

Thoughts on Data Quality, Advancements in Modeling

Brandie Andrews, CCM

Antitrust Notice

- The Casualty Actuarial Society is committed to adhering strictly to the letter and spirit of the antitrust laws. Seminars conducted under the auspices of the CAS are designed solely to provide a forum for the expression of various points of view on topics described in the programs or agendas for such meetings.
- Under no circumstances shall CAS seminars be used as a means for competing companies or firms to reach any understanding – expressed or implied – that restricts competition or in any way impairs the ability of members to exercise independent business judgment regarding matters affecting competition.
- It is the responsibility of all seminar participants to be aware of antitrust regulations, to prevent any written or verbal discussions that appear to violate these laws, and to adhere in every respect to the CAS antitrust compliance policy.

Data for Models

Science of Risk Analysis

Exposure Data

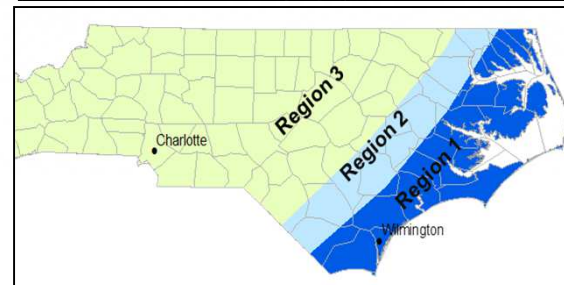

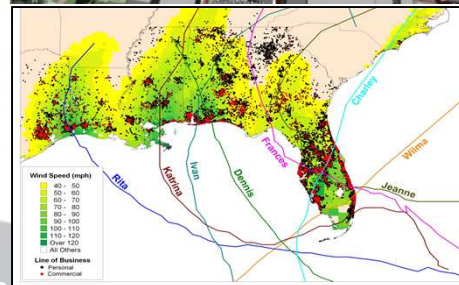

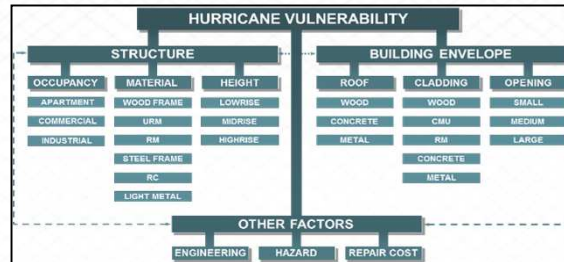

Validation

Science and Engineering

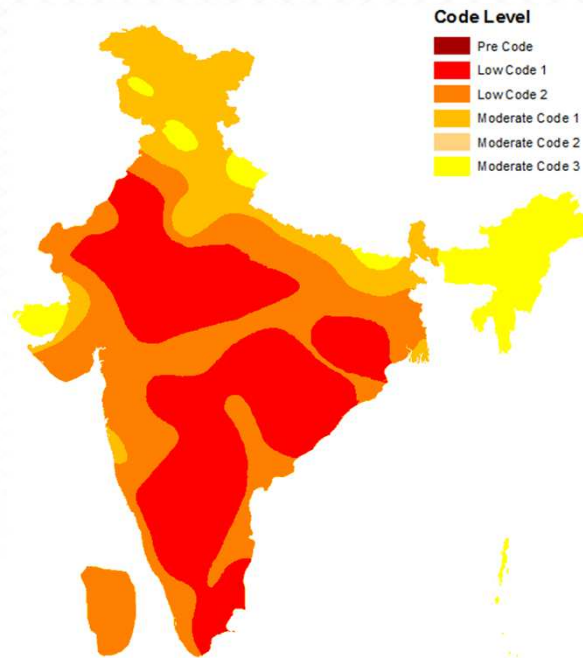

Dependable Vulnerability Module Requires Many Data Sources

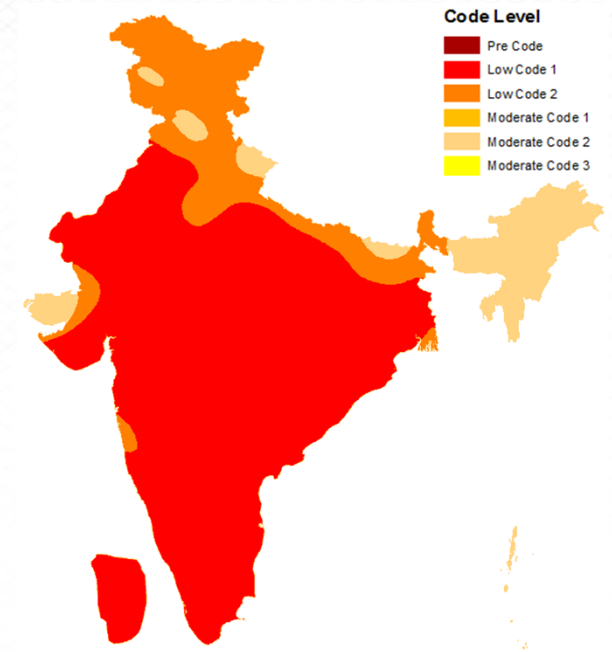

Detailed Study of the Building Code and Local Expert Feedback Are Important

IS 1893: 2002 Zones

AIR Theoretical Code Levels

AIR Final Code Levels
Considering Code Compliance

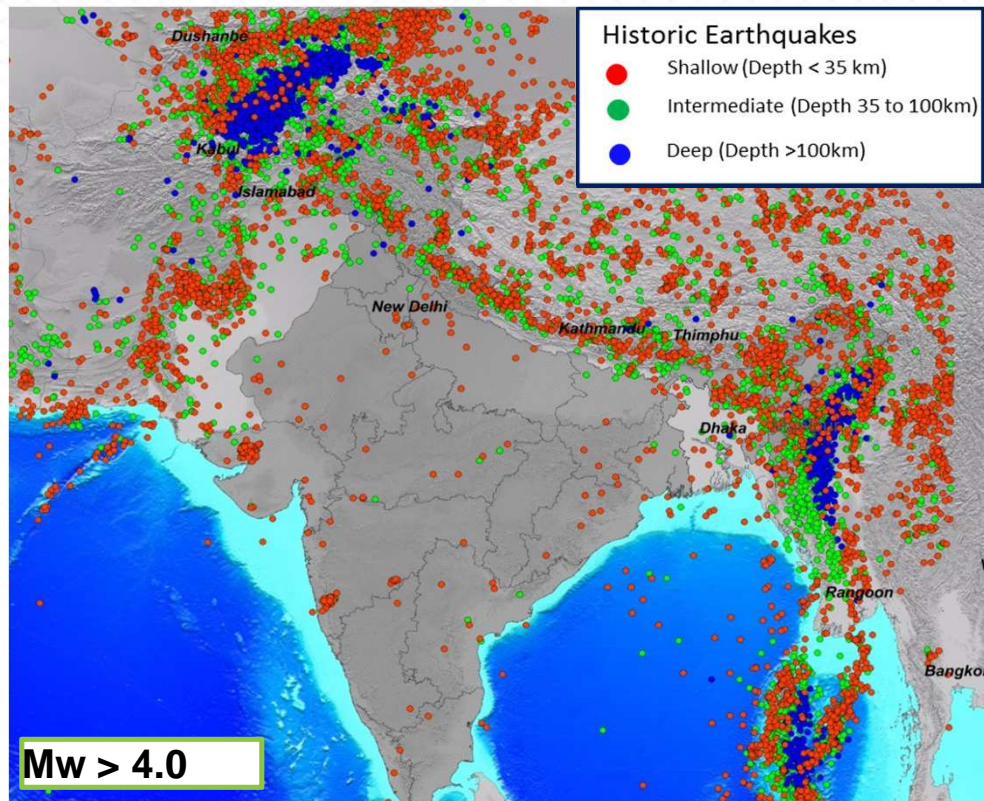

Even Good Data Can (and Should) Be Improved On

- AIR model incorporates comprehensive data from the NDMA and other important hazard studies
- Significant improvements
 - Historical catalog
 - Active fault model
 - GPS data
 - GMPE

