflect duration of company's bond portfolio (SRQ)
 - ü Reflect asset quality of company's bond portfolio (SRQ)
 - ü Reflect volatility in bond default assumptions (stochastic portion tied to ESG)
 - ü Only defaults occurring in first 10 years are considered
 - U Offset default with recovery on defaults (vary by rating)
 - ü Net defaulted amounts are present valued
 - ü Looked at TVaR metric
 - ü Currently looking at VaR metric

Bond Quality & Maturity SRQ question:

3b.FIXED INCOME PORTFOLIO ANALYSIS: Please complete the following Quality and Maturity Distribution of All Bonds Owned as of December 31, 2013. Please show US Governments on line 18, and show Parents, Subsidiaries, and Affiliates on line 19. Dollar amounts should be stated at Book/Adjusted carrying values (in \$000s). Number of Issuers should be provided in whole numbers and represents the number of bond issuers associated with the dollar amount of bonds expiring at that maturity date and rating.

(01)	Maturir		Maturing i		Maturing i		Maturing		Maturing i		Maturing i		123.5
	1 Year of Less		1 Year Through 3 Years		3 Years Through 5 Years		5 Years Through 10 Years		10 Years Through 20 Years		20 Years		Total

2015 Seminar on Reinsurance 01 June 2015 12

^{**}Row 19 Column 14 Total should match NAIC annual statement Schedule D Part 1A Section 1 Line 8.7 Column 6 (divided by 1000).

^{***}Row 21 Column 14 Total should match NAIC annual statement Schedule D Part 1A Section 1 Line 9.7 Column 6 (divided by 1000).

- Phase 1 Common Stock
 - Use Economic Scenario Generator
 - Update *common stock* risk factors
 - ü Reflect type of stocks held by company (SRQ Beta)
 - ü Reflect volatility (stochastic portion tied to ESG)
 - ü Can cap simulated downside risk
 - üLooked at TVaR metric
 - ü Currently looking at VaR metric

Common Stock Beta SRO Question:

I. ASSET SECTION (Continued)

3c.COMMON STOCK PORTFOLIO ANALYSIS: Please enter the "Beta" and the associated "R-Squared" of your company's publicly traded common stock portfolio as of December 31, 2013 (including publicly traded Parent, Subsidiary, and Affiliated common stock). The "Beta" represents the level of movement in the market value of common stocks owned relative to the stock market as a whole over a specified period of time. "R-Squared" measures how reliable the calculated "Beta" is.

The stock portfolio should be separated based upon the country of the exchange in which the stock is traded. If a stock is traded on exchanges in multiple countries, only include it in one of the countries. If the total market value of the common stocks that are traded in a particular country is less than 5% of the rating unit's total publicly traded common stock portfolio market value, then a response for that country is not required.

Please use the Aggregate Method to calculate the portfolio Beta based upon the specified index shown. The Aggregate Method portfolio Beta at year end is determined by a simple linear regression using 52 weeks of time weighted rates of return for the entire portfolio. When using the value of the publicly traded common stock portfolio in the calculation of the Beta, do not include the effects of any hedging on the portfolio. For companies that do not want the administrative expense of calculating the portfolio Beta, please enter a Beta of 1.50 and R-Squared of 1.00 along with the market value of the common stocks in that portfolio.

Publicly Traded Common Stocks

(01)	(02)	(03)	(04)	(05)
Location of Domestic Exchange on which Common Stocks are Traded	Market Value @12/31/2013 (in \$000s)	Beta	R-Squared	Index Used to Calculate Beta & R-Squared
United States of America		100		S&P 500
2. Canada			52	S&P/TSX Composite
3. United Kingdom				FT All Shares
4. Japan			(c)	TOPIX
5. Other (please specify)				Please specify:
6. Other (please specify)			*	Please specify:
7. Other (please specify)				Please specify:
8. TOTAL (Lines 1 through 7)		XXX	xxx	xxx

- Phase 1 Reinsurance
 - Update *reinsurance credit* risk factors
 - ü Reflect type of recoverable (paid, unpaid, upr)
 - ü Reflect rating of each reinsurer (Schedule F and ratings data)
 - ü Reflect concentration risk (how many reinsurers)
 - ü Reflect duration of recoverables (out to 30 years)
 - ü Reflect partial recovery when reinsurer impairment occurs
 - ü Simulate 10,000 impairment scenarios for each reinsurer
 - ü Only uses impairments occurring in first 10 years
 - ü Sums up entire amount of recovs associated with that impairment
 - ü (i.e. if impairment in year 1, and recovs collected over 30 years, then all 30 years of recovs counted in that impairment)
 - ü Amounts are present valued
 - ü Looked at TVaR metric
 - ü Currently looking at VaR metric

