AEB Progress

10 automakers equipped most of their 2018 vehicles with automatic emergency braking

IRIS News, March 13, 2019
<https://www.iris.com/en/press-releases/10-automakers-equip-most-of-their-2018-vehicles-with-automatic-emergency-braking>

- : >50% vehicles produced by 10 automakers from Sept. 2017 through Aug. 2018 were equipped with automatic emergency braking
- : Was <33% for the previous year
- : About a third of vehicles produced have other advanced capabilities like pedestrian detection
- : Toyota equipped 2.2 million (90%) of its vehicles with AEB
- : Nissan equipped 1.1 million (78%) of its vehicles with AEB
- : Honda equipped almost 1 million (61%) of its vehicles with AEB
- : Tesla equipped 100 percent of their vehicles with AEB
- : Mercedes-Benz equipped over 92% of their vehicles with AEB
- : Volvo also equipped over 92% of their vehicles with AEB
- : 8 manufacturers equipped AEB in less than 25% of its production

Gender Rating

Gender rating

Commissioner issues regulations prohibiting gender discrimination in automobile insurance rates.
New rule prohibits gender rating; promotes fairness and social equity
California Department of Insurance Press Release, 1/30/2019
<http://www.insurance.ca.gov/0500/news/0500-press-releases/0500-2019/0500-2019-002-33.htm>

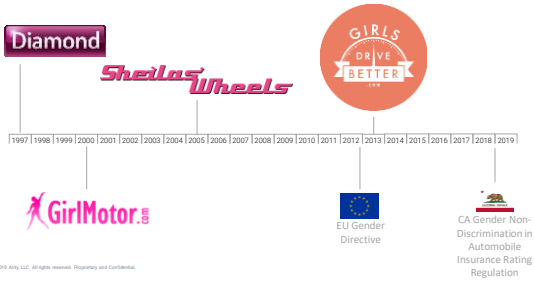

Gender can no longer be used to calculate auto insurance rates in California and other states
As rates go higher, insurers have other ways to calculate risk, including the monitoring of driving behavior.

Washington Post, By Fredrick Kunkin, February 11, 2019
<https://www.washingtonpost.com/news/energy-environment/wp/2019/02/11/gender-is-not-no-longer-the-sole-factor-in-california-auto-insurance-rates-but-california-is-not-alone/>

© 2019 Arly LLC. All rights reserved. Proprietary and Confidential.

- : The Gender Non-Discrimination in Automobile Insurance Rating Regulation became effective 1/1/2019.
- : Commissioner Jones has previously taken steps to prohibit and prevent denial of coverage or claims for medical services based upon actual or perceived gender identity.
- : Likely to result in lower premiums for young male drivers at the expense of young female drivers.
- : Regulators are increasingly pressuring insurers to focus more on driving behaviors.

Pricing for Distracted Driving

Distracted Driving

Texting-While-Driving Bans and Motor Vehicle Crash-Related Emergency Department Visits in 16 US States: 2007-2014

New rule prohibits gender rating; promotes fairness and social equity

By Ana O. Fardham, Arman Akbar, and Marvellous A. Akbarin, 2012019
<http://aigpublications.org/doi/10.21083/AIGP.2013.204899>

- : Study finds that states with bans on texting while driving saw an average 4% reduction in emergency department visits after motor vehicle crashes
- : States that implemented primary bans on all drivers saw an 8% reduction in crash-related injuries.
- : Drivers of all ages saw reductions in the number of injuries following crashes.

Distracted Driving

Pricing Insurance to Reflect Distracted Driving Risk

Insurance companies are finally putting a price on the risk of distracted driving

Insurance Journal, by Kyle Brock, April 24, 2016
<http://www.insurancejournal.com/news/100/2016/04/24/131646.htm>

- : The percentage of losses attributed to distraction over the last several years has tripled, costing the industry an estimated \$9 billion annually.
- : Teenagers tend to drive distracted the most
- : Insurers are increasingly pricing for distracted driving

5 Steps to Understand Distracted Driving

Insurance Thought Leadership, by Kyle Schmidt, October 16, 2016
<http://www.insurancejournal.com/news/100/2016/10/16/131646.htm>