Sometimes There's a Lot of Data! Historical Seismicity Data Dating Back to 1500

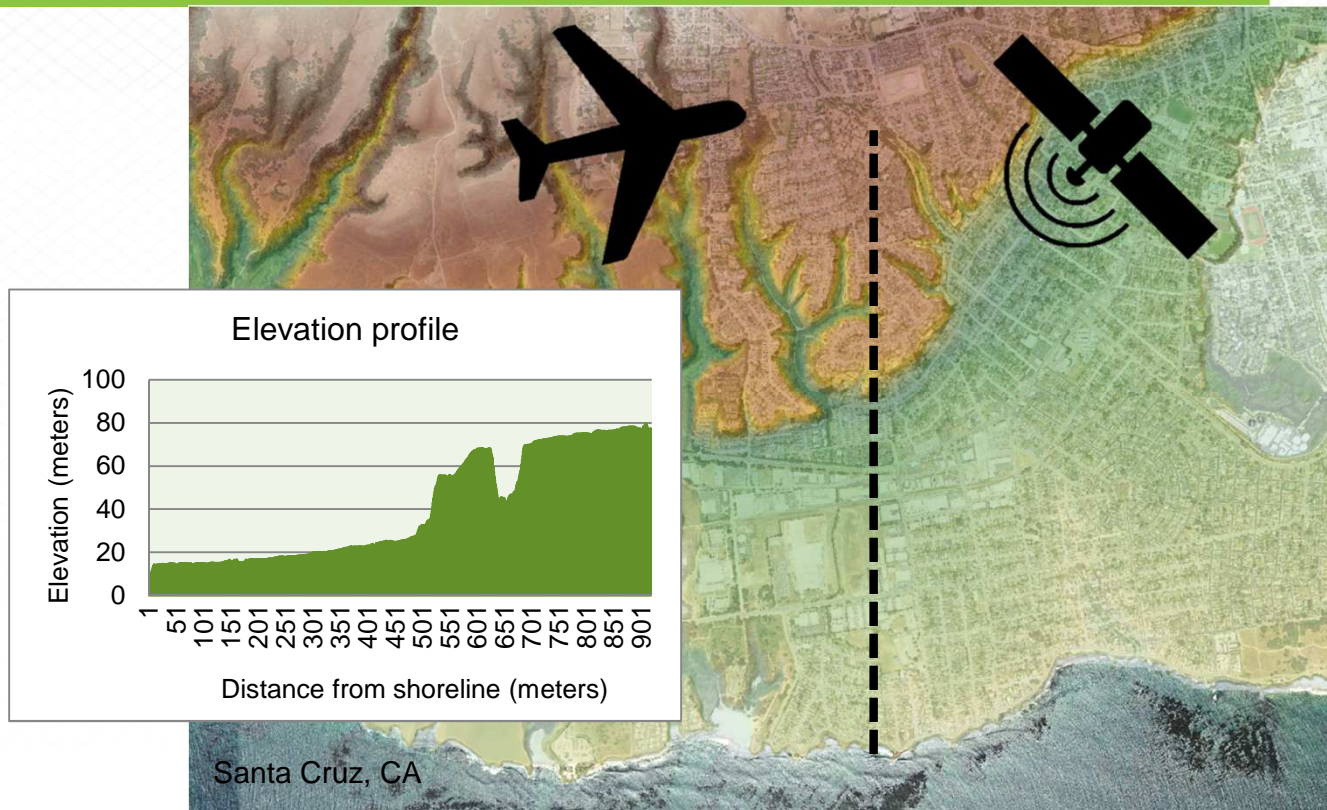

| Catalog | Years | Magnitude Scales |
|------------------|-----------|----------------------------------|
| GEM Instrumental | 1900–2009 | M_w (5.1–9.3) |
| GEM Historical | 1500–1903 | M_w (6.3–8.8) |
| ISC Bulletin | 1904–2009 | M_w , M_s , mb, ML (3.0–9.0) |
| GCMT | 1976–2014 | M_w (4.0–9.3) |
| USGS | 1900–2014 | M_w , M_s , mb (2.5–9.3) |
| IMD | 1819–2014 | M_s , mb, ML (2.5–9.3) |
| NDMA | 25–2008 | M_w (3.9–9.3) |