- Phase 1 PC Premium
 - Update PC premium risk factors
 - ü Create Industry UW Loss probability curves
 - 21 Schedule P lines and 4 NPW size categories (VS,S,M,L)
 - 84 industry probability curves for premiums
 - ü Use company's NPW size (by line) to select industry probability curve
 - use company profitability (by line) to adjust curve
 - ü Simulate 10,000 UW profit/loss scenarios for each line
 - i Reflect diversification across lines
 - use one of 4 industry correlation matrices
 - based on size of company's total NPW (VS,S,M,L)
 - ü Looked at risk factors based on TVaR metric
 - ü Currently looking at VaR metric

- Phase 1 PC Reserves
 - Update PC reserve risk Factors
 - ü Create industry unanticipated adverse development probability curves
 - 21 Schedule P lines and 4 reserve size categories (VS,S,M,L)
 - 84 industry probability curves for reserves
 - ü Use company Reserve size (by line) to select industry probability curve
 - use company volatility (by line) to adjust curve
 - ü Simulate 10,000 reserve development scenarios for each line
 - ü Reflect diversification across lines
 - use one of 4 industry correlation matrices
 - based on size of company's total net reserves (VS,S,M,L)
 - ü Looked at risk factors based on TVaR metric
 - ü Currently looking at VaR metric

- Phase 1 Natural Catastrophe
 - Update *natural catastrophe* approach many questions:
 - ü Var or TVaR metric?
 - ü Occurrence vs. aggregate season?
 - ü Total all perils?
 - ü Currently different VaRs for EQ and Wind
 - ü Straight charge to PHS or add to NRC?
 - ü Confidence level?
 - ü Continue stress test approach?
 - **ü** Looked at TVaR Aggregate Season Total All Perils
 - U Most conservative view

- Phase 1 Natural Catastrophe
 - Update *natural catastrophe* approach –
 - Currently testing with:
 - ü Per Occurrence
 - ü Total all perils
 - ü Measured at various VaR levels
 - ü Risk added to Net Required Capital
 - ü Will continue stress test approach
 - ü Will stress higher VaR levels if concerned with tail risk
 - ü Reinstatement premium and Tax adjustments remain
 - ii Terrorism and other stress tests remain

Natural Catastrophe SRQ Question:

CATASTROPHE EXPOSURE (Cont.): (19a)

IV. OPERATIONS SECTION (Continued)

[&]quot;Reflects the impact of multiple events in a given year or season ""TVAR (Tall Value at Risk) or TCE (Tall Conditional Expectation)

Phase 2

- Remaining asset classes
- Life and annuity risks
 - ü Mortality
 - ü Longevity
 - ü Disintermediation
 - ü Product Guarantees
 - **ü** Long Term Care/Disability
- Change net required capital formula to correlation matrix approach (instead of the square root rule)

Proposed Structure – PC BCAR

BCAR Ratio = Adjusted Surplus / Net Required Capital

Adjusted Surplus (APHS)

Reported Surplus (PHS)

Equity Adjustments:

Unearned Premiums (DAC)

Equalization/Contingency Reserves

Loss Reserves

Assets

Debt Adjustments:

Surplus Notes

Debt Service Requirements

Other Adjustments:

Future Operating Losses

Potential Loss

Future Dividends

Goodwill

Other Intangible Assets

Minority Interests, etc.

Net Required Capital

Gross Required Capital (GRC):

(B1) Fixed Income Securities

(B2) Equity Securities

(B3) Interest Rate

(B4) Credit

(B5) Loss and LAE Reserves

(B6) Net Premiums Written

(B7) Off-Balance Sheet

(B8) Catastrophe Exposure

Covariance Adjustment

Net Required Capital (NRC)*

*NRC= SQRT [$(B1)^2+(B2)^2+(B3)^2+(0.5*B4)^2+[(0.5*B4)+B5)]^2+(B6)^2$] + B7 + B8

Example of Impact to PC Model

Current Calculation

APHS (ex Potential Cat Losses) = \$150M Potential cat Losses = \$30M NRC = \$80M

$$BCAR = \frac{(150-30)}{80} = \frac{120}{80} = 150$$

Planned Calculation

APHS (ex Potential Cat Losses) = \$150M Potential cat Losses = \$30M NRC = \$80M

$$BCAR = \frac{150}{(80+30)} = \frac{150}{110} = 136$$

Example of Impact to PC Model

Current Calculation

a. APHS	(excl Potential	Cat Losses) =
---------	-----------------	------------	-----

b. Potential Cat Losses =

c. Net Required Capital (excl Cat Losses) = BCAR = (a - b) / (c) =

150	M
-----	---

30 M

<u>80</u> M

150.0

136.4

157.9

Planned Calculation

- a. APHS (excl Potential Cat Losses) =
- b. Potential Cat Losses =
- c. Net Required Capital (excl Cat Losses) = BCAR = (a) / (b + c) =

<u>vak 98</u>	<u>vak 99</u>	<u>vak 99.5</u>	<u>vak 99.8</u>	<u>vak 99.9</u>

75	80	25	90	95 N/

120.0

107.1

Notes: APHS is the same at each confidence level.