- : Traditional carriers are relying on MVR data to provide insights on mobile phone use while driving
- : Phone-based telematics is increasingly being used to identify this risk without reliance on police or MVR

Unsexy Actuaries Are 97.28892% Certain They Need Stronger Brand

Data Scientists

Unsexy Actuaries Are 97.28892% Certain They Need Stronger Brand

Bloomberg News. By Michael Sauts. November 30, 2018
<https://www.bloomberg.com/news/articles/2018-11-30/unsexy-actuaries-are-97-28892-certain-they-need-stronger-brand>

: Data scientists are increasingly performing work that would have been performed by actuaries ten years ago

"If a data scientist can do 60% of what we do and do it cheaper, that's a threat to us. We have to add value over what we do."

- William Forna, FSA, EA, MAAA, FCA

How do actuarial and data science skills converge at P&C (re)insurers?

PwC, March, 2018
<https://www.pwc.com/us/en/actuaries/publications/articles/when-actuaries-meet-data-science-0318.pdf>

: With more sophisticated automated and data driven rating processes, and a rise in on-demand insurance products, data scientists will have an increased role in rate development by 2030.

Data Scientists

Actuaries Have Many Roles To Play in a Changing World

Actuarial Review. By Louise Mahoney. January 7, 2019
<http://www.actuarialreview.com/actuaries-have-many-roles-to-play-in-a-changing-world/>

: Actuarial science is a profession. Data science is not.

"Data scientists can struggle to get the actual data science to work because they don't understand the business problem. Actuaries make strong data scientists because of that."

- Shane Barnes, FCAS, CSPA

"Stop seeing threats as threats ... and start seeing threats as opportunities. Insurance is going to evolve to be more tech-savvy. Actuaries can be at the forefront of that."

- Anita Sathie, FCAS

Use of Social Media Data For Pricing

Pricing with Social Media

New York Insurers can Evaluate Your Social Media Use—If They Can Prove Why Its Needed

Wall Street Journal. By Leslie Scism, January 30, 2019
<https://www.wsj.com/articles/new-york-insurers-can-evaluate-your-social-media-use-if-they-can-prove-why-its-needed-1154646666>

- : NY regulator to allow life insurers to use data from social media and other nontraditional sources when setting premium rates
- : Insurers will have to prove the information doesn't unfairly discriminate against certain customers
- : Life insurers will have to show that the algorithms and data are free of bias against racial minorities and other protected groups.
- : Insurers can't just rely on an outside vendor's claim that its process is fair

Introduction to Telematics-based Pricing

What is telematics?

- : The **science** of sending, receiving and storing **information via telecommunication** devices
- : An **interdisciplinary** field that encompasses telecommunications, **vehicular technologies**, road transportation, road safety, and computer science
- : The branch of **information technology** that deals with the long-distance **transmission** of computerized **information**

© 2019 Allstate. All rights reserved. Proprietary and Confidential.

What does telematics mean to most insurance companies?

<p>Enhanced pricing</p> <p>Incorporates observed driving behavior directly in premium</p>	<p>Loss prevention</p> <p>Encourage or reward safe driving to reduce frequency and severity</p>	<p>Claims enhancements</p> <p>Improved operations from FNOI through settlement including fraud detection</p>	<p>Ancillary services</p> <p>Vehicle recovery, roadside assistance, emergency call after collision, engagement</p>
--	--	---	---

© 2019 Allstate. All rights reserved. Proprietary and Confidential.

What does telematics mean to insureds?

<p>Personalized pricing</p> <p>Confidence and controllability in coverages and price</p>	<p>Enhanced safety</p> <p>Identify safe and efficient routes</p>	<p>Vehicle insights</p> <p>Insureds informed about their vehicle health</p>	<p>Accident detection</p> <p>Receive immediate assistance at the time of incident</p>
---	---	--	--

Generate telematics data: Auto Insurance Version

OBD-II Device	Embedded systems	Smartphone
Access to car's diagnostic and controller data, axis-aligned data	Most comprehensive source of vehicle systems and diagnostic information	Cost-effective, quantifies user behaviors, facilitates customer interaction, scalable, ubiquitous
PROS:	Reliance on OEMs, scalability relies on multiple partnerships, slow to proliferate	No direct access to car's data, limited battery charge
CONS:		
Expensive, no access to phone distractions or other user behaviors, some people require help installing		

© 2018 Aflac LLC. All rights reserved. Proprietary and Confidential.