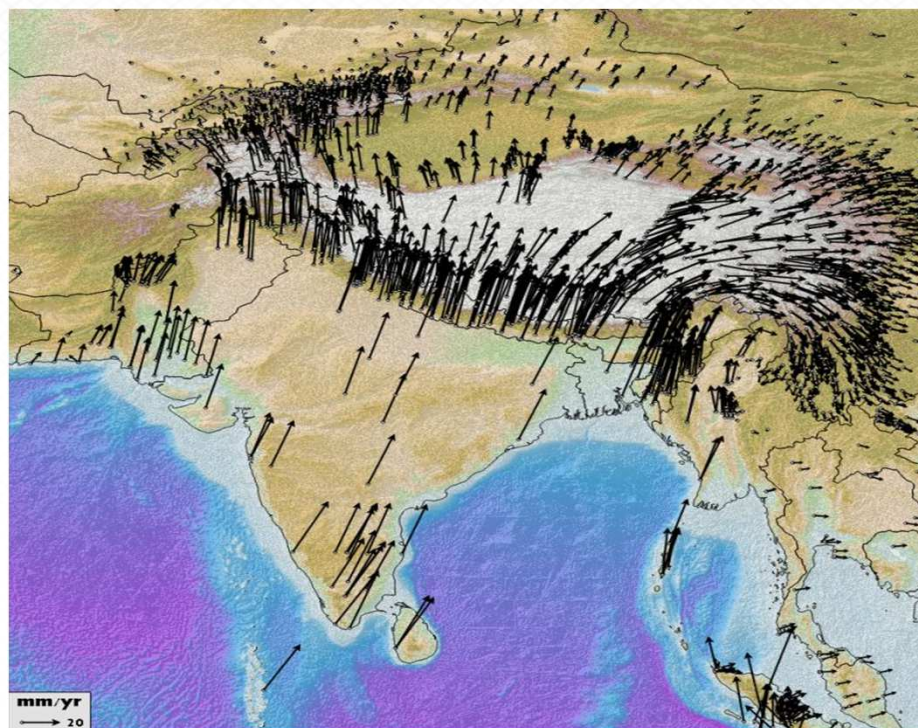

Data

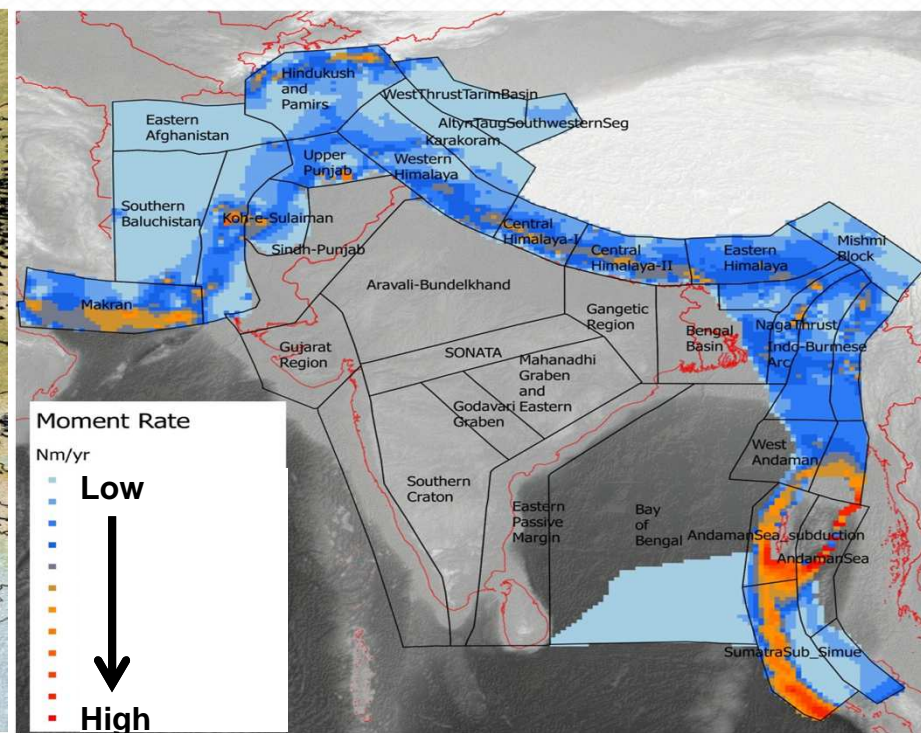

New Technologies Provide Unprecedented Levels of Data for Detailed Model Development

These New Data Improve Existing Modeling Methods

GPS Velocity Data

Seismic Moment Rate

Exposure Data

Geocoding Information in Important Cat Markets

Impact of Exposure Resolution on Modelling Results

| | Peril | AAL (\$B) | 500 Yr (\$B) |
|---|------------|-----------|--------------|
| Exact Location Data | Earthquake | 41.0 | 8,993.6 |
| Exact Location Data | Wind | 0.6 | 17.6 |
| Exact Location Data | Flood | 29.6 | 592.4 |
| Percent Change From Exact Location Data: | | | |
| | Peril | AAL | 500 Yr |
| Postcode Data | Earthquake | 2% | 3% |
| Postcode Data | Wind | 1% | 5% |
| Postcode Data | Flood | -6% | -9% |
| | Peril | AAL | 500 Yr |
| District Level Data | Earthquake | 32% | 22% |
| District Level Data | Wind | 6% | 9% |
| District Level Data | Flood | 27% | 75% |
| | Peril | AAL | 500 Yr |
| Province Level Data | Earthquake | 82% | 28% |
| Province Level Data | Wind | -9% | -9% |
| Province Level Data | Flood | 56% | 133% |

High Quality Industry Exposure Databases Improve Quality of Model and Data Augmentation

Residential values per km²

Industrial Parks Are Incorporated from Satellite Imagery

A Realistic Value Distribution Can Avoid Over- or Under- Estimation of Losses

AAL based on Entrance Gate

AAL based on Grid Geocoding