Net Required Capital increases as confidence level increases.

96.8

o TVaR

- Issues with catastrophe losses and the impact of extreme tail events
- May go beyond what is needed from BCAR
- Not as well understood by management as initially thought
- Can't manage down those extreme tail events
- Management uses VaR

o <u>VaR</u>

- Can use VaR if we slide out farther into the tail
 - Higher confidence levels than those used for TVaR
- Show BCAR at various confidence levels

- Time Horizon for risk factors
 - Ultimate basis for:
 - Reserve Risk
 - Pricing Risk
 - Using a 10 year period for:
 - Bond defaults
 - Reinsurer impairments
 - Common stocks
 - One year
- Ratings are reviewed annually
 - Provides a reasonable perspective, but recognizes how BCAR fits into the overall rating analysis

o <u>Investments</u>

- Greater risk than previous considered, particularly in equities
- Bond charges are slightly higher on investment grade
- Impact on PC companies has been tested
 - Not material impact on most PC BCARs

		Average Risk Factors of Sample PC Companies					
	Current						
Asset Risk Factor for:	PC BCAR	<u>VaR 98</u>	<u>VaR 99</u>	VaR 99.5	<u>VaR 99.8</u>	<u>VaR 99.9</u>	
US Gov't	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%	
NAIC Class 1 Bonds	1.0%	1.2%	1.5%	1.7%	2.0%	2.4%	
NAIC Class 2 Bonds	2.0%	5.4%	6.2%	6.8%	7.5%	8.4%	
NAIC Class 3 Bonds	4.0%	10.0%	11.0%	11.8%	12.8%	13.7%	
NAIC Class 4 Bonds	4.5%	23.3%	24.7%	25.8%	27.0%	27.8%	
NAIC Class 5 Bonds	10.0%	37.6%	38.3%	38.9%	39.5%	39.9%	
NAIC Class 6 Bonds	<u>30.0%</u>	<u>45.5%</u>	<u>46.6%</u>	<u>47.5%</u>	<u>48.3%</u>	<u>49.2%</u>	
Total Bonds	1.0%	1.8%	2.1%	2.3%	2.7%	3.1%	
Publicly Traded Common Stocks	15.0%	33.9%	39.1%	43.8%	47.3%	48.3%	

Reinsurance

- Charges slightly higher than current BCAR depending on reinsurer and duration of liabilities
- Combination of discounting and no impairments beyond 10 years has reduced initial charges slightly
- PC Underwriting (Reserves and Premium)
 - Auto risk factors lower than current BCAR not surprised by this
 - WC, GL, MPL risk factors slightly higher than current BCAR

Next generation BCAR as an indication of current balance sheet strength...what do scores say about relative financial strength?

	98%	99%	99.5%
Company A	178 (A++)	111	83
Company B	178 (A++)	126	103
Company C	152 (A)	128	116

Catastrophe Exposure

- Model will highlight companies with limited tail coverage
 - Because we are looking at BCAR at VaR levels above 99%
 - Higher rated companies are expected to have more tail coverage

BCAR Guidelines

- Still being reviewed, will likely select a target for B+/bbb- level
- Still looking at how other guidelines will be displayed

Next Steps

- Continue to evaluate VaR based output (Life and Universal models)
- How should liquidity needs be considered
- Are there any unintended consequences
- Industry discussions
 - We have had a few, but we have more people to talk to
- Draft Methodology Criteria Procedure
 - Re-write of Property Casualty
 - Update to other areas (Life, Universal, Health, Canadian, Title)
 - Release of methodology updates will be staggered
 - Lengthy comment period

Expected Timeline

- Model being developed in phases
 - Phase 1 built testing internally with 2013 YE data
 - ü Parameters completed
 - ü Run BCARs (PC; LH; Universal) internally with 2014 YE data
 - ü Draft criteria expected to be released this summer for comment
 - ü We do anticipate sharing 2014 YE output with companies as draft criteria are released
 - Ü Time frames for final criteria release will be impacted by comments received on criteria, changes based on comments, & LH impact study
 - Likely roll-out for Phase 1 components will be 2Q 2016 for year-end 2015 financials
 - Phase 2 1 year after Phase 1 finalized

Thank You!