Relevant smartphone sensors

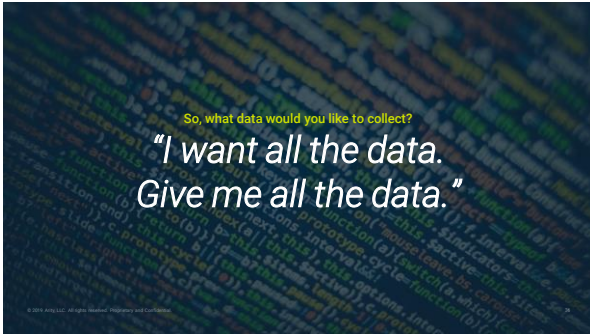

- Gyroscope: orientation and angular velocity
- Magnetometer: orientation relative to magnetic north
- GPS: location and time
- Accelerometer: rate and change of velocity
- Camera: observe road or driver
- Bluetooth: connect to other devices

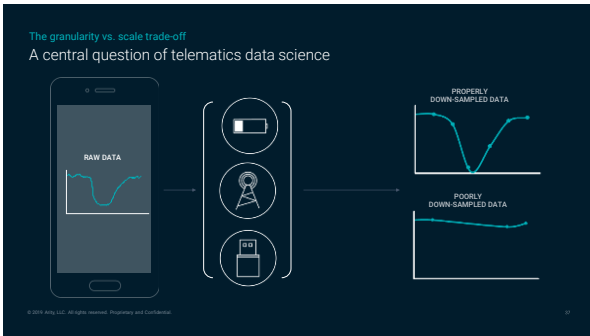

© 2018 Aflac LLC. All rights reserved. Proprietary and Confidential.

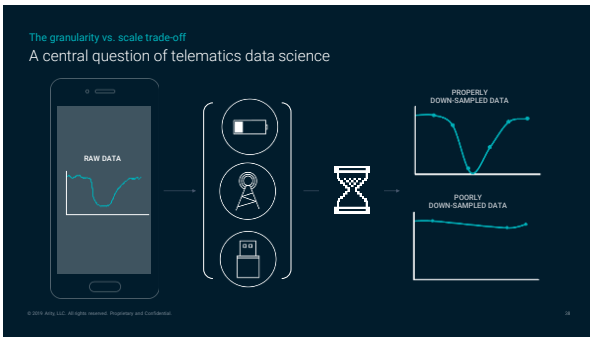

Embedded Telematics Systems

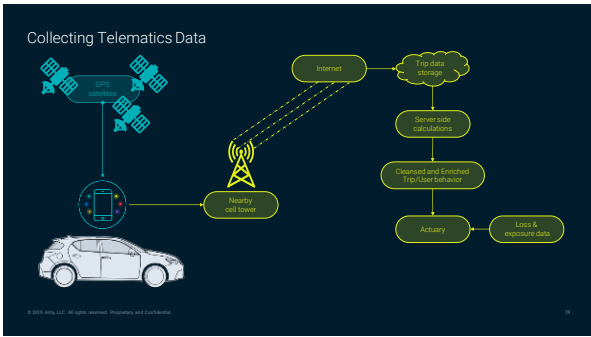

- Odometer
- Speedometer
- Brake pedal pressure
- Airbag control unit
- Steering angle
- Turn signal status
- Seat belt status
- "Check engine" light
- Cruise control status
- Trip fuel consumption

© 2018 Aflac LLC. All rights reserved. Proprietary and Confidential.

What data to collect and send?

Turn the question around...

What features should be tested for inclusion in a model?

© 2015 Allstate. All rights reserved. Proprietary and Confidential.

