SERVE | ADD VALUE | INNOVATE

DMI OVERVIEW

DMI is the leading provider of cleansed and managed data solutions for the automotive industry.

18+ years of automotive data experience

Strategic division of

formerly ADP Dealer Services

Acquired **IntegraLink** in 2010

Directly provide data services for **every OEM in North America**

Leading aggregator of automotive data — **over 400 sources** (OEM, DMS, & Third-Party)

Manage data collection from nearly all U.S. and Canadian Dealerships — **more than 23,000 dealerships with over 140,000 data connections**

Significant investment in **people, processes, and infrastructure** to deliver enterprise class solutions

Leading innovation with industry proven **Enterprise Data platform**

DMI SOLUTIONS OVERVIEW

INFOIQ[®] SOLUTION ARCHITECTURE

IMPROVE – VEHICLE DATA

Data Standardization

Dealer free text ('slop') is converted into a standard set of expected ('strict') values. For vehicle inventory records alone, DMI manages over **2 million** slop-strict mappings to deliver normalized content our clients need to run their programs.

DMI manages over 2 million slop-strict mappings

"Slop"

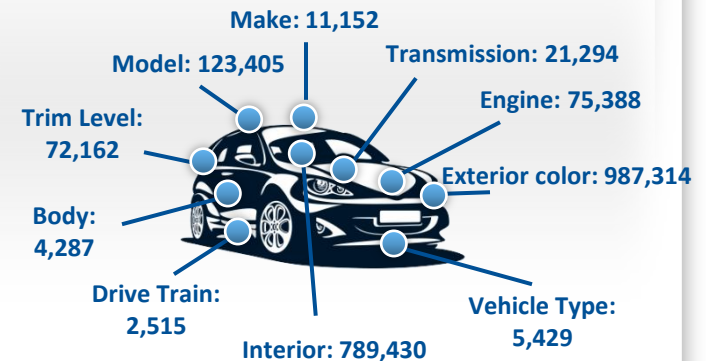

"Strict"

Data Mappings

DMI maps Vehicle Attributes, Standard Features, and Options. There are over **123,000** mappings to describe the vehicle attribute "model" alone.

Other attributes:

Mappings by vehicle attribute

Insurance Vehicle Reference Data

- Determining Insurance Rates
 - To determine the vehicle risk factor, the impact of Specific Vehicle Attributes needs to be assessed by evaluating:
 - Accident Frequency
 - Damage/Repair Costs
 - Liability
 - Personal Injury
 - Safety Ratings
 - In order to do this, Standard VIN decoders are used to determine the attributes of every vehicle

Decoding a VIN

“Correct data is essential for Insurers to properly price insurance policies, and it is an ongoing problem that some data is particularly hard to verify.” Bob U'Ren, VP Underwriting and Business Development Quality Planning Corp.

Generic VIN Decoding only gets you so far

- The problem is that the vehicle information provided by these data sources typically only includes a VIN or the results of a standard VIN decode
- Standard VIN Decodes are based on the first 8 + 10th and 11th characters of the VIN
- VIN Decoders are only able to determine the “standard” attributes of a vehicle and, depending on the vehicle, are often **NOT able to determine key attributes, such as engine, transmission or drivetrain.**
- **VIN Decoders are unable to identify the Specific OEM installed options and packages**

VIN digits	1	2	3	4-8	9	10	11	12-17
	Country	Manufacturer	Type	Details	Check digit	Year	Assembly plant	Production number

This is used, according to local regulations, to identify the vehicle type, and may include information on the [automobile platform](#) used, the model, and the [body style](#). Each manufacturer has a unique system for using this field.

Decoding a VIN

Take this VIN for example: [1FTFW1ETXDKF55579](#)

A standard decode reveals the following:

- Squish VIN = 1FTFW1ETDK
- Year, Make, Model = 2013 Ford F-150
- Unable to determine any of the following:
 - Trim – could be any of the following: XL, XLT, Limited, Lariat, FX4, King Ranch, Platinum
 - MSRP ranges from \$37,130 to \$53,300
 - Color: unknown
 - Options: unknown
- See [Window Sticker](#) example of this VIN, which includes \$6,375 worth of options

Feature Normalization

- Prioritizes and Categorize Features
- Standardizes Features across Manufacturers and Sources
- Enables Feature Analytics
- De-Dupes Features across Sources
- Identifies Specific Feature Characteristics such as:
 - Pre-Collision vs Post Collision
 - Active vs Passive Safety Systems
 - Warning vs Mitigation Safety Systems
 - Audible, Visual or Haptic Feedback

Make	Stability-Control System Name
Acura	Vehicle Stability Assist (VSA)
Audi	Electronic Stability Program (ESP)
BMW	Dynamic Stability Control (DSC)
Buick	StabiliTrak
Cadillac	StabiliTrak
Chevrolet	Active Handling (cars); StabiliTrak (SUVs)
Chrysler	Electronic Stability Program (ESP)
Dodge	Electronic Stability Program (ESP)
Ford	AdvanceTrac
GMC	StabiliTrak
Honda	Vehicle Stability Assist (VSA)
Hyundai	Electronic Stability Program (ESP)
Infiniti	Vehicle Dynamic Control (VDC)
Jaguar	Dynamic Stability Control (DSC)

Example: optional to mandatory

Percentage of Vehicles with Electronic Stability Control, by Calendar Year

Comparing approaches

	Experience	Attribute
Speed	Trailing indicators	Leading indicators
Granularity	Reliant on MSRP w/in series	Trim level predictions
Objectivity	Intangibles and evolution	Defined set of attributes
Maintenance	Annual review	Resolution and remodeling
Accuracy	High at series level but limited within series	Limited for variations beyond modeled set of attributes

Example: vestigial organs

2014 Honda CR-V EX

Recap

- Non-traditional data sources significantly enhance models
- Symbol approaches must evolve to handle more dimensions of vehicle risk
- VIN decodes may not provide a complete picture
- Combining multiple modeling approaches can produce more accurate estimates
