PPACA A Regulator's View

Mary D Miller FCAS, MAAA
Assistant Director, Product Regulation &
Actuarial Services
CAS Spring Meeting May 16, 2011

Discussion Topics

- HHS Regulations, then and now
- Response of Health Regulatory Actuaries
- NAIC Solvency Impact Subgroup and MLR
- ▶ Rate Review Grants Cycle 1
- NAIC and SERFF
- ▶ High Risk Pool
- Exchanges
- Current Events

Some Significant Dates

- January 15, 2010 ODI Health Actuary Leaves
- ▶ 3/23/10 PPACA Enacted Confusion Reigns
- ▶ 7/1/10 Rate Review Grant Application Due
- ▶ 8/9/10 Grants Awarded
- ▶ 8/16/10 ODI Hires Health Actuary
- ▶ 9/1/10 High Risk Pools Begin Operation
- > 2/24/11- Cycle 2 Grant Rules Released

HHS Regulations

- Initial proposals incompatible with state regulatory practices
- Displayed willingness to be flexible and to learn from states how best to implement
- Wanted large volumes of information and data from both states and companies
- Focus on transparency for consumers

HHS Regulations

- Working with states to modify requirements based on states' knowledge and experience
- Looking to NAIC for advice on MLR, rate review requirements, and commissions
- What is an 'unreasonable rate increase request?'
- Rate Disclosure Forms

Health Regulatory Actuaries

- Went through legislation and identified issues to be resolved
- Identified over 70 issues
- Created issue working groups to make recommendations
- Contentious items included credibility adjustment factor confidence level

NAIC Solvency Impact Subgroup

- Focused on rules for reporting compliance with PPACA rather than its solvency impact
- Produced supplemental blank for reporting
- Many contentious items including activities to improve healthcare quality and fraud prevention activities
- First submission due April 1

Medical Loss Ratio(MLR)

- Clinical services and quality initiatives
- Individual and small group markets 80%
- Large group markets 85%
- Rebates required if minimums not met
- Arguments over what gets included in calculation and what is excluded
- Agent/broker commissions are the current hot topic

Rate Review Grant - Cycle 1

- States could apply for \$1 million to initiate or improve their rate review processes
- Cannot replace current expenditures
- Some states had no authority to regulate rates at all, some like Ohio have authority to review all
- Money for 1 year with rules to come in 4th quarter of 2010 for subsequent cycles

NAIC and SERFF

- > SERFF used by 49 states
- Decision to enhance SERFF to capture data from filings required for PPACA compliance
- States commit part of their Cycle 1 grant to build reporting system – HHS agrees to delay reporting requirements until system is built

High Risk Pools

- States decide to create temporary pools with federal funds to last until PPACA goes into effect in 2014
- State can run themselves, designate a nonprofit to run it, or default to let federal government run it.
- Even with subsidies, rates are high, though lower than open market

Health Exchanges

- States could apply for grants for feasibility studies
- Political events become more prominent, i.e individual mandate
- Rates must be the same in the exchange as they are outside the exchange
- States can run; non-profit can run; if neither, the federal government will run
- Role of agents/brokers vs. navigators

| N-U | 116 | HIL. | EVE | 111.5 |

- Rate Disclosure Forms
- What is an unreasonable rate increase?
- Role of RBC in rate review?
- Cycle 2 and beyond
- Court decisions
- Agent Commissions
- Rebate calculations

Observations

- Health rates have similar characteristics to P&C rates
- High premium to surplus ratios 6:1 is not uncommon
- ▶ 5% profit and contingencies provision can be 30% of surplus
- Less data mining
- Fixed and variable expense provisions