Creating telematics features

Popularity of telematics variables

Common	Less common	Not common
: Braking	: Distracted driving	: Idle time
: Time of day	: Location	: Trip distance
: Speed	: Cornering/turns	: Fatigue
: Miles driven	: Trip duration	: Trip regularity
: Accelerations	: Road type	: Left vs. right turn
	: Trip count	
	: Weather	

© 2019 Intel LLC. All rights reserved. Proprietary and Confidential.

41

Time of Day example

- Data to collect
- : Date
 - : Time stamps
 - : Exposure - miles driven or hours driven?

- Complication
- : What happens when crossing time zone?
 - : Daylight saving time changes to standard time

Braking example

- Data to collect
- : High frequency accelerometer or GPS data
 - : Speed

- Complications
- : Data must be high frequency to identify braking behavior
 - : If leveraging GPS, need to deal with gaps and bounces
 - : Need to avoid false positives like phone falling or tossing

© 2019 Intel LLC. All rights reserved. Proprietary and Confidential.

42

Other data to collect

External data

- : Accident incidences
- : Roads types (highway/local, urban/rural, etc)
- : Weather
- : Traffic congestion

Internal data

- : Loss, exposure, and other pricing information

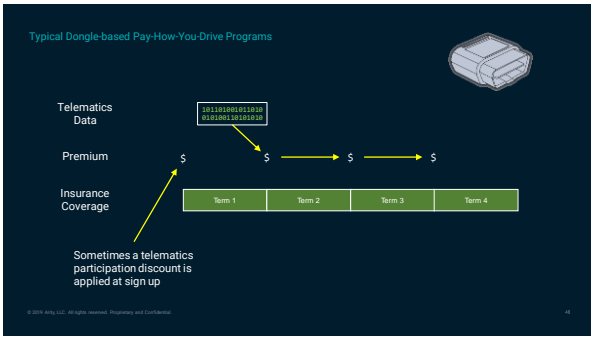

© 2019 Allstate. All rights reserved. Proprietary and Confidential.

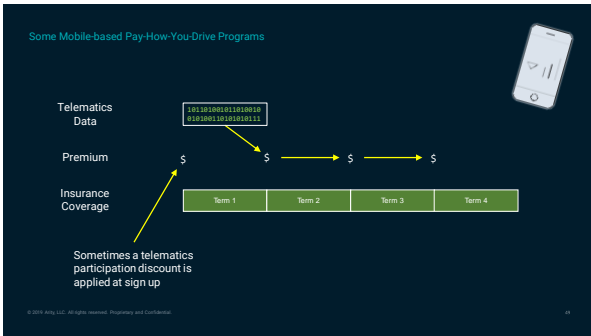

Building a telematics model

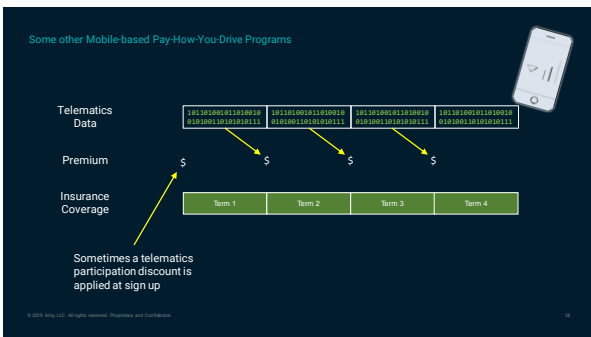

What kind of model to build?

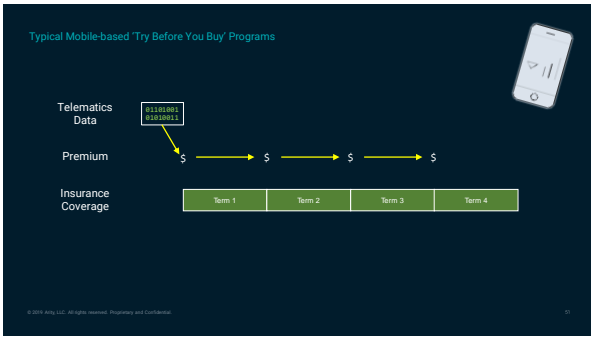

- : Behavior-based insurance
- : Distance-based insurance
- : Mile-based insurance
- : Mileage discount
- : Pay-As-You-Drive
- : Pay-As-You-Go
- : Pay-How-You-Drive
- : Pay per mile
- : Try before you buy
- : Usage-based insurance

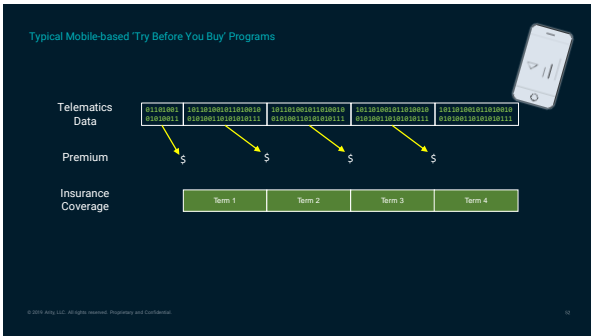

© 2019 Allstate. All rights reserved. Proprietary and Confidential.

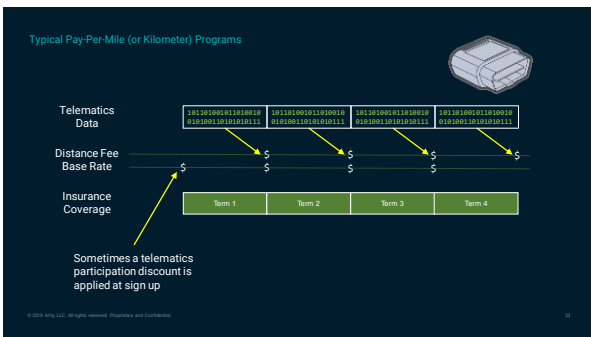

Some theories on why driving scores may significantly change

- Inexperienced drivers gaining experience
- Change in job
 - New commute route
 - New commute times
- Relocation
- Change in lifestyle
 - New baby
 - New significant other
 - New hobby
- Change in Car
- Drivers added to policy
- Drivers removed from policy
- Road construction
- Neurodegenerative and other diseases

© 2019 AIG, LLC. All rights reserved. Proprietary and Confidential.

Building a Telematics Model

Implementing telematics on top of existing rate plan

```

R
SAS
Spark
MLlib

cpgl=pure_prem - telem_var1 + telem_var2 + telem_var3,
link = "log",
weights= car_years,
offset = log_trad_1c )

proc genmod;
model pure_prem = telem_var1 telem_var2 telem_var3 /
dist=gweidie
link=log
offset=log_trad_1c;
weight car_years;
run;

glm = GeneralizedLinearRegression(
family= "weidie", linkPower=0, variancePower= "varpwr",
featuresCol= "feature_trad_vars",
labelCol= "pure_prem",
weightCol= "car_years",
offsetCol= "log_trad_1c",
fitIntercept=true).fit(train_df)

```

Interaction between Telematics and Advanced driver-assistance systems

Telematic Reaction to Automatic Emergency Braking

Did the driver or car hit the brakes?

- : Mobile telematics cannot determine.
- : OBD2 devices may be able to determine.

Does it matter who hit the brakes?

- : The combined performance (vehicle and operator) determines the occurrence.
- : AEB (forward or rear) should significantly lower costs.

© 2015 Axiety LLC. All rights reserved. Proprietary and Confidential.

18

Telematic Reaction to Automatic Emergency Braking

Should rates be raised or lowered for braking?

- Defective hardware or software is the manufacturer's liability
- Negligent driver's premiums should be increased
- Safe driving includes keeping a proper distance from objects in front of your vehicle.
- Failing to leave a proper distance from objects in front of your vehicle should result in higher premiums

© 2015 Axiety LLC. All rights reserved. Proprietary and Confidential.

19

Closing remarks

What we've learned

- : Automakers continue to make vehicles smarter and safer.
- : Some regulators are increasingly pressuring insurers to focus more on driving behaviors.
- : Insurers are increasingly pricing for distracted driving.
- : Use of gender in auto pricing is banned in 7 states and the EU.
- : Telematics-based pricing provides a means to incorporate actual driving behavior into a rate plan.
